⁽a) Securities are exempt from registration under Rule 144A of the Securities Act of 1933. These securities may be resold in transactions that are exempt from registration, normally to qualified institutional buyers. At September 30, 2011, the securities amounted to \$21,736,769 or 2.4% of net assets.

⁽b) Non-income producing security.

⁽c) Fair valued pursuant to guidelines approved by the board.

See previously submitted notes to financial statements for the semi-annual period ended June 30, 2011.

GAAP provides guidance on fair value measurements. In accordance with the standard, fair value is defined as the price that the Trust would receive to sell an investment or pay to transfer a liability in a timely transaction with an independent buyer in the principal market, or in the absence of a principal market the most advantageous market for the investment or liability. It establishes a single definition of fair value, creates a three-tier hierarchy as a framework for measuring fair value based on inputs used to value the Trust's investments, and requires additional disclosure about fair value. The hierarchy of inputs is summarized below:

- Level 1 unadjusted quoted prices in active markets for identical investments
- Level 2 other significant observable inputs (including quoted prices for similar investments, interest rates, prepayment speeds, credit risk, etc.)
- Level 3 significant unobservable inputs (including the Trust's own assumptions in determining the fair value of investments)

 For Level 1 inputs, the Trust uses unadjusted quoted prices in active markets for assets or liabilities with sufficient frequency and volume to provide pricing information as the most reliable evidence of fair value.

The Trust's Level 2 valuation techniques include inputs other than quoted prices within Level 1 that are observable for an asset or liability, either directly or indirectly. Level 2 observable inputs may include quoted prices for similar assets and liabilities in active markets or quoted prices for identical or similar assets or liabilities in markets that are not active in which there are few transactions, the prices are not current, or price quotations vary substantially over time or among market participants. Inputs that are observable for the asset or liability in Level 2 include such factors as interest rates, yield curves, prepayment speeds, credit risk, and default rates for similar liabilities.

For Level 3 valuation techniques, the Trust uses unobservable inputs that reflect assumptions market participants would be expected to use in pricing the asset or liability. Unobservable inputs are used to measure fair value to the extent that observable inputs are not available and are developed based on the best information available under the circumstances. In developing unobservable inputs, market participant assumptions are used if they are reasonably available without undue cost and effort.

The inputs or methodology used for valuing securities are not necessarily an indication of the risk associated with investing in those securities. The following is a summary of the inputs used as of September 30, 2011 in valuing the Trust's investments carried at fair value:

	Level 1	Level 2	Level 3
Investments in Real Estate Securities			
Common Stocks*	\$ 720,990,492	\$	\$ 10,681,800
Preferred Stocks*	168,892,394	35,965,218	
Total	\$ 889,882,886	\$ 35,965,218	\$ 10,681,800

^{*}Please refer to Portfolio of Investments for the regional classifications of these holdings.

The primary third party pricing vendor for the Trust's listed preferred stock investments is FT Interactive Data ("IDC"). When available, the Trust will obtain a closing exchange price to value the preferred stock investments

and, in such instances, the investment will be classified as Level 1 since an unadjusted quoted price was utilized. When a closing price is not available for the listed preferred stock investments, IDC will produce an evaluated mean price (midpoint between the bid and the ask evaluation) and such investments will be classified as Level 2 since other observable inputs were used in the valuation. Factors used in the IDC evaluation include trading activity, the presence of a two-sided market, and other relevant market data.

It is the Trust's policy to recognize transfers in and transfers out at the fair value as of the beginning of the period. The fair value of Level 2 and Level 1 investments at December 31, 2010 was \$41,153,699 and \$1,021,044,336, respectively. \$24,605,823 was transferred out of Level 2 into Level 1 and \$19,754,000 of preferred stock investments was transferred out of Level 1 into Level 2 during the period ended September 30, 2011 as a result of obtaining quoted exchange closing prices from the Trust's third party pricing vendor.

The Trust has one investment in a private equity security which is classified as Level 3 because no market quotations are readily available. In determining the fair value of this investment, the following factors may be evaluated: balance sheet, income statement, the portfolio of real estate investments held, economic factors and conditions in which the company operates, and comparable public company valuations and trading prices.

The following is a reconciliation of assets in which significant unobservable inputs (Level 3) were used in determining fair value:

	Common
