Advantages to Listing vs. Selling the Portfolio

February 2012 4

We are Listing, Selling Equity and Tendering for Shares ..

- American Realty Capital Trust is going to list on the NASDAQ under the ticker symbol “ARCT” on or about March 1, 2012, almost four years to the day after it was launched
- Our pro forma financial data assumes a market price of \$11.50 per share⁽¹⁾
- At the same time we will be conducting a secondary offering: a syndicate of banks will raise \$50 to \$100 million
- We will also be making a tender offer to purchase shares

(1) For purposes of the pro forma financial data included in the registration statement on Form S-11, we have assumed that 6.6 million shares of common stock will be sold in the offering and that the initial public offering price of the common stock to be sold in the offering will be \$11.50 per share, which we have estimated based on our projected operating performance, trading levels of comparable companies and a dividend discount analysis.

February 2012 5

Why is ARCT Listing?

- To do what we said we would do – create value for the shareholders
- Listed REITs are trading at unprecedented multiples to funds from operations (FFO) per share
- We think ARCT may ultimately trade above the listing price based on our superior portfolio
- None of this is a coincidence – all part of a deliberate plan

February 2012 6

We Are Listing a Company that will Provide its Shareholders with Durable, Defensive Dividends .

How Does the Listing Help our Investors?

- No Lock Up
- Manage Tax Liability: 70% of shareholders would be subject to short-term capital gains taxes if they decide to tender or sell
- All shareholders will likely face some tax consequences if they sell
- Most investors have a basis below \$9.00 from the 100% return of capital distributions since inception
- No Change in Dividend: The dividend does not change for investors, still \$0.70/share annually, paid monthly
