Form 10-Q
April 14, 2010

SECURITIES AND EXCHANGE COMMISSION
Washington, DC 20549

FORM 10-Q

Quarterly Report Pursuant to Section 13 or 15(d) of the Security Exchange Act of 1934 for the quarterly period ended February 28, 2010

OR

Transmission Report Pursuant to Section 13 or 15(d) of the Security Exchange Act of 1937 for the transition period from _____ to _____

Commission file number: 001-32046

Simulations Plus, Inc.
(Name of registrant as specified in its charter)

California
(State or other jurisdiction of
Incorporation or Organization)

95-4595609
(I.R.S. Employer
identification No.)

42505 10th Street West
Lancaster, CA 93534-7059
(Address of principal executive offices including zip code)

(661) 723-7723
(Registrant's telephone number, including area code)

Indicate by check mark whether the registrant (1) filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filings requirements for the past 90 days. Yes No

Indicate by check mark whether the registrant has submitted electronically and posted on its corporate Web site, if any, every Interactive Data File required to be submitted and posted pursuant to Rule 405 of Regulation S-T (§232.405 of this chapter) during the preceding 12 months (or for such shorter period that the registrant was required to submit and post such files). Yes No

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer,

Edgar Filing: SIMULATIONS PLUS INC - Form 10-Q

or a smaller reporting company. See the definitions of “large accelerated filer,” “accelerated filer,” and “smaller reporting company” in Rule 12b-2 of the Exchange Act (Check one):

- Large accelerated filer Accelerated filer
 Non-accelerated filer (Do not check if a smaller reporting company) Smaller reporting company

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act).
Yes No

The number of shares outstanding of the registrant’s common stock, par value \$0.001 per share, as of April 14, 2010 was 16,066,245 and no shares of preferred stock were outstanding.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS
(Unaudited)

Note 1: GENERAL

This report on Form 10-Q for the quarter ended February 28, 2010, should be read in conjunction with the Company's annual report on Form 10-K for the year ended August 31, 2009, filed with the SEC on November 30, 2009 and its amendment filed on March 1, 2010. As contemplated by the Securities and Exchange Commission under Article 8 of Regulation S-X, the accompanying financial statements and footnotes have been condensed and therefore do not contain all disclosures required by generally accepted accounting principles. The interim financial data are unaudited; however, in the opinion of Simulations Plus, Inc. ("we", "our", "us"), the interim data includes all adjustments, consisting only of normal recurring adjustments, necessary for a fair statement of the results for the interim periods. Results for interim periods are not necessarily indicative of those to be expected for the full year.

Note 2: SIGNIFICANT ACCOUNTING POLICIES

Estimates

Our condensed consolidated financial statements and accompanying notes are prepared in accordance with accounting principles generally accepted in the United States of America. Preparing financial statements requires management to make estimates and assumptions that affect the reported amounts of assets, liabilities, revenue, and expenses. These estimates and assumptions are affected by management's application of accounting policies. Actual results could differ from those estimates. Significant accounting policies for us include revenue recognition, accounting for capitalized computer software development costs, valuation of stock options, and accounting for income taxes.

Principles of Consolidation

The condensed consolidated financial statements include the accounts of Simulations Plus, Inc. and its wholly owned subsidiary, Words+, Inc. All significant intercompany accounts and transactions are eliminated in consolidation.

Revenue Recognition

We recognize revenues related to software licenses and software maintenance in accordance with Financial Accounting Standards Boards ("FASB") Accounting Standards Codification ("ASC") 985-605. Software products revenue is recorded when the following conditions are met: 1) evidence of arrangement exists, 2) delivery has been made, 3) the amount is fixed, and 4) collectability is probable. Post-contract customer support ("PCS") obligations are insignificant; therefore, revenue for PCS is recognized at the same time as the licensing fee, and the costs of providing such support services are accrued and amortized over the obligation period. For Words+ products, the revenue is recorded at the time of shipment, net of estimated allowances and returns.

As a byproduct of ongoing improvements and upgrades for the new programs and new modules of software, some modifications are provided to customers who have already purchased software at no additional charge. Other software modifications result in new, additional cost modules that expand the functionality of the software. These are licensed separately. We consider the modifications that are provided without charge to be minimal, as they do not significantly change the basic functionality or utility of the software, but rather add convenience, such as being able to plot some additional variable on a graph in addition to the numerous variables that had been available before, or adding some additional calculations to supplement the information provided from running the software. Such software modifications for any single product have typically occurred once or twice per year, sometimes more, sometimes less. Thus, they are infrequent. We provide, for a fee, additional training and service calls to our customers and recognize revenue at the time the training or service call is provided.

Generally, we enter into one-year license agreements with customers for the use of our pharmaceutical software products. We recognize revenue on these contracts when all the criteria are met.

Most license agreements have a term of one year; however, from time to time, we enter into multi-year license agreements. We generally unlock and invoice software one year at a time for multi-year licenses. Therefore, revenue is recognized one year at a time.

We recognize contract study revenue either equally over the term of the contract or using the percentage of completion method, depending upon how the contract studies are engaged, in accordance with FASB ASC 605-35. To recognize revenue using the percentage of completion method, we must determine whether we meet the following criteria: 1) there is a long-term, legally enforceable contract, 2) it is possible to reasonably estimate the total project costs, and 3) it is possible to reasonably estimate the extent of progress toward completion.

Reclassifications

Certain numbers in the prior year have been reclassified to conform to the current year's presentation.

Cash and Cash Equivalents

For purposes of the statements of cash flows, we consider all highly liquid investments purchased with original maturities of three months or less to be cash equivalents.

Accounts Receivable

We maintain an allowance for doubtful accounts for estimated losses that may arise if any of its customers are unable to make required payments. Management specifically analyzes the age of customer balances, historical bad debt experience, customer credit-worthiness, and changes in customer payment terms when making estimates of the collectability of the Company's trade accounts receivable balances. If management determines that the financial conditions of any of its customers deteriorated, whether due to customer-specific or general economic issues, an increase in the allowance may be made. Accounts receivable are written off when all collection attempts have failed. We also estimate the contractual discount obligation for third-party funding such as Medicare, Medicaid, and private insurance companies. Those estimated discounts are reflected in the allowance for doubtful accounts and contractual discounts.

Inventory

Inventory is stated at the lower of cost (first-in, first-out basis) or market and consists primarily of computers and peripheral computer equipment.

Capitalized Computer Software Development Costs

Software development costs are capitalized in accordance with FASB ASC 985-20. Capitalization of software development costs begins upon the establishment of technological feasibility and is discontinued when the product is available for sale.

The establishment of technological feasibility and the ongoing assessment for recoverability of capitalized software development costs require considerable judgment by management with respect to certain external factors including, but not limited to, technological feasibility, anticipated future gross revenues, estimated economic life, and changes in software and hardware technologies. Capitalized software development costs are comprised primarily of salaries and direct payroll-related costs and the purchase of existing software to be used in our software products.

Amortization of capitalized software development costs is provided on a product-by-product basis on the straight-line method over the estimated economic life of the products (not to exceed five years). Amortization of software development costs amounted to \$316,304 and \$252,043 for the six months ended February 28, 2010 and 2009, respectively. We expect future amortization expense to vary due to increases in capitalized computer software development costs.

We test capitalized computer software costs for recoverability whenever events or changes in circumstances indicate that the carrying amount may not be recoverable.

Property and Equipment

Property and equipment are recorded at cost, less accumulated depreciation and amortization. Depreciation and amortization are provided using the straight-line method over the estimated useful lives as follows:

| | |
|------------------------|-----------------------------------|
| Equipment | 5 years |
| Computer equipment | 3 to 7 years |
| Furniture and fixtures | 5 to 7 years |
| Leasehold improvements | Shorter of life of asset or lease |

Maintenance and minor replacements are charged to expense as incurred. Gains and losses on disposals are included in the results of operations.

Fair Value of Financial Instruments

Assets and liabilities recorded at fair value in the Condensed Consolidated Balance Sheets are categorized based upon the level of judgment associated with the inputs used to measure their fair value. The categories, as defined by the standard are as follows:

| Level Input: | Input Definition: |
|--------------|--|
| Level I | Inputs are unadjusted, quoted prices for identical assets or liabilities in active markets at the measurement date. |
| Level II | Inputs, other than quoted prices included in Level I, that are observable for the asset or liability through corroboration with market data at the measurement date. |
| Level III | Unobservable inputs that reflect management's best estimate of what market participants would use in pricing the asset or liability at the |

measurement date.

7

The following table summarizes fair value measurements by level at February 28, 2010 for assets and liabilities measured at fair value on a recurring basis:

| | Level I | Level II | Level III | Total |
|---------------------------|--------------|----------|-----------|--------------|
| Cash and cash equivalents | \$ 8,641,289 | \$ - | \$ - | \$ 8,641,289 |
| Total assets | \$ 8,641,289 | \$ - | \$ - | \$ 8,641,289 |

For certain of our financial instruments, including accounts receivable, accounts payable, accrued payroll and other expenses, accrued bonuses to officers, and accrued warranty and service costs, the amounts approximate fair value due to their short maturities.

Shipping and Handling

Shipping and handling costs, recorded as cost of sales, amounted to \$54,715 and \$47,666 for the six months ended February 28, 2010 and 2009, respectively.

Research and Development Costs

Research and development costs are charged to expense as incurred until technological feasibility has been established. These costs consist primarily of salaries and direct payroll-related costs. It also includes purchased software which was developed by other companies and incorporated into, or used in the development of, our final products.

Income Taxes

We utilize FASB ASC 740-10 which requires the recognition of deferred tax assets and liabilities for the expected future tax consequences of events that have been included in the financial statements or tax returns.

Under this method, deferred income taxes are recognized for the tax consequences in future years of differences between the tax bases of assets and liabilities and their financial reporting amounts at each year-end based on enacted tax laws and statutory tax rates applicable to the periods in which the differences are expected to affect taxable income. Valuation allowances are established, when necessary, to reduce deferred tax assets to the amount expected to be realized. The provision for income taxes represents the tax payable for the period and the change during the period in deferred tax assets and liabilities.

The difference between income tax expense attributable to continuing operations and the amount of income tax expenses that would result from applying domestic federal statutory rates to pre-tax income is mainly related to state income taxes, offset by the utilization of research and development credits for federal and state purposes. Our policy is to include interest and penalties related to unrecognized tax benefits in income tax expense. Interest and penalties amounted to \$731 and \$315 for the six months ended February 28, 2010 and 2009, respectively.

Customer relationships

We purchased customer relationships as a part of the acquisition of certain assets of Bioreason, Inc. in November 2005. Customer relationships was recorded at a cost of \$128,042, and is being amortized over 78 months under the sum-of-the-years'-digits method. Amortization expense for the six months ended February 28, 2010 and 2009 amounted to \$7,605 and \$10,597, respectively. Accumulated amortization as of February 28, 2010 and 2009 was \$112,333 and \$95,626, respectively.

Earnings per Share

We report earnings per share in accordance with FASB ASC 260-10 . Basic earnings per share is computed by dividing income available to common shareholders by the weighted-average number of common shares available. Diluted earnings per share is computed similar to basic earnings per share except that the denominator is increased to include the number of additional common shares that would have been outstanding if the potential common shares had been issued and if the additional common shares were dilutive. The components of basic and diluted earnings per share for the six months ended February 28, 2010 and 2009 were as follows:

| | 02/28/2010 | 02/28/2009 |
|--|-------------|------------|
| Numerator | | |
| Net income attributable to common shareholders | \$1,070,666 | \$679,794 |
| Denominator | | |
| Weighted-average number of common shares outstanding during the year | 15,735,400 | 16,309,683 |
| Dilutive effect of stock options | 743,633 | 1,002,559 |
| Common stock and common stock equivalents used for diluted earning per share | 16,479,033 | 17,312,242 |

Stock-Based Compensation

Compensation costs related to stock options are determined in accordance with FASB ASC 718-10 using the modified prospective method. Under this method, compensation cost includes: (1) compensation cost for all share-based payments granted prior to, but not yet vested as of September 1, 2006, based on the grant date fair value estimated in accordance with the original provisions of SFAS No. 123 amortized over the options' vesting period, and (2) compensation cost for all share-based payments granted subsequent to September 1, 2006, based on the grant-date fair value estimated in accordance with FASB ASC 718-10, amortized on a straight-line basis over the options' vesting period. Stock-based compensation was \$32,284 and \$80,967 for the six months ended February 28, 2010 and 2009, respectively, and is included in the condensed consolidated statements of operations as Salaries, Consulting, and Research and Development expense.

Concentrations and Uncertainties

International sales accounted for 30% and 29% of net sales for the six months ended February 28, 2010 and 2009, respectively. For Simulations Plus, Inc. (Pharmaceutical segment), two customers accounted for 22% and 15% of net sales during the six months ended February 28, 2010, compared with two customers accounting for 22% each of net sales during the six months ended February 28, 2009. We license our software on an annual basis, and two large customers renew their licenses during the first six months of our fiscal year. Therefore, as a percent of total revenue, the renewals from those two customers typically result in 20+ percent of all Pharmaceutical revenue for the first six months.

For Words+, Inc., third-party billing, which includes various government agencies as well as private insurance companies, accounted for 61% of net sales during the six months ended February 28, 2010, compared with 60% of net sales during the six months ended February 28, 2009. If changes are made in government funding policies for Words+ products, Words+ revenue may be impacted. We continually evaluate and monitor regulatory developments in funding matters, and we do not expect Medicare and Medicaid of all 50 states to discontinue their funding of Words+ products; however, there can be no assurances that the current level of revenue from third parties will continue.

We operate in the computer software industry, which is highly competitive and changes rapidly. Our operating results could be significantly affected by our ability to develop new products and find new distribution channels for new and existing products.

For Simulations Plus (Pharmaceutical segment), three customers comprised 19%, 15% (a dealer account representing various customers), and 10% of its accounts receivable at February 28, 2010, and three customers comprised 18%, 14%, and 12% of its accounts receivable at February 28, 2009. For Words+, third-party billing, which includes various government agencies, comprised 90% of its accounts receivable at February 28, 2010, and 75% of its accounts receivable at February 28, 2009. The collection of those accounts receivable in timely manner is critical in Words+' cash flow and its operations. We have three dedicated funding personnel who continually track such collections.

Our subsidiary, Words+, Inc., purchases components for its main computer products from four manufacturers. Words+, Inc. also uses a number of pictographic symbols that are used in its software products which are licensed from a third party. The inability of Words+ to obtain computers used in its products or to renew its licensing agreement to use pictographic symbols could negatively impact our financial position, results of operations, and cash flows.

Recently Issued Accounting Pronouncements

In September 2009, the FASB issued ASU 2009-14 which amends Statement of Position ("SOP") 97-2, "Software Revenue Recognition", to exclude tangible products containing software components and non-software components that function together to deliver the product's essential functionality. ASU 2009-14 applies to revenue arrangements entered into or materially modified in fiscal years beginning on or after June 15, 2010, with early application permitted with EITF 08-1. We expect to adopt this standard in the first quarter of fiscal 2011. We are currently evaluating the impact ASU 2009-14 will have on our consolidated financial statements.

In September 2009, the FASB issued ASU 2009-13, "Revenue Arrangements with Multiple Deliverables" ("EITF 08-1"). ASU 2009-13 amends EITF 00-21, "Revenue Arrangements with Multiple Deliverables", to require an entity to use an estimated selling price when vendor-specific objective evidence or acceptable third-party evidence does not exist for any products or services included in a multiple element arrangement. The arrangement consideration should be allocated among the products and services based upon their relative selling prices, thus eliminating the use of the residual method of allocation. ASU 2009-13 also requires expanded qualitative and quantitative disclosures regarding significant judgments made and changes in applying the guidance. ASU 2009-13 applies to fiscal years beginning after June 15, 2010, with early application permitted. We expect to adopt this standard in the first quarter of fiscal 2011. We are currently evaluating the impact ASU 2009-13 will have on the financial statements.

Note 3: PROPERTY AND EQUIPMENT

Property and equipment as of February 28, 2010 consisted of the following:

| | |
|---|------------|
| Equipment | \$80,830 |
| Computer equipment | 383,873 |
| Furniture and fixtures | 61,498 |
| Automobile | 21,769 |
| Leasehold improvements | 53,898 |
| Sub total | 601,868 |
| Less: Accumulated depreciation and amortization | (553,677) |
| Net Book Value | 48,191 |

Note 4: COMMITMENTS AND CONTINGENCIES

Employment Agreement

On August 31, 2009, we entered into an employment agreement with our President/Chief Executive Officer that expires in August 2011. The employment agreement provides for an annual base salary of \$275,000 per year, and a performance bonus in an amount not to exceed 10% of Employee's salary, or \$27,500 per year, at the end of each fiscal year. The specific amount of the bonus to be awarded will be determined by the Compensation Committee of the Board of Directors, based on the financial performance and achievements of the Company for the previous fiscal year. The agreement also provides Employee stock options, exercisable for five years, to purchase fifty (50) shares of Common Stock for each one thousand dollars (\$1,000) of net income before taxes at the end of each fiscal year up to a maximum of 120,000 options over the term of the agreement. We may terminate the agreement upon 30 days' written notice if termination is without cause. Our only obligation would be to pay its President the greater of a) 12 months salary or b) the remainder of the term of the employment agreement from the date of notice of termination.

Litigation

We are not a party to any litigation at this time and we are not aware of any pending litigation of any kind.

Note 5: SHAREHOLDERS' EQUITY

Stock Repurchase

On October 23, 2008, the board of directors authorized a share repurchase program enabling the buyback of up to \$2.5 million in shares during a 12-month period beginning Monday, October 27, 2008. The actual repurchase started on December 2, 2008; therefore the board of directors extended it through December 1, 2009 in order to have a full 12-month period. We have opened an account with Morgan Stanley Smith Barney for the purchase of such securities. Funds for any stock purchases will be drawn from our cash reserves.

On January 10, 2010, the board of directors authorized a renewed share repurchase program effective as of February 15, 2010. The renewed program enables the Company to buy back up to one million shares during a 12-month period. As of February 28, 2010, we had not bought back any shares under the renewed share repurchase program.

The details of repurchases made during the six months ended February 28, 2010 are listed in the following table:

| Period | Total Number of Shares Purchased | Average Price Paid per Share | Remaining Funds Available Under the Share Repurchase Plan (including broker's fees) |
|----------------------|----------------------------------|------------------------------|---|
| As of 08/31/09 | 846,842 | \$1.2569 | \$1,416,564 |
| 09/01/09 to 09/30/09 | 82,630 | \$1.6989 | \$1,274,155 |
| 10/01/09 to 10/31/09 | 52,364 | \$1.5685 | \$1,190,386 |
| 11/01/09 to 11/30/09 | 42,061 | \$1.4884 | \$1,126,560 |
| 12/01/09 | 2,586 | \$1.3823 | \$1,122,985 |
| As of 02/28/10 | 1,026,483 | \$1.3182 | |

Stock Option Plan

In September 1996, the Board of Directors adopted, and the shareholders approved, the 1996 Stock Option Plan (the "Option Plan") under which a total of 1,000,000 shares of common stock had been reserved for issuance. In March 1999, the shareholders approved an increase in the number of shares that may be granted under the Option Plan to 2,000,000. In February 2000, the shareholders approved an increase in the number of shares that may be granted under the Option Plan to 4,000,000. In December 2000, the shareholders approved an increase in the number of shares that may be granted under the Option Plan to 5,000,000. Furthermore, in February 2005, the shareholders approved an additional 1,000,000 shares, resulting in the total number of shares that may be granted under the Option Plan to 6,000,000. The 1996 Stock Option Plan terminated in September 2006 by its term.

On February 23, 2007, the Board of Directors adopted and the shareholders approved the 2007 Stock Option Plan under which a total of 1,000,000 shares of common stock had been reserved for issuance.

TRANSACTIONS IN FY 2010

| | Number of Options | Weighted-Average Exercise Price Per Share | Weighted-Average Remaining Contractual Life (Years) |
|--------------------------------|----------------------|---|--|
| Outstanding, August 31, 2009 | 2,862,536 | \$ 0.97 | |
| Granted | 202,666 | \$ 1.62 | |
| Exercised/Released | (796,500) | \$ 0.58 | |
| Cancelled/Forfeited | (27,000) | \$ 1.47 | |
| Expired | (377,000) | \$ 1.88 | |
| Outstanding, February 28, 2010 | 1,864,702 | \$ 1.02 | 4.5 |
| Exercisable, February 28, 2010 | 1,196,236 | \$ 0.83 | 2.8 |

The Black-Scholes option valuation model was developed for use in estimating the fair value of traded options, which do not have vesting restrictions and are fully transferable. In addition, option valuation models require the input of highly subjective assumptions, including the expected stock price volatility. Because our employee stock options have characteristics significantly different from those of traded options, and because changes in the subjective input assumptions can materially affect the fair value estimate, in management's opinion, the existing models do not necessarily provide a reliable single measure of the fair value of our employee stock options.

The weighted-average remaining contractual life of options outstanding issued under the Plan was 4.45 years at February 28, 2010. The exercise prices for the options outstanding at February 28, 2010 ranged from \$0.26 to \$3.03, and the information relating to these options is as follows:

| Exercise Price | | Awards Outstanding | | Awards Exercisable | | | |
|----------------|--------|--------------------|---|---------------------------------|-----------|---|---------------------------------|
| Low | High | Quantity | Weighted Average Remaining Contractual Life | Weighted Average Exercise Price | Quantity | Weighted Average Remaining Contractual Life | Weighted Average Exercise Price |
| \$0.26 | \$0.50 | 451,936 | 1.0 years | \$0.37 | 451,936 | 1.0 years | \$0.37 |
| \$0.51 | \$0.75 | 220,000 | 0.1 years | \$0.75 | 220,000 | 0.1 years | \$0.75 |
| \$0.76 | \$1.25 | 862,100 | 6.7 years | \$1.07 | 483,100 | 5.1 years | \$1.14 |
| \$1.26 | \$3.03 | 330,666 | 6.1 years | \$1.97 | 41,200 | 8.1 years | \$2.71 |
| | | 1,864,702 | 4.5 years | \$1.02 | 1,196,236 | 2.8 years | \$0.83 |

Other Stock Options

As of February 28, 2010, the Board of Directors holds options to purchase 63,000 shares of common stock at exercise prices ranging from \$0.30 to \$6.68, which were granted prior to February 28, 2010.

TRANSACTIONS IN FY 2010

| Transactions in FY10 | Number of Options | Weighted-Average Exercise Price Per Share |
|--------------------------------|-------------------|---|
| Outstanding, August 31, 2009 | 51,000 | \$ 1.89 |
| Granted | 12,000 | \$ 1.67 |
| Exercised | - | \$ - |
| Expired | - | \$ - |
| Outstanding, February 28, 2010 | 63,000 | \$ 1.85 |
| Exercisable, February 28, 2010 | 42,000 | \$ 1.63 |

Note 6: SEGMENT AND GEOGRAPHIC REPORTING

We account for segments and geographic revenues in accordance with ASC 280-10. Our reportable segments are strategic business units that offer different products and services. Results for each segment and consolidated results are as follows for the six months ended February 28, 2010 and February 28, 2009 (in thousands):

| | February 28, 2010 | | | |
|-------------------------------|--------------------------|------------------|--------------|----------|
| | Simulations Plus, Inc | Words +, Inc. | Eliminations | Total |
| Net Sales | \$ 3,962 | \$ 1,425 | | \$ 5,387 |
| Income (loss) from operations | 1,692 | (219) | | 1,473 |
| Identifiable assets | 13,421 | 1,754 | \$ (1,562) | 13,613 |
| Capital expenditures | 22 | 10 | | 32 |
| Depreciation and Amortization | 310 | 27 | | 337 |

| | February 28, 2009 | | | |
|-------------------------------|--------------------------|------------------|--------------|----------|
| | Simulations Plus, Inc | Words +, Inc. | Eliminations | Total |
| Net Sales | \$ 3,208 | \$ 1,382 | | \$ 4,590 |
| Income (loss) from operations | 1,028 | (119) | | 908 |
| Identifiable assets | 12,272 | 2,079 | \$ (1,721) | 12,630 |
| Capital expenditures | 15 | 20 | | 35 |
| Depreciation and Amortization | 248 | 25 | | 273 |

In addition, the Company allocates revenues to geographic areas based on the locations of its customers. Geographical revenues for the six months ended February 28, 2010 and 2009 were as follows (in thousands):

| | February 28, 2010 | | | | |
|------------------------|-------------------|----------|--------|---------|----------|
| | North America | Europe | Asia | Oceania | Total |
| Simulations Plus, Inc. | \$ 2,421 | \$ 1,124 | \$ 417 | \$ - | \$ 3,962 |
| Words+, Inc. | 1,342 | 22 | 34 | 27 | 1,425 |
| Total | \$ 3,763 | \$ 1,146 | \$ 451 | \$ 27 | \$ 5,387 |

| | February 28, 2009 | | | | |
|------------------------|-------------------|--------|--------|---------|----------|
| | North America | Europe | Asia | Oceania | Total |
| Simulations Plus, Inc. | \$ 1,934 | \$ 866 | \$ 408 | \$ - | \$ 3,208 |
| Words+, Inc. | 1,335 | 13 | 7 | 27 | 1,382 |
| Total | \$ 3,269 | \$ 879 | \$ 415 | \$ 27 | \$ 4,590 |

Note 7: EMPLOYEE BENEFIT PLAN

We maintain a 401(K) Plan for all eligible employees, and make matching contributions equal to 100% of the employee's elective deferral, not to exceed 4% of total employee compensation. We can also elect to make a profit-sharing contribution. Our contributions to this Plan amounted to \$40,975 and \$38,611 for the six months ended February 28, 2010 and February 28, 2009, respectively.

Note 8: SUBSEQUENT EVENT

From March 1, 2010 to April 12, 2010, an additional 34,689 shares were issued as results of options exercised.

In April 2010, we started buying back our own shares under the renewed repurchase program, and we plan to continue our share repurchase in accordance with the share repurchase plan, which authorizes up to 1 million shares through February 15, 2011.

| Period | Total Number of Shares Purchased | Average Price Paid per Share | Remaining Shares Authorized to Purchase Under the Share Repurchase Plan |
|----------------------|----------------------------------|------------------------------|---|
| 04/01/10 to 04/09/10 | 22,620 | \$1.845 | 977,380 |

Item 2. Management's Discussion and Analysis or Plan of Operations

Forward-Looking Statements

This document and the documents incorporated in this document by reference contain forward-looking statements that are subject to risks and uncertainties. All statements other than statements of historical fact contained in this document and the materials accompanying this document are forward-looking statements.

The forward-looking statements are based on the beliefs of our management, as well as assumptions made by and information currently available to our management. Frequently, but not always, forward-looking statements are identified by the use of the future tense and by words such as “believes,” “expects,” “anticipates,” “intends,” “will,” “may,” “could,” “would,” “projects,” “continues,” “estimates” or similar expressions. Forward-looking statements are not guarantees of future performance and actual results could differ materially from those indicated by the forward-looking statements. Forward-looking statements involve known and unknown risks, uncertainties, and other factors that may cause our or our industry’s actual results, levels of activity, performance or achievements to be materially different from any future results, levels of activity, performance or achievements expressed or implied by the forward-looking statements.

The forward-looking statements contained or incorporated by reference in this document are forward-looking statements within the meaning of Section 27A of the Securities Act of 1933, as amended (“Securities Act”) and Section 21E of the Securities Exchange Act of 1934, as amended (“Exchange Act”) and are subject to the safe harbor created by the Private Securities Litigation Reform Act of 1995. These statements include declarations regarding our plans, intentions, beliefs or current expectations.

Among the important factors that could cause actual results to differ materially from those indicated by forward-looking statements are the risks and uncertainties described under “Risk Factors” in our Annual Report and elsewhere in this document and in our other filings with the SEC.

Forward-looking statements are expressly qualified in their entirety by this cautionary statement. The forward-looking statements included in this document are made as of the date of this document and we do not undertake any obligation to update forward-looking statements to reflect new information, subsequent events or otherwise.

General

BUSINESS

Simulations Plus, Inc. (together with its subsidiary referred to as the “Company,” “us,” “we,” or “our”) and its wholly owned subsidiary, Words+, Inc. (“Words+”) produce different types of products: (1) Simulations Plus, incorporated in 1996, develops and produces software for use in pharmaceutical research and for education, as well as provides contract research services to the pharmaceutical industry. Simulations Plus has also taken over responsibility for producing a personal productivity software program called Abbreviate! originally spun out of products for the disabled by Words+ for the retail market, and (2) Words+, founded in 1981, produces computer software and specialized hardware for use by persons with disabilities. For the purposes of this document, we sometimes refer to the two businesses as “Simulations Plus” when referring to the business that is pharmaceutical software and services, educational software, and Abbreviate!, and “Words+” when referring to the business that is focused on assistive technologies for persons with disabilities.

SIMULATIONS PLUS

PRODUCTS

We currently offer four software products for pharmaceutical research: ADMET Predictor™, ClassPharmer™, DDDPlus™, and GastroPlus™. In addition to pharmaceutical research products, we offer a personal productivity software, “Abbreviate!” through the on-line Apple store as well as a Windows XP version through our website. We also offer a product line called FutureLab™ that provides simulated experiments for middle school and high school general science classes.

ADMET Predictor

Every drug molecule that fails in clinical trials, and every approved drug that gets withdrawn from the market, was bad from the time its structure was first drawn by a chemist or generated by a computer. They don't become bad later. Thus, the ability to predict unsuitable characteristics of new molecules as early as possible offers the promise of avoiding costly programs that end up in late-stage failures. Although not every failure mode can be predicted in this manner, those that can provide a means to reduce the number of failures that frequently occur after years of work and millions of dollars (sometimes over \$1.5 billion) have been spent.

ADMET (Absorption, Distribution, Metabolism, Excretion and Toxicity) Predictor provides a collection of highly sophisticated and statistically significant numerical models that predict various properties of chemical compounds from just their molecular structures. Our models are built using state-of-the-art machine learning approaches that are based primarily on artificial neural network ensembles (groups of artificial neural networks). Our models have been consistently demonstrated by independent third parties to provide the most accurate prediction capabilities available today.

This capability means a chemist can merely draw a molecule diagram and get estimates of a wide variety of properties, even though the molecule has never existed. Drug companies continually search through millions of such “virtual” molecular structures as they attempt to find new drugs. It has been estimated that there are somewhere on the order of 10⁶² possible drug-like molecular structures. That is such a huge number that it is difficult to comprehend. If we could evaluate a trillion molecules (10¹²) per second (we cannot), it would still take 10⁵⁰ seconds to evaluate them all -- that's about 10⁴² years. The age of the universe is said to be less than 10¹⁰ years. Clearly, we will never be able to make and test all of them, so computerized methods are the only hope to even scratch the surface of the total “chemical space” for potential pharmaceutical products.

The vast majority of drug-like molecules are not suitable as medicines for various reasons. Some have such low solubility that they will not dissolve well, some have such low permeability through cell walls that they will not be absorbed well, some degrade so quickly that they are not stable enough to have a useful shelf life, some bind to proteins (such as albumin) in blood to such a high extent that little unbound drug is available to reach the target, and many will produce a variety of adverse effects. Identification of such properties in the computer (“in silico”) enables researchers to eliminate poor compounds quickly and early before spending time and money to make them and run experiments to identify their weaknesses. Today, many potential new molecules can be eliminated on the basis of the properties predicted by ADMET Predictor without the need to actually make and test them.

Several independent studies have been published that compare the accuracy of software programs like ADMET Predictor. In almost every case, ADMET Predictor has been ranked first in accuracy. The specific set of molecules used in such studies, as well as the statistics used for comparison, may favor one program over others; however, across all published studies, ADMET Predictor has been top-ranked far more than any other program. This is a remarkable accomplishment, considering the greater size and resources of many of our competitors.

ADMET Predictor includes ADMET Modeler™. ADMET Modeler was first released in July of 2003 as a separate product, and was integrated into ADMET Predictor in 2006. This powerful program automates the training of the predictive models used in ADMET Predictor, so they are produced in a small fraction of the time once required. For example, new toxicity models were developed in a matter of a few hours once we completed the tedious effort of “cleaning up” the databases (which often contain a significant number of errors). Prior to the availability of ADMET Modeler, we would have needed as much as three months for each new model after cleaning the databases to obtain similar results.

Pharmaceutical companies spend enormous amounts of money conducting a wide variety of experiments on new molecules each year. Using such data to build predictive models provides a second return on this investment; however, in the past, model building has traditionally been a tedious activity performed by specialists. With ADMET Modeler integrated into ADMET Predictor, scientists without model-building experience can now use their own experimental data to quickly create high-quality predictive models.

ADMET Predictor is compatible with the popular Pipeline Pilot™ software offered by SciTegic, a subsidiary of Accelrys. This software serves as a tool to allow chemists to run several different software programs in series to accomplish a set workflow for large numbers of molecules. In early discovery, chemists often work with hundreds of thousands or millions of “virtual” molecules – molecules that exist only in computer files. The chemist needs to decide which few molecules from these large “libraries” should be made and tested. Using Pipeline Pilot with ADMET Predictor (and ClassPharmer™ – see below), perhaps in conjunction with other software products, the chemist can create and screen very large libraries faster and more efficiently than by running each program by itself. Many scientists believe that in silico molecule design is the wave of the future, and we believe we are at the forefront of this new technology.

During the second quarter, we continued to make good progress on our Small Business Innovation Research (SBIR) grant with the National Institutes of Health (NIH). Efforts during the second quarter included continuing work on the ability to predict which atoms in a molecule are most likely to be affected by metabolism by certain enzymes. This is an exciting new capability that is a part of our SBIR grant effort, and we expect it will add an important new capability to ADMET Predictor when it is completed.

ClassPharmer™

ClassPharmer continues to evolve into an ever more powerful tool for medicinal and computational chemists. Coupled with ADMET Predictor, the two programs provide an unmatched capability for chemists to search through huge libraries of compounds to find the most interesting classes and molecules that are active against a particular target. In addition, ClassPharmer with ADMET Predictor can take an interesting (but not acceptable) molecule and generate high quality analogs (i.e., similar new molecules) using several different algorithms to generate new molecules that are both active against a target while also being acceptable in a variety of ADMET (Absorption, Distribution, Metabolism, Excretion and Toxicity) properties.

ClassPharmer’s molecule design capabilities provide ways for chemists to rapidly generate large numbers of novel chemical structures based on intelligence from compounds that have already been synthesized and tested, or from basic chemical reactions selected by the user. Export of results is available in Microsoft Excel™ format as well as other convenient file formats requested by users.

During the second quarter, the “refactoring” effort continued, and the in-house test version of ClassPharmer is now both faster and more compact, and has a number of new powerful options for visualizing various types of information generated by the program. We believe the upcoming release of the next version of ClassPharmer will be received with considerable excitement, and we will be presenting results generated with it as part of a scientific poster session at the ADMET 2010 conference in Munich in April.

DDDPlus

DDDPlus sales have continued to grow as more and more formulation scientists recognize the value of this one-of-a-kind simulation software in their work. During 2009, improvements were added to further enhance the value of this product, including numerous user convenience features, as well as more sophisticated handling of dosage forms that incorporate multiple polymers for controlled release formulations.

Development efforts on DDDPlus were minimal during the second quarter because of a heavy load of contract consulting studies that required staff time to complete on schedule. A few small improvements and minor bug fixes were implemented.

GastroPlus

GastroPlus continues to enjoy its “gold standard” status in the industry for its class of simulation software. At the recent annual conference of the American Association of Pharmaceutical Scientists in Los Angeles in November 2009, GastroPlus was mentioned by every speaker in several different sessions. No other competitive product received such recognition. GastroPlus is used industry-wide from early drug discovery through preclinical development and into early clinical trials.

At an international conference in Shanghai, China, in May 2008, Pfizer scientists presented a scientific poster describing a two-year study in which all four commercially available PBPK (physiologically based pharmacokinetics) simulation programs were compared for their ability to predict human pharmacokinetics from preclinical (animal and in vitro) data. The study was divided into two arms: intravenous and oral dosing. GastroPlus was ranked first in both arms. No other software was ranked consistently second or third. This independent evaluation, which was accomplished via analysis of 21 Pfizer proprietary compounds with data from early discovery all the way through human trials, provides the strongest possible validation of the superiority of GastroPlus in pharmaceutical research and development.

The insight gained through GastroPlus simulations can guide project decisions in various ways. Among the kinds of knowledge gained through such simulations are: (1) the best estimate for “first dose in human” for a new drug prior to Phase I trials, (2) whether a potential new drug compound is likely to be absorbed at high enough levels to achieve the desired blood concentrations needed for effective therapy, (3) whether the absorption process is affected by certain enzymes and transporter proteins in the intestinal tract that may cause the amount of drug reaching the blood to be very different after absorption from one region of the intestine to another, (4) when certain properties of a new compound are probably adequately estimated through computer (“in silico”) predictions (such as from ADMET Predictor) or simple experiments rather than through more expensive and time-consuming in vitro or animal experiments, (5) what the likely variations in blood and tissue concentration levels of a new drug would be in a large population, in different age groups or in different ethnic groups, and (6) whether a new formulation for an existing approved drug is likely to demonstrate “bioequivalence” (equivalent blood concentration versus time) to the currently marketed dosage form in a human trial.

In November 2009 we released the current version of GastroPlus (version 6.1). This release provides new capabilities for dosing to the oral cavity via lingual (on the tongue), sublingual (under the tongue), and buccal (inside the cheek) dosage forms. We also added better prediction of the dissolution and absorption of certain low-solubility drugs by incorporating the distribution of bile salts in the intestinal tract for both fasted and fed conditions, and a separate improvement that better handles the dissolution and absorption of nanoparticle formulations.

Work on Version 7.0, the next major release, continued through the second quarter. This important new release will incorporate a highly sophisticated drug-drug interaction simulation capability that we've been developing under our funded collaboration with Roche. Beta versions of the drug-drug interaction module have been in testing at Roche for several months with excellent results. This new version will also include the ocular drug delivery model from our funded collaboration with Pfizer and the pulmonary drug delivery model we developed under our funded collaboration with GlaxoSmithKline. We believe this combination of capabilities will put GastroPlus further in front of the limited competition we see in this market niche.

Our marketing intelligence and reorder history indicate that GastroPlus continues to dominate its market niche in the number of users worldwide. In addition to virtually every major pharmaceutical company, licenses include government agencies in the U.S and abroad, a growing number of smaller pharmaceutical and biotech companies, generic drug companies, and drug delivery companies (companies that design the tablet or capsule for a drug compound that was developed by another company). Although these companies are smaller than the pharmaceutical giants, they can also save considerable time and money through simulation. We believe this part of the industry, which includes many hundreds of companies, represents major growth potential for GastroPlus. Our experience has been that the number of new companies adopting GastroPlus has been growing steadily, adding to the base of annual licenses each year. In addition, consolidation by larger companies has not affected our sales to date. In fact, those companies have adopted in silico tools at ever-greater levels, and our licenses have increased at renewal time even in the face of such consolidation.

Contract Research and Consulting Services

Our recognized world-class expertise in oral absorption and pharmacokinetics is evidenced by the fact that our staff members have been speakers or presenters at over 50 prestigious scientific meetings worldwide in the past five years. We frequently conduct contracted studies for customers who prefer to have studies run by our scientists rather than to license our software and train someone to use it. The demand for our consulting services has been increasing steadily, and we expect this trend to continue. Long-term collaborations and shorter-term consulting contracts serve both to showcase our technologies and as a way to build and strengthen customer relationships. Revenues recognized from consulting services (not including funded collaborations – only consulting for specific drug projects) during the second quarter of FY10 were approximately \$301,000 compared with \$62,000 in the second quarter of FY09.

Government-Funded Research

We are well along in our \$525,000 Phase II SBIR (Small Business Innovation Research) grant awarded by the NIH (National Institutes of Health). This SBIR grant provides funds that allow us to expand staff and grow the product line without adversely affecting earnings, because the expenses associated with the efforts in the grant study are funded largely through the grant with some company support.

WORDS+ SUBSIDIARY

PRODUCTS

Our wholly owned subsidiary, Words+, Inc., has been an industry pioneer and technology leader for over 28 years, focused on introducing and improving augmentative and alternative communication and computer access software and devices for people with disabilities. Following closely behind the introduction of four new products last quarter, Words+ introduced an eyegaze product at the national CSUN Conference in San Diego during March, 2010. Eyegaze technology allows people to operate a computer or communication device by simply looking at the screen, and has been a major breakthrough for people with severe disabilities. The introduction of an eyegaze product has been our goal for some time, but we were previously unable to negotiate a profitable deal with an outside manufacturer. We have now done so. We're currently processing orders and plan to ship product during April, 2010. The addition of eyegaze to our product line significantly increases the effectiveness of our sales network, as many of our distributors were previously selling a different eyegaze product, and our sales employees had no eyegaze product to offer. Our sales force is now focused on adding our eyegaze product to the rest of our product line. We are excited and expect this product to significantly increase Words+ market share, revenue and profitability.

Results of Operations

Comparison of Three Months Ended February 28, 2010 and February 28, 2009.

The following table sets forth our consolidated statements of operations (in thousands) and the percentages that such items bear to net sales:

| | Three Months Ended | | | |
|-------------------------------------|--------------------|---------|----------|--------|
| | 02/28/10 | | 02/28/09 | |
| Net sales | \$2,950 | 100% | \$2,457 | 100% |
| Cost of sales | 701 | 23.8 | 627 | 25.5 |
| Gross profit | 2,249 | 76.2 | 1,830 | 74.5 |

| Net income | \$641 | 21.7% | \$368 | 14.0% |

Net Sales

Consolidated net sales increased \$493,000, or 20.1%, to \$2,950,000 in the second fiscal quarter of 2010 (2QFY10) from \$2,457,000 in the second fiscal quarter of 2009 (2QFY09). Our sales from pharmaceutical and educational software increased approximately \$448,000, or 25.2%; and our Words+, Inc. subsidiary's sales also increased approximately \$45,000, or 6.6%, for the quarter. We attribute the increase in pharmaceutical software sales to a combination of SBIR grant revenue, corroborations/study contracts with large pharmaceutical companies, software licenses to new customers, and licensing of new modules to existing customers, as well as increases in number of licenses with existing customers that outweighed the loss of sales from some customers reported in 2QFY09.

We attribute the increase in Words+ sales primarily to an increase in “MessageMates” product sales to Japan and to sales of our “Conversa” product with preloaded “Say-it! SAM” software. Increased revenues from these products outweighed decreased revenues from other products.

Cost of Sales

Consolidated cost of sales increased \$73,000, or 11.7%, to \$701,000 in 2QFY10 from \$627,000 in 2QFY09. Cost of sales as a percentage of revenue for 2QFY10 decreased 1.7% to 23.8% from 25.5% in 2QFY09. For Simulations Plus (pharmaceutical business), cost of sales decreased \$18,000, or 5.6%, and as a percentage of revenue, cost of sales also decreased to 13.6% in 2QFY10 from 18.0% in 2QFY09. A significant portion of cost of sales for pharmaceutical software products is the systematic amortization of capitalized software development costs, which is an independent fixed cost rather than a variable cost related to sales. This amortization cost increased approximately \$37,000, or 32.2%, in 2QFY10 compared with 2QFY09. Royalty expense, a variable cost related to sales of our GastroPlus core program as well as our ADMET Predictor Enslein Metabolism module, decreased approximately \$15,000, or 12.0%, in 2QFY10 compared with 2QFY09 due to a reversing royalty cost on the Enslein Metabolism Module resulting from an amended royalty agreement.

For Words+, cost of sales increased \$91,000, or 29.7%. As a percentage of revenue, cost of sales increased to 55.1% in 2QFY10 from 45.3% in 2QFY09. We attribute the percentage increase in cost of sales for Words+ to sales generated from products with lower margins. As we mentioned in the sales discussion above, we sold MessageMates to our distributor in Japan with a volume discount, and experienced increased revenue from our “Conversa” product, which has a lower margin, resulting in a higher cost of sales.

Gross Profit

Consolidated gross profit increased \$419,000, or 22.9%, to \$2,249,000 in 2QFY10 from \$1,830,000 in 2QFY09. We attribute this increase to increased sales of pharmaceutical software and services in addition to increased sales of Words+ products, which outweighed the increase in Words+ cost of goods sold.

Selling, General and Administrative Expenses

Consolidated selling, general and administrative (SG&A) expenses decreased \$52,000, or 5.0%, to \$1,089,000 in 2QFY10 from \$1,037,000 in 2QFY09. For Simulations Plus, SG&A decreased \$11,000, or 1.9%, and as a percentage of sales, SG&A decreased to approximately 26.2% in 2QFY10 from approximately 33.5% in 2QFY09. The major decreases in SG&A expenses were commissions, and salary expense which outweighed increases in travel expenses, advertisement, consultant fees, contract labor, and telephones.

For Words+, SG&A expenses decreased \$63,000, or 14.1%, due primarily to decreases in technical service costs, repairs, and merchant credit card fees. These decreases outweighed increases in commissions, trade shows, travel, bad debts, salaries and payroll related expenses.

Research and Development

We incurred approximately \$509,000 of research and development costs for both companies during 2QFY10. Of this amount, \$257,000 was capitalized and \$252,000 was expensed. In 2QFY09, we incurred \$438,000 of research and development costs, of which \$152,000 was capitalized and \$286,000 was expensed. The increase of \$71,000, or 16.2%, in total research and development expenditures from 2QFY09 to 2QFY10 was due to hiring R&D contractors, salary of a new hire and salary increases to existing staff.

Other income (expense)

Net other income (expense) increased by \$14,000, or 26.1%, to \$66,000 in 2QFY10 from \$52,000 in 2QFY09. This is due to increases in interest revenues from our Money Market account and gains from currency exchange.

Provision for Income Taxes

The provision for income taxes increased by \$142,000, or 74.6%, to \$333,000 in 2QFY10 from \$191,000 in 2QFY09 due to our estimation of higher provision for income tax in fiscal year 2010. The tax rate used in this report is lower than standard rate because of various tax credits generated and used during this reporting period.

Net Income

Consolidated net income increased by \$273,000, or 74.1%, to \$641,000 in 2QFY10 from \$368,000 in 2QFY09. We attribute this increase in profit to the increases in revenue from pharmaceutical software/services and Words+ products, other income, and decreases in operating expenses which outweighed increase in cost of sales and tax provision.

Comparison of Six Months Ended February 28, 2010 and February 28, 2009.

The following table sets forth our consolidated statements of operations (in thousands) and the percentages that such items bear to net sales:

| | Six Months Ended | | | |
|-------------------------------------|------------------|---------|----------|--------|
| | 02/28/10 | | 02/28/09 | |
| Net sales | \$5,387 | 100% | \$4,590 | 100% |
| Cost of sales | 1,307 | 24.3 | 1,187 | 25.9 |
| Gross profit | 4,080 | 75.7 | 3,403 | 74.1 |
| Selling, general and administrative | 2,093 | 38.9 | 1,940 | 42.3 |
| Research and development | 514 | 9.5 | 554 | 12.1 |
| Total operating expenses | 2,607 | 48.4 | 2,494 | 54.3 |
| Income from operations | 1,473 | 27.3 | 909 | 19.8 |
| Other income | 162 | 3.0 | 103 | 2.2 |
| Net income before taxes | 1,635 | 30.4 | 1,012 | 22.1 |
| (Provision for) income taxes | (564) | (10.5) | (332) | (7.2) |
| Net income | \$1,071 | 19.9% | \$680 | 14.9% |

Net Sales

Consolidated net sales increased \$797,000, or 17.4%, to \$5,387,000 in the first six months of fiscal year 2010 (6moFY10) from \$4,590,000 in the first six months of fiscal year 2009 (6moFY09). Our sales from pharmaceutical software and services increased approximately \$753,000, or 23.5%, and our Words+, Inc. subsidiary's sales increased approximately \$44,000, or 3.2%, for 6moFY10.

We attribute the increase in pharmaceutical software sales to increased licenses, both to new customers and for new modules, additional licenses to renewal customers, SBIR grant, and corroborations/contract studies. We attribute the increase in Words+ sales to sales of our new "Conversa™" with Say-It! SAM software and "MessageMates" ordered from Japan. Those increases outweighed decreases in "Freedom" and "TuffTalker" product sales.

Cost of Sales

Consolidated cost of sales increased \$120,000, or 10.1%, to \$1,307,000 in 6moFY10 from \$1,187,000 in 6moFY09. Cost of sales as a percentage of revenue in 6moFY10 decreased 1.6% to 24.3% from 25.9% in 6moFY09. For Simulations Plus, cost of sales increased \$48,000, or 8.9%; however, as a percentage of revenue, cost of sales decreased to 14.9% in 6moFY10 from 16.9% in 6moFY09. A significant portion of cost of sales for pharmaceutical software products is the systematic amortization of capitalized software development costs, which is an independent fixed cost rather than a variable cost related to sales. This amortization cost increased approximately \$64,000, or 28.0%, in 6moFY10 compared with 6moFY09. Royalty expense, which is a variable cost related to sales of our GastroPlus core program as well as our new ADMET Predictor Enslein Metabolism Module, increased approximately \$2,000, or 1.2%, in 6moFY10 compared with 6moFY09. This amount was reduced by \$12,000 in royalties for the Enslein Metabolism Module as a result of an amended royalty agreement.

For Words+, cost of sales increased \$72,000, or 11.2%. As a percentage of revenue, cost of sales also increased to 50.2% in 6moFY10 from 46.6% in 6moFY09. We attribute the percentage increase in cost of sales for Words+ to sales generated from products with lower margins. As we mentioned in the sales discussion above, we sold MessageMates to our distributor in Japan with a volume discount. Increased revenue from our "Conversa" product which has a lower margin, also resulted in higher cost of sales.

Gross Profit

Consolidated gross profit increased \$677,000, or 19.9%, to \$4,080,000 in 6moFY10 from \$3,403,000 in 6moFY09. We attribute this increase to increased sales of pharmaceutical software and services with healthy gross margin which outweighed the decrease in gross profit from Words+ products.

Selling, General and Administrative Expenses

Consolidated selling, general and administrative (SG&A) expenses increased \$153,000, or 7.9%, to \$2,093,000 in 6moFY10 from \$1,940,000 in 6moFY09. For Simulations Plus, SG&A increased \$68,000, or 6.0%; however, as a percentage of sales, SG&A decreased 3.0%, from 51.2% in 6moFY09 to 54.3% in 6moFY10. The major increases in SG&A expenses were expanded trade shows, travel, professional fees, and consultant fees which outweighed decreases in commissions and salary expense in 6moFY10.

For Words+, SG&A expenses increased \$84,000, or 10.5%, to \$884,000 in 6moFY10 from \$800,000 in 6moFY09. We attribute this increase in SG&A to an increase in restructured commission expense to be competitive with other companies in the industry, contract labor, repairs, salaries and payroll-related expenses which outweighed decreases in bad debts, technical service costs, and equipment rental.

Research and Development

We incurred approximately \$970,000 of research and development costs for both companies in 6moFY10. Of this amount, \$456,000 was capitalized and \$514,000 was expensed. In 6moFY09, we incurred \$907,000 of research and development costs, of which \$353,000 was capitalized and \$554,000 was expensed. The increase of \$63,000, or 7.0%, in total research and development expenditures from 6moFY09 to 6moFY10 was due to a combination of salaries for new hires and salary increases and bonuses to existing staff.

Other income

Net other income in 6moFY10 increased by \$59,000, or 57.1%, from \$103,000 to \$162,000. This is due to increased interest revenues from Money Market accounts and a gain on currency exchange from the billing in foreign currencies at the request from our customers.

Provision for Income Taxes

The provision for income taxes increased by \$232,000, or 69.9%, to \$564,000 in 6moFY10 from \$332,000 in 6moFY09. This increase is due primarily to our estimation of higher provision for income tax in fiscal year 2010. The tax rate used in this report is lower than standard rate because of various tax credits generated and used during this reporting period.

Net Income (loss)

Consolidated net income increased by \$391,000, or 57.5%, to \$1,071,000 in 6moFY10 from \$680,000 in 6moFY09. We attribute this increase in profit to the increases in revenue from pharmaceutical software/services and Words+ products, other income, and decreases in operating expenses which outweighed increase in cost of sales and tax provision.

Liquidity and Capital Resources

Our principal sources of capital have been cash flows from our operations. We have achieved continuous positive operating cash flow in the last six fiscal years. We believe that our existing capital and anticipated funds from operations will be sufficient to meet our anticipated cash needs for working capital and capital expenditures for the foreseeable future. Thereafter, if cash generated from operations is insufficient to satisfy our capital requirements, we may open a revolving line of credit with a bank, or we may have to sell additional equity or debt securities or obtain expanded credit facilities. In the event such financing is needed in the future, there can be no assurance that such financing will be available to us, or, if available, that it will be in amounts and on terms acceptable to us. If cash flows from operations became insufficient to continue operations at the current level, and if no additional financing was obtained, then management would restructure the Company in a way to preserve its pharmaceutical and disability businesses while maintaining expenses within operating cash flows.

Item 3. Quantitative and Qualitative Disclosures about Market Risk

Our risk from exposure to financial markets is limited to foreign exchange variances and fluctuations in interest rates. We may be subject to some foreign exchange risks. Most of our business transactions are in U.S. dollars, although we generate significant revenues from customers overseas. The exception is that we were compensated in Japanese yen by some Japanese customers and in Euros by one European customer. As a result, we experienced a larger gain in Q2FY10 than Q2FY09 from currency exchange. In the future, if foreign currency transactions increase significantly, then we may mitigate this effect through foreign currency forward contracts whose market-to-market gains or losses are recorded in "Other Income or expense" at the time of the transaction. To date, exchange rate exposure has not resulted in a material impact.

Item 4. Controls and Procedures

We are responsible for maintaining disclosure controls and procedures, as defined in Rules 13a-15(e) and 15d-15(e) under the Securities Exchange Act of 1934, as amended (the "Exchange Act"). Disclosure controls and procedures are controls and other procedures designed to ensure that the information required to be disclosed by us in the reports that we file or submit under the Exchange Act is recorded, processed, summarized, and reported within the time periods specified in the Securities and Exchange Commission's rules and forms. Disclosure controls and procedures include, without limitation, controls and procedures designed to ensure that information required to be disclosed by us in the

reports that we file or submit under the Exchange Act is accumulated and communicated to our management, including our principal executive officer and principal financial officer, as appropriate to allow timely decisions regarding required disclosure. In designing and evaluating disclosure controls and procedures, management recognizes that any controls and procedures, no matter how well designed and operated, can provide only reasonable assurance of achieving the desired control objectives, and management is required to apply its judgment in evaluating the cost-benefit relationship of possible controls and procedures.

Based on our management's evaluation (with the participation of our chief executive officer and chief financial officer) of our disclosure controls and procedures as required by Rule 13a-15 under the Exchange Act, our principal executive officer and principal financial officer have concluded that our disclosure controls and procedures were effective as of February 28, 2010.

Management's Report on Internal Control over Financial Reporting

Our management is responsible for establishing and maintaining adequate internal controls over financial reporting, as defined in Exchange Act Rule 13a-15(f). Our internal controls over financial reporting are designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of consolidated financial statements for external purposes in accordance with generally accepted accounting principles.

No changes were made in our internal controls over financial reporting (as defined in Rules 13a-15(f) and 15d-15(f) of the Exchange Act) during our most recent fiscal quarter that have materially affected or are reasonably likely to materially affect, our internal controls over financial reporting.

Our management, including our CEO and CFO, does not expect that our disclosure controls or internal controls over financial reporting will prevent all errors or all instances of fraud. A control system, no matter how well designed and operated, can provide only reasonable, not absolute, assurance that the control system's objectives will be met. Further, the design of a control system must reflect the fact that there are resource constraints, and the benefits of controls must be considered relative to their costs. Because of the inherent limitations in all control systems, no evaluation of controls can provide absolute assurance that all control issues and instances of fraud, if any, within our company have been detected. These inherent limitations include the realities that judgments in decision-making can be faulty, and that breakdowns can occur because of simple errors or mistakes. Controls can also be circumvented by the individual acts of some persons, by collusion of two or more people, or by management override of the controls. The design of any system of controls is based in part upon certain assumptions about the likelihood of future events, and any design may not succeed in achieving its stated goals under all potential future conditions. Over time, controls may become inadequate because of changes in conditions or deterioration in the degree of compliance with policies or procedures. Because of the inherent limitation of a cost-effective control system, misstatements due to error or fraud may occur and not be detected.

Part II. Other Information

Item 1. Legal Proceedings

The Company is not a party to any legal proceedings and is not aware of any pending legal proceedings of any kind.

Item 1A. Not applicable.

Item 2. Changes in Securities

Since December 2008, the Company has been buying back its own shares, and plans to continue its share repurchase in accordance with its share repurchase plan. Under the original repurchase program, the Company has bought back 1,026,483 shares by the end of February 28, 2010. On January 10, 2010, the board of directors authorized a renewed share repurchase program effective as of February 15, 2010. The renewed program enables the Company the buyback of up to one million shares during a 12-month period. As of February 28, 2010, the Company has not bought back any shares under this renewed repurchase program.

Item 3. Defaults Upon Senior Securities

None.

Item 4. Submission of Matters to a Vote of Security Holders

On February 19, 2010, the Registrant held its annual meeting of shareholders. The following proposals were submitted to a vote of security holders at the meeting.

1. Election of five (5) directors.

Walter Woltosz

Virginia Woltosz

Dr. David Z. D'Argenio

Dr. Richard Weiss

H. Wayne Rosenberger

2. To ratify the selection of Rose, Snyder, and Jacobs CPAs as the Company's independent public accountants.

The above proposals were approved and the results of the balloting at the meeting are summarized in the following table.

| Proposal | Votes For | Votes Against | Votes Abstaining | Votes Withheld | Total |
|-------------------------------|------------|------------------|---------------------|-------------------|------------|
| (1) Walter Woltosz | 8,594,286 | | | 500,013 | 15,499,160 |
| (1) Virginia Woltosz | 8,589,798 | | | 504,501 | 15,499,160 |
| (1) Dr. David Z. D'Argenio | 9,084,954 | | | 9,345 | 15,499,160 |
| (1) Dr. Richard Weiss | 9,084,954 | | | 9,345 | 15,499,160 |
| (1) H. Wayne Rosenberger | 9,084,954 | | | 9,345 | 15,499,160 |
| (2) | 14,305,070 | 2,046 | 17,510 | | 15,499,160 |

Item 5. Other Information
