Cash paid during the year for:		
Interest	\$-	\$-
Taxes	\$15,000	\$378,500

## Supplemental disclosures of non-cash transactions:

Under our agreement with Auxilium certain patent costs paid by Auxilium on behalf of the Company are creditable against future royalties. For the three month period ended March 31, 2014, we accrued approximately \$151,000 related to certain patent costs of which we amortized approximately \$45,000 in the 2014 period. For the three months ended March 31, 2013, we accrued approximately \$10,000 related to these costs of which approximately \$16,000 was amortized in the 2013 period.

BIOSPECIFICS TECHNOLOGIES CORP.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

March 31, 2014

(Unaudited)

1. ORGANIZATION AND DESCRIPTION OF BUSINESS

We are a biopharmaceutical company involved in the development of an injectable collagenase for multiple indications. We have a development and license agreement with Auxilium Pharmaceuticals, Inc. (“Auxilium”) for injectable collagenase (which Auxilium has named XIAFLEX<sup>®</sup>) for marketed indications and collagenase clostridium histolyticum (“CCH”) for indications in development. Auxilium has an option to acquire additional indications that we may pursue, including human and canine lipoma. Auxilium is currently selling XIAFLEX in the U.S. for the treatment of Dupuytren’s contracture and Peyronie’s disease. Following the termination of the agreement between Auxilium and Pfizer, Inc. (“Pfizer”), Auxilium entered into an agreement with Swedish Orphan Biovitrum AB (“Sobi”) pursuant to which Sobi has marketing rights for XIAPEX<sup>®</sup> (the EU trade name for collagenase clostridium histolyticum) for Dupuytren’s contracture and Peyronie’s disease in Europe and certain Eurasian countries. Sobi is currently selling XIAPEX in Europe for the treatment of Dupuytren’s contracture. In addition, Auxilium has an agreement with Asahi Kasei Pharma Corporation (“Asahi”) pursuant to which Asahi has the right to commercialize XIAFLEX for the treatment of Dupuytren’s contracture and Peyronie’s disease in Japan. Auxilium also has an agreement with Actelion Pharmaceuticals Ltd. (“Actelion”) pursuant to which Actelion has the right to commercialize XIAFLEX for the treatment of Dupuytren’s contracture and Peyronie’s disease in Canada, Australia, Brazil and Mexico.

Operational Highlights

On January 8, 2014, we announced top-line data from the phase II dose escalation clinical trial of CCH for the treatment of human lipoma. The primary efficacy outcome of active reduction of the visible surface area of the lipoma as measured by caliper was met, combining all patients ( $p < 0.0001$ ). There were no serious adverse events reported during the trial.

In January 2014, our partner Auxilium launched XIAFLEX, the first and only proven safe and effective FDA-approved treatment for Peyronie’s disease in men with a palpable plaque and a curvature deformity of  $>30^\circ$  at the start of therapy. Peyronie’s disease can be a devastating disease for patients and their partners and is estimated to be prevalent in 3-9% of adult men.

On February 24, 2014, Auxilium announced that the FDA accepted their submission of a supplemental Biologics License Application (“sBLA”) requesting approval of XIAFLEX for the treatment of two Dupuytren’s contracture cords concurrently. The PDUFA date for the sBLA filing is October 20, 2014.

On April 7, 2014, our partner Auxilium and Sobi announced that Sobi became the Market Authorisation Holder (MAH) for XIAPEX in 28 EU member countries, Norway, and Iceland on April 3, 2014. As the MAH, Sobi has now elected to file for market authorization for XIAPEX for the treatment of Peyronie’s disease and work is on-going for that filing in the EU.

On April 14, 2014, our partner Auxilium and Sobi announced that encore data were presented from multiple clinical trials evaluating the use of XIAFLEX /XIAPEX in adult patients with Peyronie’s disease. These data were presented at the 29th Annual European Association of Urology (EAU) Congress held April 11-15, 2014 in Stockholm, Sweden.

2. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

Basis of Presentation

The accompanying consolidated financial statements are unaudited, but include all adjustments (consisting only of normal, recurring adjustments) which we consider necessary for a fair presentation of our financial position at such dates and the operating results and cash flows for those periods. Although we believe that the disclosures in our financial statements are adequate to make the information presented not misleading, certain information normally included in financial statements prepared in accordance with U.S. generally accepted accounting principles (“U.S. GAAP”) has been condensed or omitted pursuant to the rules and regulations of the Securities and Exchange Commission (the “SEC”) for quarterly reporting.

6

---

## Table of Contents

The information included in this Report should be read in conjunction with our Annual Report on Form 10-K for the year ended December 31, 2013 filed with the SEC.

### Principles of Consolidation

The audited consolidated financial statements include the accounts of the Company and its subsidiary, Advance Biofactures Corp. (“ABC-NY”).

### Critical Accounting Policies, Estimates and Assumptions

The preparation of consolidated financial statements in conformity with U.S. GAAP requires the use of management’s estimates and assumptions that affect the amounts reported in the consolidated financial statements and accompanying notes. Actual results could differ from those estimates.

### Cash, Cash Equivalents and Short-term Investments

Cash, cash equivalents and short-term investments are stated at market value. Cash equivalents include only securities having a maturity of three months or less at the time of purchase. The Company limits its credit risk associated with cash, cash equivalents and short-term investments by placing its investments with banks it believes are highly creditworthy and with highly rated money market funds, and U.S. government securities.

### Fair Value Measurements

Management believes that the carrying amounts of the Company’s financial instruments, including cash, cash equivalents, short-term investments, accounts receivable, accounts payable and accrued expenses approximate fair value due to the short-term nature of those instruments.

### Concentration of Credit Risk and Major Customers

The Company maintains bank account balances, which, at times, may exceed insured limits. The Company has not experienced any losses with these accounts and believes that it is not exposed to any significant credit risk on cash.

The Company maintains its investment in FDIC insured certificates of deposits with several banks.

At March 31, 2014, the accounts receivable balance of \$1.9 million was from one customer, Auxilium.

The Company is dependent on one customer who generates almost all its revenues. In the quarter ended March 31, 2014, the licensing and royalty revenues from Auxilium were \$2.7 million.

### Revenue Recognition

We currently recognize revenues resulting from product sales, the licensing and sublicensing of the use of our technology and from services we sometimes perform in connection with the licensed technology under the guidance of Accounting Standards Codification 605, Revenue Recognition (“ASC 605”).

If we determine that separate elements exist in a revenue arrangement under ASC 605, we recognize revenue for delivered elements only when the fair values of undelivered elements are known, when the associated earnings process is complete, when payment is reasonably assured and, to the extent the milestone amount relates to our performance obligation, when our customer confirms that we have met the requirements under the terms of the agreement.

Revenues, and their respective treatment for financial reporting purposes, are as follows:

7

---

## Table of Contents

### Product Sales

We recognize revenue from product sales when there is persuasive evidence that an arrangement exists, title passes, the price is fixed or determinable and collectability is reasonably assured. No right of return exists for our products except in the case of damaged goods. To date, we have not experienced any significant returns of our products.

Net sales include the sales of the collagenase for laboratory use that are recognized at the time the product is shipped to customers for laboratory use.

### Royalty/ Mark-up on Cost of Goods Sold / Earn-Out Revenue

For those arrangements for which royalty, mark-up on cost of goods sold or earn-out payment information becomes available and collectability is reasonably assured, we recognize revenue during the applicable period earned. For interim quarterly reporting purposes, when collectability is reasonably assured but a reasonable estimate of royalty, mark-up on cost of goods sold or earn-out payment revenues cannot be made, the royalty, mark-up on cost of goods sold or earn-out payment revenues are generally recognized in the quarter that the applicable licensee provides the written report and related information to us.

Under the Auxilium Agreement, we do not participate in the selling, marketing or manufacturing of products for which we receive royalties and a mark-up on the cost of goods sold revenues. The royalty and mark-up on cost of goods sold revenues will generally be recognized in the quarter that Auxilium provides the written reports and related information to us, that is, royalty and mark-up on cost of goods sold revenues are generally recognized one quarter following the quarter in which the underlying sales by Auxilium occurred. The royalties payable by Auxilium to us are subject to set-off for certain patent costs.

Under the DFB Agreement, pursuant to which we sold our topical collagenase business to DFB, we had the right to receive earn-out payments based on sales of certain products. This right to receive payments on Santyl sales expired in August 2013. Generally, under the DFB Agreement we would receive payments and a report within ninety (90) days from the end of each calendar year after DFB had sold the royalty-bearing product. DFB provided us earn-out reports on a quarterly basis. In 2013, BioSpecifics recognized all income from the Santyl sales under the DFB agreement, and in March 2014 we received the corresponding cash payment for the income recognized in 2013.

### Licensing Revenue

We include revenue recognized from upfront licensing, sublicensing and milestone payments in "License Revenues" in our consolidated statements of operations in this Report.

### Upfront License and Sublicensing Fees

We generally recognize revenue from upfront licensing and sublicensing fees when the agreement is signed, we have completed the earnings process and we have no ongoing performance obligation with respect to the arrangement. Nonrefundable upfront technology license for product candidates for which we are providing continuing services related to product development are deferred and recognized as revenue over the development period.

### Milestones

Milestones, in the form of additional license fees, typically represent nonrefundable payments to be received in conjunction with the achievement of a specific event identified in the contract, such as completion of specified development activities and/or regulatory submissions and/or approvals. We believe that a milestone represents the culmination of a distinct earnings process when it is not associated with ongoing research, development or other

performance on our part. We recognize such milestones as revenue when they become due and collection is reasonably assured. When a milestone does not represent the culmination of a distinct earnings process, we recognize revenue in a manner similar to that of an upfront license fee.

The timing and amount of revenue that we recognize from licenses of technology, either from upfront fees or milestones where we are providing continuing services related to product development, is primarily dependent upon our estimates of the development period. We define the development period as the point from which research activities commence up to regulatory approval of either our, or our partners' submission assuming no further research is necessary. As product candidates move through the development process, it is necessary to revise these estimates to consider changes to the product development cycle, such as changes in the clinical development plan, regulatory requirements, or various other factors, many of which may be outside of our control. Should the FDA or other regulatory agencies require additional data or information, we would adjust our development period estimates accordingly. The impact on revenue of changes in our estimates and the timing thereof is recognized prospectively over the remaining estimated product development period.

8

---

## Table of Contents

### Treasury Stock

The Company accounts for treasury stock under the cost method and includes treasury stock as a component of stockholders' equity.

### Receivables, Deferred Revenue and Allowance for Doubtful Accounts

Trade accounts receivable are stated at the amount the Company expects to collect. We maintain allowances for doubtful accounts for estimated losses resulting from the inability of its customers to make required payments. We consider the following factors when determining the collectability of specific customer accounts: customer credit-worthiness, past transaction history with the customer, current economic industry trends, and changes in customer payment terms. Our accounts receivable balance is typically due from our one large pharmaceutical customer. This company has historically paid timely and has been a financially stable organization. Due to the nature of the accounts receivable balance, we believe the risk of doubtful accounts is minimal. If the financial condition of our customer were to deteriorate, adversely affecting its ability to make payments, additional allowances would be required. We provide for estimated uncollectible amounts through a charge to earnings and a credit to a valuation allowance. Balances that remain outstanding after we have used reasonable collection efforts are written off through a charge to the valuation allowance and a credit to accounts receivable.

At March 31, 2014, the accounts receivable balance of \$1.9 million was from one customer, Auxilium.

Deferred revenue of \$0.2 million consists of licensing fees related to the cash payments received under the Auxilium Agreement in prior years and amortized over the expected development period of certain indications for XIAFLEX.

We recorded no material bad debt expense for the period ended March 31, 2014. The allowance for doubtful accounts balance was approximately \$30,000 at March 31, 2014 and 2013.

### Reimbursable Third Party Development Costs

We estimate our accrual for patent expenses for research and development that are reimbursable by us under the Auxilium Agreement. We increased our reimbursable third party patent cost based on the most recent information provided to us by Auxilium for the period ended March 31, 2014. We capitalize certain patent costs related to estimated third party development costs that are reimbursable under the Auxilium Agreement. As of March 31, 2014, our net reimbursable third party patent cost was approximately \$192,000.

### Third Party Royalties

We have entered into licensing and royalty agreements with third parties and agreed to pay certain royalties on net sales of products for specific indications. We accrue third party royalty expenses on net sales reported to us by Auxilium. Third party royalty expense is generally expensed in the quarter that Auxilium provides the written reports and related information to us, that is, generally one quarter following the quarter in which the underlying sales by Auxilium occurred. We expect our third party royalty expense under General and Administrative expenses will continue to increase as net sales by Auxilium for XIAFLEX increase and potential new indications for CCH are approved.

### Royalty Buy-Down

On March 31, 2012, we entered into an amendment to our existing agreement with Dr. Martin K. Gelbard, dated August 27, 2008, related to our future royalty obligations for Peyronie's disease. The amendment enables us to buy down a portion of our future royalty obligations in exchange for an initial cash payment of \$1.5 million and five

additional cash payments, one of which was paid in December 2013.

9

---

### Table of Contents

As of March 31, 2014, we have capitalized \$3.35 million related to this agreement which will be amortized over approximately five years, beginning in the second quarter of 2014, which represents the period estimated to be benefited using the straight-line method. In accordance with Accounting Standards Codification 350, Intangibles, Goodwill and Other, the Company amortizes intangible assets with finite lives in a manner that reflects the pattern in which the economic benefits of the assets are consumed or otherwise used up. If that pattern cannot be reliably determined, the assets are amortized using the straight-line method. We perform an evaluation of the recoverability of the carrying value of our intangible assets to determine if facts and circumstances indicate that the carrying value of intangible assets may be impaired and if any adjustment is warranted. Based on our evaluation as of March 31, 2014, no impairment existed for intangible assets.

### Research and Development Expenses

Research and development (“R&D”) expenses include, but are not limited to, internal costs, such as salaries and benefits, costs of materials, lab expense, facility costs and overhead. R&D expenses also consist of third party costs, such as medical professional fees, product costs used in clinical trials, consulting fees and costs associated with clinical study arrangements. We may fund R&D at medical research institutions under agreements that are generally cancelable. All of these costs are charged to R&D as incurred, which may be measured by percentage of completion, contract milestones, patient enrollment, or the passage of time.

### Clinical Trial Expenses

Our cost accruals for clinical trials are based on estimates of the services received and efforts expended pursuant to contracts with various clinical trial centers and clinical research organizations. In the normal course of business we contract with third parties to perform various clinical trial activities in the ongoing development of potential drugs. The financial terms of these agreements are subject to negotiation and vary from contract to contract and may result in uneven payment flows. Payments under the contracts depend on factors such as the achievement of certain events, the successful enrollment of patients, the completion of portions of the clinical trial, or similar conditions. The objective of our accrual policy is to match the recording of expenses in our financial statements to the actual cost of services received and efforts expended. As such, expenses related to each patient enrolled in a clinical trial are recognized ratably beginning upon entry into the trial and over the course of the patient’s continued participation in the trial. In the event of early termination of a clinical trial, we accrue an amount based on our estimate of the remaining non-cancelable obligations associated with the winding down of the clinical trial. Our estimates and assumptions could differ significantly from the amounts that may actually be incurred.

### Stock-Based Compensation

The Company has two stock-based compensation plans in effect. Accounting Standards Codification 718, Compensation - Stock Compensation (“ASC 718”), requires the recognition of compensation expense, using a fair-value based method, for costs related to all share-based awards including stock options and common stock issued to our employees and directors under our stock plans. It requires companies to estimate the fair value of share-based awards on the date of grant using an option-pricing model. The value of the portion of the award that is ultimately expected to vest is recognized as expense on a straight-line basis over the requisite service periods in our consolidated statements of operations.

Under the ASC 718, we estimate the fair value of our employee stock awards at the date of grant using the Black-Scholes option-pricing model, which requires the use of certain subjective assumptions. The most significant of these assumptions are our estimates of the expected volatility of the market price of our stock and the expected term of an award. When establishing an estimate of the expected term of an award, we consider the vesting period for the award, our recent historical experience of employee stock option exercises (including forfeitures) and the expected volatility. When there is uncertainty in the factors used to determine the expected term of an award, we use the

simplified method. As required under the accounting rules, we review our valuation assumptions at each grant date and, as a result, our valuation assumptions used to value employee stock-based awards granted in future periods may change. No stock options were granted during the three month period ended March 31, 2014.

Further, ASC 718 requires that employee stock-based compensation costs be recognized over the requisite service period, or the vesting period, in a manner similar to all other forms of compensation paid to employees. The allocation of employee stock-based compensation costs to each operating expense line are estimated based on specific employee headcount information at each grant date and estimated stock option forfeiture rates and revised, if necessary, in future periods if actual employee headcount information or forfeitures differ materially from those estimates. As a result, the amount of employee stock-based compensation costs we recognize in each operating expense category in future periods may differ significantly from what we have recorded in the current period.

10

---

Table of Contents

Stock-based compensation expense recognized under ASC 718 was as follows:

	Three Months Ended March 31,	
	2014	2013
Research and development	\$-	\$13,200
General and administrative	5,354	13,200
Total stock-based compensation expense	\$5,354	\$26,400

## Stock Option Activity

A summary of our stock option activity during the three months ended March 31, 2014 is presented below:

Options	Total Number of Shares	Weighted-Average Exercise Price
Outstanding as of December 31, 2013	1,167,000	\$ 9.03
Granted	-	-
Forfeited	-	-
Exercised	(51,000 )	1.30
Expired	-	-
Outstanding as of March 31, 2014	1,116,000	\$ 9.38
Exercisable as of March 31, 2014	1,081,000	\$ 8.90

During the three months ended March 31, 2014 and 2013, \$66,100 and zero, respectively, were received from stock options exercised by option holders.

The aggregate intrinsic value of options outstanding and exercisable as of March 31, 2014 was approximately \$18.4 million. Aggregate intrinsic value represents the total pre-tax intrinsic value based on the closing price of our common stock of \$25.92 on March 31, 2014, which would have been received by the option holders had all option holders exercised their options as of that date. We have approximately \$74,000 in unrecognized compensation cost related to stock options outstanding as of March 31, 2014.

## Property, Plant and Equipment

Property, plant and equipment are stated at cost, less accumulated depreciation. Machinery and equipment, furniture and fixtures, and autos are depreciated on the straight-line basis over their estimated useful lives of 5 to 10 years. Leasehold improvements are amortized over the lesser of their estimated useful lives or the remaining life of the lease.

## Provision for Income Taxes

Deferred tax assets and liabilities are recognized based on the expected future tax consequences, using current tax rates, of temporary differences between the financial statement carrying amounts and the income tax basis of assets and liabilities. A valuation allowance is applied against any net deferred tax asset if, based on the weighted available evidence, it is more likely than not that some or all of the deferred tax assets will not be realized.

We use the asset and liability method of accounting for income taxes, as set forth in Accounting Standards Codification 740-10-25-2. Under this method, deferred income taxes, when required, are provided on the basis of the

difference between the financial reporting and income tax basis of assets and liabilities at the statutory rates enacted for future periods. In accordance with Accounting Standards Codification 740-10-45-25, Income Statement Classification of Interest and Penalties, we classify interest associated with income taxes under interest expense and tax penalties under other.

11

---

Table of Contents

## 3. NET INCOME (LOSS) PER SHARE

In accordance with Accounting Standards Codification 260, Earnings Per Share, basic net income (loss) per share amount is computed using the weighted-average number of shares of common stock outstanding during the periods presented, while diluted net income (loss) per share is computed using the sum of the weighted-average number of common and common equivalent shares outstanding. Common equivalent shares used in the computation of diluted earnings per share result from the assumed exercise of stock options using the converted method.

The following table summarizes the number of common equivalent shares that were included for the calculation of diluted net income purposes from continuing operations reported in the consolidated statement of operations.

	Three Months Ended March 31,	
	2014	2013
Stock options	643,313	598,498

## 4. COMPREHENSIVE INCOME (LOSS)

For the three months ended March 31, 2014 and 2013, we had no components of other comprehensive income or loss other than net income itself.

## 5. ACCOUNTS PAYABLE AND ACCRUED EXPENSES

Accounts payable and accrued expenses consisted of the following:

	March 31, 2014	December 31, 2013
Trade accounts payable and accrued expenses	\$551,189	\$409,617
Accrued legal and other professional fees	145,531	61,538
Accrued payroll and related costs	180,365	163,122
Total	\$877,085	\$634,277

## 6. PATENT COSTS

We amortize intangible assets with definite lives on a straight-line basis over their estimated useful lives, ranging from 1 to 13 years, and review for impairment on a quarterly basis and when events or changes in circumstances indicate that the carrying amount of such assets may not be recoverable.

For the three months ended March 31, 2014, we increased our capitalized patent costs by \$151,000 based on the most current information reported to us by Auxilium. As of March 31, 2014, the Company's estimated capitalized costs related to certain patent costs paid by Auxilium on behalf of the Company are approximately \$192,000, which are reimbursable to Auxilium under the Auxilium Agreement. These patent costs are creditable against future royalty revenues. For each period presented below net patent costs consisted of:

	December 31, 2013
March 31, 2014	

Edgar Filing: BIOSPECIFICS TECHNOLOGIES CORP - Form 10-Q

Patents	\$623,828	\$472,375
Accumulated Amortization	(301,221)	(256,376)
	\$322,607	\$215,999

12

---

### Table of Contents

The amortization expense for patents for the three months ended March 31, 2014 was approximately \$45,000. In the comparable period of 2013, the amortization expense for patents was approximately \$16,000. The estimated aggregate amortization expense for each of the next five years is approximately as follows:

2015	\$38,000
2016	32,000
2017	32,000
2018	32,000
2019	32,000

## 7. PROVISION FOR INCOME TAXES

In determining our provision for income taxes, we consider all available information, including operating results, ongoing tax planning, and forecasts of future taxable income. The significant components of the Company's deferred tax assets pursuant to Accounting Standards Codification 740-10-50 consist of stock-based compensation and deferred revenues. For the three month period ended March 31, 2014, the provision for income taxes was \$0.4 million. For the three month period ended March 31, 2014, the valuation allowance with respect to the Company's net deferred tax assets remained unchanged. As of March 31, 2014, our remaining deferred tax assets were approximately \$1.5 million.

For the three month period ended March 31, 2013, the provision for income taxes was \$0.7 million. For the three month period ended March 31, 2013, the valuation allowance with respect to the Company's net deferred tax assets remained unchanged. As of March 31, 2013, our remaining deferred tax assets were approximately \$1.6 million.

## 8. SUBSEQUENT EVENTS

We have evaluated subsequent events for recognition or disclosure through the time of filing these consolidated financial statements on Form 10-Q with the SEC on May 9, 2014.

### Item 2: Management's Discussion and Analysis of Financial Condition and Results of Operations

The following discussion should be read in conjunction with the consolidated financial statements and the related notes thereto included elsewhere in this Report and is qualified by reference to them.

#### Overview

We are a biopharmaceutical company involved in the development of an injectable collagenase for multiple indications. We have a development and license agreement with Auxilium Pharmaceuticals, Inc. ("Auxilium") for injectable collagenase (which Auxilium has named XIAFLEX<sup>®</sup>) for marketed indications and collagenase clostridium histolyticum ("CCH") for indications in development. Auxilium has an option to acquire additional indications that we may pursue, including human and canine lipoma. Auxilium is currently selling XIAFLEX in the U.S. for the treatment of Dupuytren's contracture and Peyronie's disease. Following the termination of the agreement between Auxilium and Pfizer, Inc. ("Pfizer"), Auxilium entered into an agreement with Swedish Orphan Biovitrum AB ("Sobi") pursuant to which Sobi has marketing rights for XIAPEX<sup>®</sup> (the EU trade name for collagenase clostridium histolyticum) for Dupuytren's contracture and Peyronie's disease in Europe and certain Eurasian countries. Sobi is currently selling XIAPEX in Europe for the treatment of Dupuytren's contracture. In addition, Auxilium has an agreement with Asahi Kasei Pharma Corporation ("Asahi") pursuant to which Asahi has the right to commercialize XIAFLEX for the treatment of Dupuytren's contracture and Peyronie's disease in Japan. Auxilium also has an agreement with Actelion Pharmaceuticals Ltd. ("Actelion") pursuant to which Actelion has the right to commercialize XIAFLEX for the treatment of Dupuytren's contracture and Peyronie's disease in Canada, Australia, Brazil and Mexico.

### Operational Highlights

On January 8, 2014, we announced top-line data from the phase II dose escalation clinical trial of CCH for the treatment of human lipoma. The primary efficacy outcome of active reduction of the visible surface area of the lipoma as measured by caliper was met, combining all patients ( $p < 0.0001$ ). There were no serious adverse events reported during the trial.

13

---

### Table of Contents

In January 2014, our partner Auxilium launched XIAFLEX, the first and only proven safe and effective FDA-approved treatment for Peyronie's disease in men with a palpable plaque and a curvature deformity of >30° at the start of therapy. Peyronie's disease can be a devastating disease for patients and their partners and is estimated to be prevalent in 3-9% of adult men.

On February 24, 2014, Auxilium announced that the FDA accepted their submission of a supplemental Biologics License Application ("sBLA") requesting approval of XIAFLEX for the treatment of two Dupuytren's contracture cords concurrently. The PDUFA date for the sBLA filing is October 20, 2014.

On April 7, 2014, our partner Auxilium and Sobi announced that Sobi became the Market Authorisation Holder (MAH) for XIAPEX in 28 EU member countries, Norway, and Iceland on April 3, 2014. As the MAH, Sobi has now elected to file for market authorization for XIAPEX for the treatment of Peyronie's disease and work is on-going for that filing in the EU.

On April 14, 2014, our partner Auxilium and Sobi announced that encore data were presented from multiple clinical trials evaluating the use of XIAFLEX /XIAPEX in adult patients with Peyronie's disease. These data were presented at the 29th Annual European Association of Urology (EAU) Congress held April 11-15, 2014 in Stockholm, Sweden.

### Outlook

For the quarter ended March 31, 2014, we generated revenue from one primary source: in connection with the Auxilium Agreement. Under the Auxilium Agreement, we receive license, sublicense income, royalties, milestones and mark-up on cost of goods sold payments related to the sale and approval of XIAFLEX as described above.

### Significant Risks

We are dependent to a significant extent on third parties, and our principal licensee, Auxilium, may not be able to continue successfully commercializing XIAFLEX for Dupuytren's contracture and Peyronie's disease, successfully develop CCH for additional indications, obtain required regulatory approvals, manufacture XIAFLEX at an acceptable cost, in a timely manner and with appropriate quality, or successfully market products or maintain desired margins for products sold, and as a result we may not achieve sustained profitable operations.

### Critical Accounting Policies, Estimates and Assumptions

The preparation of unaudited consolidated financial statements in conformity with U.S. GAAP requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the unaudited consolidated financial statements and the reported amounts of revenues and expenses during the reporting period. These estimates are based on historical experience and on various other assumptions that we believe are reasonable under the circumstances. The information at March 31, 2014 and for the three months ended March 31, 2014 and 2013 is unaudited but includes all adjustments (consisting only of normal recurring adjustments) which, in the opinion of management, are necessary to state fairly the financial information set forth herein. The December 31, 2013 balance sheet amounts and disclosures included herein have been derived from the Company's December 31, 2013 audited consolidated financial statements. The interim results are not necessarily indicative of results to be expected for the full fiscal year. These unaudited consolidated financial statements should be read in conjunction with the audited consolidated financial statements for the year ended December 31, 2013 included in the Company's Annual Report on Form 10-K filed with the SEC on March 7, 2014. While our significant accounting policies are described in more detail in the notes to our unaudited consolidated financial statements, we believe the following accounting policies to be critical to the judgments and estimates used in the preparation of our unaudited consolidated financial statements. Actual results have differed in the past, and may differ in the future, from our estimates and could impact our earnings in any period during which an adjustment is

made.

Revenue Recognition. We recognize revenues from product sales when there is persuasive evidence that an arrangement exists, title passes, the price is fixed and determinable, and payment is reasonably assured. We currently recognize revenues resulting from the licensing, sublicensing and use of our technology and from services we sometimes perform in connection with the licensed technology.

14

---

### Table of Contents

We enter into product development licenses and collaboration agreements that may contain multiple elements, such as upfront license and sublicense fees, milestones related to the achievement of particular stages in product development and royalties. As a result, significant contract interpretation is sometimes required to determine the appropriate accounting, including whether the deliverables specified in a multiple-element arrangement should be treated as separate units of accounting for revenue recognition purposes, and if so, how the aggregate contract value should be allocated among the deliverable elements and when to recognize revenue for each element.

We recognize revenue for delivered elements only when the fair values of undelivered elements are known, when the associated earnings process is complete and, to the extent the milestone amount relates to our performance obligation, when our licensee confirms that we have met the requirements under the terms of the agreement, and when payment is reasonably assured. Changes in the allocation of the contract value between various deliverable elements might impact the timing of revenue recognition, but in any event, would not change the total revenue recognized on the contract. For example, nonrefundable upfront product license fees for product candidates for which we are providing continuing services related to product development are deferred and recognized as revenue over the development period.

Milestones, in the form of additional license fees, typically represent nonrefundable payments to be received in conjunction with the achievement of a specific event identified in a contract, such as completion of specified clinical development activities and/or regulatory submissions and/or approvals. We believe that a milestone represents the culmination of a distinct earnings process when it is not associated with ongoing research, development or other performance on our part. We recognize such milestones as revenue when they become due and payment is reasonably assured. When a milestone does not represent the culmination of a distinct earnings process, we recognize revenue in a manner similar to that of an upfront product license fee.

### Royalty/ Mark-up on Cost of Goods Sold / Earn-Out Revenue

For those arrangements for which royalty, mark-up on cost of goods sold or earn-out payment information becomes available and collectability is reasonably assured, we recognize revenue during the applicable period earned. For interim quarterly reporting purposes, when collectability is reasonably assured but a reasonable estimate of royalty, mark-up on cost of goods sold or earn-out payment revenues cannot be made, the royalty, mark-up on cost of goods sold or earn-out payment revenues are generally recognized in the quarter that the applicable licensee provides the written report and related information to us.

Under the Auxilium Agreement, we do not participate in the selling, marketing or manufacturing of products for which we receive royalties and a mark-up on the cost of goods sold revenues. The royalty and mark-up on cost of goods sold revenues will generally be recognized in the quarter that Auxilium provides the written reports and related information to us, that is, royalty and mark-up on cost of goods sold revenues are generally recognized one quarter following the quarter in which the underlying sales by Auxilium occurred. The royalties payable by Auxilium to us are subject to set-off for certain patent costs.

Under the DFB Agreement, pursuant to which we sold our topical collagenase business to DFB, we had the right to receive earn-out payments based on sales of certain products. This right to receive payments on Santyl sales expired in August 2013. Generally, under the DFB Agreement we would receive payments and a report within ninety (90) days from the end of each calendar year after DFB had sold the royalty-bearing product. DFB provided us earn-out reports on a quarterly basis. In 2013, BioSpecifics recognized all income from the Santyl sales under the DFB agreement, and, in March 2014 we received the corresponding cash payment for the income recognized in 2013.

Reimbursable Third Party Development Costs. We accrue patent expenses for research and development that are reimbursable by us under the Auxilium Agreement. We capitalize certain patent costs related to estimated third party development costs that are reimbursable under the Auxilium Agreement. As of March 31, 2014 our estimated net reimbursable third party patent costs accrual was approximately \$192,000.

Receivables and Deferred Revenue. Accounts receivable as of March 31, 2014 is approximately \$1.9 million, which consists of royalties and mark-up on costs of goods sold due from Auxilium in accordance with the terms of the Auxilium Agreement. Deferred revenue of \$0.2 million consists of licensing fees related to the cash payments received under the Auxilium Agreement in prior years and amortized over the expected development period of certain indications for XI AFLEX.

15

---

### Table of Contents

**Royalty Buy-Down.** On March 31, 2012, we entered into an amendment to our existing agreement with Dr. Martin K. Gelbard, dated August 27, 2008, related to our future royalty obligations for Peyronie's disease. The amendment enables us to buy down a portion of our future royalty obligations in exchange for an initial cash payment of \$1.5 million and five additional cash payments, one of which was paid in December 2013.

As of March 31, 2014, we have capitalized \$3.35 million related to this agreement which will be amortized over approximately five years, beginning in the second quarter of 2014, which represents the period estimated to be benefited using the straight-line method. In accordance with Accounting Standards Codification 350, Intangibles, Goodwill and Other, the Company amortizes intangible assets with finite lives in a manner that reflects the pattern in which the economic benefits of the assets are consumed or otherwise used up. If that pattern cannot be reliably determined, the assets are amortized using the straight-line method. We perform an evaluation of the recoverability of the carrying value of our intangible assets to determine if facts and circumstances indicate that the carrying value of intangible assets may be impaired and if any adjustment is warranted. Based on our evaluation as of March 31, 2014, no impairment existed for intangible assets.

**Stock Based Compensation.** Under ASC 718, we estimate the fair value of our employee stock awards at the date of grant using the Black-Scholes option-pricing model, which requires the use of certain subjective assumptions. The most significant assumptions are our estimates of the expected volatility of the market price of our stock and the expected term of an award. Expected volatility is based on the historical volatility of our common stock. When establishing an estimate of the expected term of an award, we consider the vesting period for the award, our historical experience of employee stock option exercises (including forfeitures) and the expected volatility. As required under the accounting rules, we review our valuation assumptions at each grant date and, as a result, we are likely to change our valuation assumptions used to value future employee stock-based awards granted, to the extent any such awards are granted.

Further, ASC 718 requires that employee stock-based compensation costs be recognized over the requisite service period, or the vesting period, in a manner similar to all other forms of compensation paid to employees. The allocation of employee stock-based compensation costs to each operating expense line are estimated based on specific employee headcount information at each grant date and estimated stock option forfeiture rates and revised, if necessary, in future periods if actual employee headcount information or forfeitures differ materially from those estimates. As a result, the amount of employee stock-based compensation costs we recognize in each operating expense category in future periods may differ significantly from what we have recorded in the current period.

## RESULTS OF OPERATIONS

### THREE MONTHS ENDED MARCH 31, 2014 AND 2013

#### Revenues

##### Product Revenues, net

Product revenues include the sales of the collagenase for laboratory use recognized at the time it is shipped to customers. We had a small amount of revenue from the sale of collagenase for laboratory use. For the three months ended March 31, 2014 and 2013 product revenues were \$3,678 and \$2,243, respectively. This decrease was primarily related to the amount of material required to perform testing and additional research by our customers.

##### Royalties

Royalties consist of royalties and the mark-up on cost of goods sold under the Auxilium Agreement and earn-out revenues associated with the DFB Agreement. Total royalty and mark-up on cost of goods sold for the three month

period ended March 31, 2014 were \$2.7 million as compared to royalty, mark-up on cost of goods sold and earn-out revenues of \$3.4 million in the 2013 period, a decrease of \$0.7 million or 20%. Royalty and the mark-up on cost of goods sold revenues recognized under the Auxilium Agreement were \$2.7 million for the 2014 period compared to \$2.4 million in the 2013 period. The increase of \$0.3 million was due to increased net sales of XIAFLEX during 2014 period reported to us by Auxilium.

Under the earn-out payment provision of the DFB Agreement, we had the right to receive earn-out revenues from DFB after certain net sales levels were achieved. This right to receive payments on Santyl sales expired in August 2013. Revenues recognized under the DFB Agreement were zero for the three months ended March 31, 2014 as compared to \$1.0 million in the 2013 period. The change in revenue was entirely due to the August 2013 expiration of the right to receive payments on Santyl.

16

---

Table of Contents

## Licensing Revenue

Licensing revenue consists of licensing fees, sublicensing fees and milestones. For the three months ended March 31, 2014 and 2013, we recognized total licensing and milestone revenue of approximately \$17,283 and \$544,881, respectively. Certain licensing fees recognized are related to the cash payments received under the Auxilium Agreement in prior years and amortized over the expected development period. For the three months ended March 31, 2014, we recognized licensing revenue related to the development of XIAFLEX of approximately \$17,283 as compared to \$44,881 in the 2013 period. In the 2013 period, licensing fees recognized of \$0.5 million were related to the exercise by Auxilium of its exclusive option to expand the field of its license for injectable collagenase to include the potential treatment of adult patients with edematous fibrosclerotic panniculopathy, commonly known as cellulite.

Under current accounting guidance, nonrefundable upfront license fees for product candidates for which we are providing continuing services related to product development are deferred and recognized as revenue over the development period. The remaining balance will be recognized over the respective development periods or when we determine that we have no ongoing performance obligations.

## Research and Development Activities and Expenses

Research and development expenses include, but are not limited to, internal costs, such as salaries and benefits, costs of materials, lab expense, facility costs and overhead. Research and development expenses also consist of third party costs, such as medical professional fees, product costs used in clinical trials, consulting fees and costs associated with clinical study arrangements. Research and development expenses were \$382,704 and \$294,874, respectively, for the three months ended March 31, 2014 and 2013, representing an increase in 2014 of \$87,830, or 30%. This increase in research and development expenses was primarily due to expenses related to our clinical development and research programs.

We are currently working to develop CCH for the treatment of human and canine lipoma and have begun a pre-clinical study in uterine fibroids.

The following table summarizes our research and development expenses related to our clinical development programs.

	Three Months Ended March 31, 2014	Three Months Ended March 31, 2013
<u>Program</u>		
Canine Lipoma	\$ 116,864	\$90,071
Human Lipoma	76,315	43,837
Uterine Fibroids	50,959	1,640

Successful development of drugs is inherently difficult and uncertain. Our business requires investments in research and development over many years, often for drug candidates that may fail during the research and development process. Even if the Company is able to successfully complete the development of our drug candidates, our long-term prospects depend upon our ability and the ability of our partners, particularly with respect to XIAFLEX and CCH, to continue to successfully commercialize these drug candidates.

There is significant uncertainty regarding our ability to successfully develop drug candidates in other indications. These risks include the uncertainty of:

the nature, timing and estimated costs of the efforts necessary to complete the development of our drug candidate projects;

the anticipated completion dates for our drug candidate projects;

the scope, rate of progress and cost of our clinical trials that we are currently running or may commence in the future with respect to our drug candidate projects;

the scope, rate of progress of our preclinical studies and other research and development activities related to our drug candidate projects;

17

---

Table of Contents

- clinical trial results for our drug candidate projects;
- the cost of filing, prosecuting, defending and enforcing any patent claims and other intellectual property rights relating to our drug candidate projects;
- the terms and timing of any strategic alliance, licensing and other arrangements that we have or may establish in the future relating to our drug candidate projects;
- the cost and timing of regulatory approvals with respect to our drug candidate projects; and
- the cost of establishing clinical supplies for our drug candidate projects.

Our current resources and liquidity are sufficient to advance our significant current research and development projects and, Auxilium will have the option to exclusively license the canine and human lipoma indications upon completion of the appropriate opt-in study.

General and Administrative Expenses

General and administrative expenses consist primarily of salaries and other related costs for personnel, consultant costs, legal fees, investor relations, professional fees and overhead costs. General and administrative expenses were \$1.2 million and \$1.6 million for the three months ended March 31, 2014 and 2013, respectively, a decrease of approximately \$0.4 million, or 23%, from 2013. The decrease in general and administrative expenses was due to lower third party licensing fees, legal, consulting services and investor relations partially offset by third party royalty fees.

Other Income and expense

Other income for the three months ended March 31, 2014 was \$8,121 compared to \$5,866 in the 2013 period. Other income in both periods consisted mostly of interest earned on our investments.

Provision for Income Taxes

Our deferred tax liabilities, deferred tax assets and related valuation allowances are impacted by events and transactions arising in the ordinary course of business, research and development activities, vesting of nonqualified options, deferred revenues and other items. Deferred tax assets are affected by the valuation allowance which is dependent upon several factors, including estimates of the realization of deferred income tax assets, and the impact of estimated future taxable income. Significant judgment is required to determine the estimated amount of valuation allowance to record. Changes in the estimate of the valuation allowance could materially increase or decrease our provision for income taxes in future periods.

For the three month period ended March 31, 2014 our provision for income taxes was \$0.4 million. The provision for income taxes for the three month period ended March 31, 2014 is based on an estimated effective tax rate derived from an estimate of consolidated earnings before taxes, adjusted for nondeductible expenses and other permanent differences for fiscal year 2013. For the three month period ended March 31, 2014, the valuation allowance with respect to our net deferred tax assets remained unchanged. As of March 31, 2014, our remaining deferred tax assets were approximately \$1.5 million.

For the three month period ended March 31, 2013 our provision for income taxes was \$0.7 million. The provision for income taxes for the three month period ended March 31, 2012 is based on an estimated effective tax rate derived from an estimate of consolidated earnings before taxes, adjusted for nondeductible expenses and other permanent

differences for fiscal year 2013. For the three month period ended March 31, 2013, the valuation allowance with respect to our net deferred tax assets remained unchanged. As of March 31, 2013, our remaining deferred tax assets were approximately \$1.6 million.

#### Net Income

For the three months ended March 31, 2014 we recorded net income of \$0.8 million, or \$0.12 per basic common share and \$0.11 per diluted common share, compared to net income of \$1.4 million, or \$0.21 per basic common share and \$0.19 per diluted common share for the same period in 2013.

18

---

Table of Contents

Liquidity and Capital Resources

To date, we have financed our operations primarily through product sales, debt instruments, licensing revenues and royalties under agreements with third parties and sales of our common stock. At March 31, 2014 and December 31, 2013, we had cash and cash equivalents and investments in the aggregate of approximately \$16.9 million and \$12.6 million, respectively.

Net cash provided by operating activities for the three months ended March 31, 2014 and 2013 was \$3.9 million. Cash provided by operations in the 2014 period resulted primarily from our operating income for the period, a payment of earn-out royalties due under the DFB Agreement on an annual basis and royalties and mark-up on cost goods sold revenues under the Auxilium Agreement. Cash provided by operations in the 2013 period resulted primarily from our operating income for the period, a payment of earn-out royalties due under the DFB Agreement on an annual basis and licensing fees, milestones, royalties and mark-up on cost goods sold revenues under the Auxilium Agreement.

Net cash used in investing activities for the three months ended March 31, 2014 was \$1.0 million as compared to net cash provided by investing activities of \$157,000 for the 2013 period. The net cash used in investing activities in the 2014 reflects the maturing of \$2.2 million and reinvestment of \$3.2 million in marketable securities. The net cash provided by investing activities in the 2013 period reflects the maturing of \$3.2 and reinvestment of \$3.0 million in marketable securities.

Net cash provided by financing activities for the three months ended March 31, 2014 was \$0.4 million as compared to net cash used in financing activities of \$0.2 million in the compared period of 2013. In the 2014 period, net cash provided by financing activities was mainly due to excess tax benefits related to share-based payments and proceeds received from stock option exercises partially offset by the repurchase of our common stock under our stock repurchase program of \$81,000. In the 2013 period, net cash used in financing activities was mainly due to the repurchase of our common stock under our stock repurchase program.

Off-Balance Sheet Arrangements

We do not have any off-balance sheet arrangements as defined in Item 303(a)(4) of Regulation S-K.

Item 3: Quantitative and Qualitative Disclosures About Market Risk.

We do not use derivative financial instruments or derivative commodity instruments for trading purposes. Our financial instruments consist of cash, cash equivalents, short-term investments, trade accounts receivable, accounts payable and long-term obligations. We consider investments that, when purchased, have a remaining maturity of 90 days or less to be cash equivalents.

Our investment portfolio is subject to interest rate risk, although limited given the nature of the investments, and will fall in value in the event market interest rates increase. All our cash and cash equivalents and short-term investments at March 31, 2014, amounting to approximately \$16.9 million, were maintained in bank demand accounts, money market accounts, and certificates of deposit. We do not hedge our interest rate risks, as we believe reasonably possible near-term changes in interest rates would not materially affect our results of operations, financial position or cash flows.

We are subject to market risks in the normal course of our business, including changes in interest rates. There have been no significant changes in our exposure to market risks since December 31, 2013.

Item 4. Controls and Procedures

Evaluation of Disclosure Controls and Procedures

The Company, under the supervision and with the participation of Thomas L. Wegman, the Company's President, Principal Executive Officer and Principal Financial Officer, evaluated the effectiveness of its disclosure controls and procedures as of the end of the period covered by this Report. Based on that evaluation, management has concluded that the Company's disclosure controls and procedures are effective to ensure that information required to be disclosed in reports filed under the Securities Exchange Act of 1934, as amended (the "Exchange Act"), is recorded, processed, summarized and reported within the time periods specified in the rules and forms of the SEC, and that such information is accumulated and communicated to the Company's management to allow timely decisions regarding required disclosure. Because of the inherent limitations in all control systems, any controls and procedures, no matter how well designed and operated, can provide only reasonable assurance of achieving the desired control objectives, and management necessarily is required to apply its judgment in evaluating the cost-benefit relationship of possible controls and procedures. Furthermore, our controls and procedures can be circumvented by the individual acts of some persons, by collusion of two or more people or by management override of the control, and misstatements due to error or fraud may occur and not be detected on a timely basis.
