Trading volume in Cemig's preferred shares (CMIG4) totaled R\$ 10.93 billion in full-year 2015, a daily average of R\$ 44.46 million. At this level, Cemig continues to be one of the most liquid companies in the Brazilian electricity sector, and one of the most traded in the Brazilian capital markets.

On the New York Stock Exchange, the volume traded in ADRs for Cemig's preferred shares (CIG) in full-year 2015 was US\$ 3.11 billion. We see this as reflecting recognition by the investor market of Cemig as a global investment option.

The São Paulo stock exchange Ibovespa index was down 13.31% in 2015, closing the year at 43,349 points. The negative result directly reflects Brazil's current adverse economic phase.

Cemig's shares underperformed the Ibovespa. Over the year the price of Cemig's common shares (Cemig ON) declined 51.84%, and the preferred stock (Cemig PN) was down 51.86%. A major factor adversely affecting Cemig's stock price was the conclusion, with a judgment against Cemig, of the legal action on the *Jaguara* Hydroelectric Plant in the Higher Appeal Court (STJ), even though the case has now been taken to the Federal Supreme Court on an appeal. Other factors affecting the stock price in the year included: designation by the Mining and Energy Ministry (published September 15), of Cemig GT as responsible for operation of the *São Simão* hydroelectric plant under the quota regime; the fall in electricity consumption; the water supply crisis affecting the country; and the country's macroeconomic situation.

Cemig's consolidated electricity market

The **Cemig Group** sells electricity through its distribution company, Cemig Distribuição (**Cemig D**), its generation and transmission company Cemig Geração e Transmissão (Cemig Generation and Transmission , or **Cemig GT**), and the wholly-owned subsidiaries Horizontes Energia, Termelétrica Ipatinga (up to January 2015), Sá Carvalho, Termelétrica de Barreiro, Cemig PCH, Rosal Energia and Cemig Capim Branco Energia (up to March 2015).

Total sales reported for Cemig's consolidated electricity market comprises sales to:

- (I) captive consumers in Cemig's concession area in the State of Minas Gerais;
- (II) Free Consumers in both the State of Minas Gerais and other States of Brazil, in the Free Market (*Ambiente de Contratação Livre*, or ACL);
- (III) other agents of the electricity sector – traders, generators and independent power producers, also in the ACL;
- (IV) Distributors, in the Regulated Market (*Ambiente de Contratação Regulada*, or ACR); and
- (V) the Wholesale Trading Chamber (*Câmara de Comercialização de Energia Elétrica*, or CCEE) (eliminating transactions between companies of the Cemig Group).

In 2015 this Cemig group sold a total volume of 56,903,594 MWh, which was 10.3% less than in 2014.

Overall, electricity consumption in 2015 was affected by adverse Brazilian political and economic circumstances; and, in the captive market, by the successive increases in electricity rates charged to consumers, associated with application of the Tariff Flag system resulting in significant increases in consumers' electricity invoices.

Sales to distributors, traders, other generating companies and independent power producers totaled 10,831,194 MWh or 23.4% less than in 2014.

In December 2015 the Cemig Group invoiced 8,079,771 customers a growth of 0.9% in the customer base in the year since December 2014. Of these, 8,079,719 were final consumers (including Cemig's own consumption); and 52 were other agents of the Brazilian electricity sector.

This chart shows the breakdown of sales to final consumers of the Cemig Group in the quarter, by consumer category:

Total consumption of electricity (GWh)

The volume of electricity sold to final consumers of Cemig in 2015 was 10.35% lower than in 2014.

The electricity market of Cemig D

Electricity billed to captive clients and electricity transported for Free Clients and distributors with access to Cemig D's networks totaled 42,124 GWh in 2015, or 5.3% less than in 2014.

There are two components of this reduction: Consumption by the captive market 2.1% lower in the year; and use of the network by Free Clients 10.2% lower by volume.

Overall, consumption of electricity in 2015 was affected by adverse Brazilian political and economic circumstances; and, in the captive market, by the successive increases in electricity rates charged to consumers, associated with application of the Tariff Flag system, resulting in significant increases in consumers' electricity invoices.

In December 2015 Cemig billed 8,079,645 consumers, or 0.9% more than in December 2014. Of this total, 422 are Free Consumers using Cemig D's distribution network.

Comments on the various consumer categories:

Residential

Residential consumption was 17.27% of the total volume of electricity transacted by Cemig, and totaled 9,830 GWh, or 1.84% less than in 2014.

Average monthly consumption per consumer in 2015 was 126.5 KWh/month, or 3.6% less than the average in 2014 (131.2 KWh/month) this is the first year-on-year reduction in this variable since 2008.

Industrial

Electricity used by captive industrial clients was 7.84% lower in total volume than in 2014, and the total of electricity transported for Free Clients was 10.0% lower.

The main Brazilian and international macroeconomic factors that could have influenced consumption by the industrial sector are:

- i *In Brazil:* Retraction of domestic demand, accumulation of inventories, idle manufacturing capacity, loss of competitiveness, reduction of the number of employees and/or reduction of the use of labor (e.g. forced vacations, shorter work shifts), lack of entrepreneur confidence, low levels of public and private investment, uncertainties in the Brazilian political and economic situation, high cost of corporate credit due to high interest rates, and banks being more selective in granting loans.

- i *International:* Lower exports due to lower external demand.

In manufacturing there was a reduction in consumption across all sectors led by: steel (2.0%), non-metallic minerals (7.7%), chemicals (9.6%), ferroalloys (44.6%), non-ferrous metals (10.8%), auto industry (16.1%), and textiles (11.9%).

The year-on-year comparison is affected by two factors in 2014: (i) a group of Free Clients migrated to the national grid; and (ii) some Free Clients stopped using the Cemig D network.

The electricity market of Cemig GT

One factor in Cemig GT's total sales volume in 2015 was termination of concession of plants. Following this change, payment for the output from these plants was redirected to the Physical Guarantee Quota regime, and to settlement on the spot market.

Cemig GT's market comprises sales of power as follows:

(I) sales in the Free Market, to Free Clients, in Minas Gerais or other States;

(II) sales in the Free Market to other agents in the electricity sector – traders, generators and independent power producers;

(III) sales to electricity distributors (in the Regulated Market); and

(IV) sales in the CCEE (Electricity Trading Chamber).

The total supply billed by Cemig GT in 2015 was 29,966 GWh, or 15.6% less than in 2014.

Free Clients consumed 18,832 GWh in 2015, 11.8% less than in 2014, reflecting:

i termination of contracts with clients at the end of 2014 that were not renewed with Cemig GT; and

ii reduction of consumption by clients due to weak demand in the Brazilian economy, with lower domestic demand for goods and services, also affected by the speed of recovery of the international market.

Cemig GT added 28 new free market clients in 2015, mainly outside Minas Gerais.

Trading of electricity to other agents in the electricity sector in the Free Market totaled 6,443 GWh in 2015, 24.5% less than in 2014; and the total sold in the Regulated Market was 4,690 GWh, 16.9% less than in 2014.

QUALITY INDICATORS SAIDI AND SAIFI			

Cemig is continuously taking action to improve operational management, organization of the logistics of its emergency services, and its permanent regime of preventive inspection and maintenance of substations, lines and distribution networks. It also invests in training of its staff for improvement of qualifications, state-of-the-art technologies, and standardization of work processes, aiming to uphold the quality of electricity supply, and as a result maintain the satisfaction of clients and consumers.

The charts below show Cemig's indicators for duration and frequency of outages – SAIDI (System Average Interruption Duration Index, in hours), and SAIFI (System Average Interruption Frequency Index, in number of outages), since January 2014. These results reflect the investments made by the company in preventive maintenance, such as cleaning of power line pathways, tree pruning, replacement of cross-arms, maintenance of structures, replacement of poles, transformers and cables, and other work such as network shielding, and overhaul and interconnection of circuits. Another important initiative is the change of technological level, with systematic investment in automation of the electricity system, which will enable automatic remote re-establishment of supply after outages.

Consolidated operational revenue

Revenue from supply of electricity:

Total revenue from supply of electricity to final consumers in 2015 was R\$ 22.526 billion, or 30.72% *more* than the total revenue of R\$ 17.232 billion in 2014.

Final consumers

Total revenue from electricity sold to final consumers, excluding Cemig's own consumption, was R\$ 20.319 billion in 2015 or 36.17% more than the total of R\$ 14.922 billion in 2014.

The main factors affecting revenue were:

- i The Annual Tariff Adjustment for Cemig D, with average effect of 14.76% on consumer tariffs, effective from April 8, 2014 (full effect in 2015).
- i The Extraordinary Tariff Adjustment for Cemig D, which resulted in an average impact on consumers' tariffs of 28.76%, applicable from March 2, 2015.

- j The Annual Tariff Adjustment effective from April 8, 2015, with average effect on consumer tariffs of 7.07%.
- j Creation, in 2015, of the Tariff Flag mechanism at the following rates per 100 kWh consumed: (i) as from January 2015, R\$ 1.50 per 100kWh for the *Yellow Flag* tariff, and R\$ 3.00 for the *Red Flag* tariff; (ii) as from March 2015, R\$ 2.50 per 100kWh for the *Yellow Flag* tariff and R\$ 5.50 for the *Red Flag* tariff; and finally (iii) from September 2015, R\$ 2.50 for the *Yellow Flag* tariff and R\$ 4.50 for the *Red Flag* tariff. In practice, the *Red Flag* rates were in effect for the whole of 2015.
- j Total volume of electricity sold in 2015 was 10.35% lower than in 2014.

Revenue from Use of Distribution Systems (the TUSD charge)

The revenue of Cemig D (Distribution) from the TUSD in 2015 was R\$ 1.465 billion, or 71.35% higher than in 2014 (R\$ 855 million). This reflects the impact of the tariff adjustments in 2015 – an increase of 96.21% for Free Consumers. The 2015 increases were mainly due to passing through of the CDE (Energy Development Account) amounts to the tariffs paid by consumers. The effect of the increase in tariffs was partially offset by the effect of lower activity in the industrial sector – which consumed 11.74% less electricity, year-on-year, in the period.

Revenue from transactions in the Wholesale Trading Chamber (CCEE)

Revenue from transactions in electricity on the CCEE was R\$ 2.425 billion in 2015, compared to R\$ 2.348 billion in 2014 – an increase of 3.28%. The components of this figure were: Higher total volume sold, at 7,157,641 MWh in 2015 compared to 3,354,224 MWh in 2014; and the Spot Price (*Preço de Liquidação de Diferenças* – PLD) in the wholesale market 58.31% lower (at R\$ 287.20/MWh in 2015, vs. R\$ 688.89/MWh in 2014).

CVA and Other financial components in the tariff adjustment calculation

Due to the alteration in the concession contracts of the distributors, Cemig started to recognize certain balances of non-controllable costs to be passed through to Cemig D's next tariff adjustment – these represented an operational revenue of R\$ 1.704 billion in 2015, compared to R\$ 1.107 billion in 2014.

Revenue from supply of gas

Cemig reports revenue from supply of gas totaling R\$ 1.667 billion in 2015, compared to R\$ 422 million in 2014 – an increase of 295.02%. The variation basically reflects the fact that figures for Gasmig began to be consolidated into Cemig's results in October 2014.

Taxes and charges applied to Revenue

The sector charges that are effectively deductions from reported revenue were 105.28% higher in 2015, at R\$ 11.549 billion – compared to R\$ 5.626 billion in 2014. The increase mainly reflects the higher charges under the Energy Development Account (CDE), and also the Tariff Flag charges.

The Energy Development Account – CDE

Payments to the Energy Development Account (CDE) are decided by an Aneel Resolution. The expenses included are: concession indemnities, tariff subsidies, the subsidy for balanced tariff reduction, the low-income consumer subsidy, the coal consumption subsidy, and the Fuels Consumption Account (CCC).

Charges for the CDE in 2015 were R\$ 2.870 billion, compared to R\$ 211 million in 2014. This is the result of the new budget for the CDE in 2015, in which Aneel increased the annual amount to be paid by Cemig D, which is passed through to the consumer in the Sector Charges component of tariffs.

Consumer charges the Tariff Flag system

In 2015, with the Tariff Flag mechanism coming into force, Cemig had an account under Consumer Charges related to the Tariff Flag payments, totaling R\$ 1.067 billion.

The Flag Account (*Conta Bandeira*) was created on February 5, 2015, to manage the funds collected from captive customers of utilities holding electricity distribution concessions and permissions these funds are paid, on account of the CDE, directly to the Flag Account. The Wholesale Trading Chamber (CCEE) passes the proceeds through to distribution agents, based on the difference between the realized amounts of costs of thermal generation and the exposure to spot prices, and the amount covered by the tariff.

The other deductions from revenue are taxes, calculated as a percentage of amounts invoiced. Thus their variations are, substantially, proportional to the changes in revenue.

Operational costs and expenses

Operational costs and expenses, excluding Financial revenue (expenses), totaled R\$ 18.318 billion in 2015, compared to R\$ 14.451 billion in 2014 an increase of 26.76%.

The following paragraphs comment on the main variations:

Electricity purchased for resale

The expense on electricity bought for resale in 2015 was R\$ 9.542 billion, or 28.46% more than in 2014 (R\$ 7.428 billion). Over the course of 2015, this cost has been more than 50% of the Company's total costs. The main factors in the higher figure are:

Cemig D:

- i Expense on electricity acquired in auctions 20.74% higher, at R\$ 4.098 billion, in 2015, compared to R\$ 3.394 billion in 2014 arising mainly from availability contracts, due to the expenditure on fuel for generation by the thermal plants.

- i Expense on electricity from Itaipu Binacional was 108.92% higher. This amount is indexed to the US dollar, and was R\$ 1.734 billion in 2015, compared to R\$ 830 million in 2014. This reflects both an increase in the tariff which was US\$ 26.05/kW-month in 2014, and rose to US\$ 38.07/kW-month as from January 2015 and also the increase in the dollar exchange rate against the Real from 2014 to 2015. The average exchange rate used for the dollar in invoices in 2015 was R\$ 3.38, compared to R\$ 2.35 in 2014 an increase of 43.83%.

- i Purchases of supply in the short-term market were 24.67% lower at R\$ 849 million in 2015, compared to R\$ 1.127 billion in 2014, due to the lower cost of electricity in the wholesale market in 2015.

Cemig GT:

The expense on electricity bought for resale in 2015 was R\$ 2.601 billion, or 53.72% more than in 2014 (R\$ 1.692 billion). The difference mainly reflects electricity bought for resale 48.10% higher in 2015 (at 15,273,685 MWh), than in 2014 (10,313,226 MWh) reflecting lower generation capacity, with the termination of the concessions of some plants.

Operational provisions

Operational provisions in 2015 totaled R\$ 1.401 billion, compared to R\$ 581 million in 2014, an increase of 141.14%. This change mainly reflected a provision of R\$ 1.079 billion made in 2015 for losses relating to the put options for the equity interests in Parati and a provision of R\$ 119 million for SAAG Santo Antonio Investment.

a) Put options for Units in FIP Melbourne

Option contracts for sale of Units (put options) were signed between Cemig GT and the pension plan entities that participate in the investment structure of SAAG, which those entities may exercise in the 84th month from June 2014. The exercise price of the put options will correspond to the amount invested by each pension plan company in the Investment Structure, updated *pro rata temporis* by the IPCA inflation index (*Índice Nacional de Preços ao Consumidor Amplo*, published by the Brazilian Geography and Statistics Institute - IBGE), plus 7% per year, less such dividends and Interest on Equity as have been paid by SAAG to the pension plan entities.

To decide the method to be used for measuring the fair value of the put options, since Madeira Energia is an unlisted company, the Company adopted the discounted cash flow method to measure the fair value of those options. The fair value of this option has been calculated on the basis of the estimated exercise price on the day of exercise of the option, less the fair value of the shares that are the subject of the put option, also estimated for the date of exercise, brought to present value at the interim reporting date, at the effective rate of 8% p.a. (discounting inflation effects). Based on the studies made, the amount of R\$ 148 million is recorded in Cemig GT as the best estimate of the loss on these options.

b) FIP Redentor

Cemig has granted to Fundo de Participações Redentor, which is a stockholder of Parati, an option to sell the totality of the shares which that fund holds in Parati, exercisable in May 2016. The price of the option is calculated using the sum of the value of the injections of capital by the fund into Parati, plus the running expenses of the fund, less any Interest on Equity, and dividends, distributed by Parati. The exercise price is subject to monetary updating by the CDI (Interbank CD) Rate plus financial remuneration at 0.9% per year.

For the purposes of determining the method to be used to measure the fair value of this option, the Company observed the daily trading volume of the shares of Light, and also the fact that such option, if exercised by the Fund, will require the sale to the Company, in a single transaction, of shares in Light in a quantity higher than the daily exchange trading averages. Thus, the Company has adopted the discounted cash flow method for measurement of the fair values of the option. The fair value of this option has been calculated on the basis of the estimated exercise price on the day of exercise of the option, less the fair value of the underlying shares, also estimated for the date of exercise, brought to present value at the interim reporting date, at the effective rate of 7.5% p.a. (discounting inflation effects).

Based on the studies carried out, a liability in the amount of R\$ 1.245 billion has been recorded in the financial statements, for the best estimate of the loss on this option.

Personnel

Personnel expenses were R\$ 1.435 billion in 2015, compared to R\$ 1.252 billion in 2014, an increase of 14.62%. This arises mainly from the following items:

- ; Salary increases, under the Collective Agreement, of 6.34%, coming into effect in November 2014 (full effect in 2015).
- ; Salary increases of 3% from March 2015, as a result of the collective negotiation decided by the courts on application from organizations representing the employees.
- ; Salary adjustments applied at the 10.33%, from November 2015, under the Collective Agreement.

Gas bought for resale

The expense that Cemig reports for *Gas bought for resale* was R\$ 1.051 billion in 2015, vs. R\$ 254 million in 2014. Cemig started consolidating the results of Gasmig in October 2014, after Cemig acquired the 40% interest in Gasmig held by Petrobras.

Raw materials and inputs for production of electricity

The expense on raw material and inputs for production of electricity in 2015 was R\$ 84 million, compared to R\$ 282 million in 2014 – a reduction of 70.21%. This reflects the temporary stoppage of the Igarapé thermal plant in 2015, due to the need for maintenance and installation of new equipment, and the federal government's decision to stop generation by thermal plants that have the highest Variable Unit Cost (CVU).

Financial revenue (expenses)

Cemig reports net financial expenses of R\$ 735million in 2015, compared to net financial expenses of R\$ 1.101 billion in 2014. The main factors are:

- i Recognition, as from 2015, of the foreign exchange variation and monetary updating on the balances of the CVA and the *Other financial components* elements of tariff adjustments, representing and increase in financial revenue of R\$ 68 million in 2015.

- j A higher gain on updating of financial assets of the Remuneration Base of Assets (*Base Regulatória de Remuneração*, or BRR): R\$ 606 million in 2015, vs. R\$ 58 million in 2014. In November 2015 Aneel ordered an alteration of the index of the BRR, from the IGP-M inflation index to the IPCA inflation index. This change generated an updating adjustment backdated to January 2013. The effect of this change in financial revenue recorded in December 2015 was R\$ 143 million. This difference also arises from the higher variation in the present index of the BRR – the IPCA index – which was 10.67% in 2015, compared to variation of 3.69% in the IGP-M index in 2014. Additionally, in June 2014 there was a reversal in the monetary updating of the BRR, totaling R\$ 110 million, due to the final, definitive, homologation of the value of the BRR of Cemig D.

- j Recognition, starting in 2015, of monetary updating on deposits linked to legal actions, representing a gain in financial revenue of R\$ 212 million in 2015.
- j Higher expenses of exchange rate variations on loans and financings, and on Itaipu Binacional, which totaled R\$ 172 million in 2015, vs. R\$ 26 million in 2014. This mainly reflects the effects on Cemig D of the higher variation of the US dollar in 2015 (47.01% in full-year 2015, compared to 13.39% in 2014);
- j Charges for loans and financings 48.44% higher, at R\$ 1.382 billion in 2015, compared to R\$ 931 million in 2014. This mainly reflects higher debt indexed to the CDI Rate; and also the higher CDI rate itself, in 2015 representing 13.23% in the year, compared to 10.81% in 2014.
- j Expense on monetary updating of loans and financings 42.80% higher, at R\$ 387 million in 2015, compared to R\$ 271 million in 2014. This is mainly the effect of higher variation in the IPCA inflation index in the period (10.67% in 2015, compared to 6.41% in 2014).

Ebitda

Cemig's consolidated Ebitda in 2015 was 22.36% lower than in 2014. This mainly reflects operational costs and expenses (excluding depreciation and amortization) 28.08% higher in 2015 – an outstanding element of this expense being provisions totaling R\$ 1.198 billion for losses on investments.

Generation plants: Concession contract expiry periods

In November 2015 Cemig was the winner of Lot D in the first auction of concessions held by Aneel with a new structure: placement of concessions for hydroelectric plants under a regime of allocation of generating capacity and physical offtake guarantees.

- ; Number of generation plants: 18 (eighteen).
- ; Total installed generation capacity: 699.57 MW.
- ; Percentage of the guaranteed physical power offtake allocated to the Regulated Market: 100% (one hundred per cent), from January 1 to December 31, 2016; and 70% (seventy per cent), on and after January 1, 2017.
- ; Payment: R\$ 2.216 billion in Concession Grant Fee (Bonificação pela Outorga), of which R\$ 1.4 billion (65%) was paid on January 5, 2016 and R\$ 770 million is to be paid within 180 days.
- ; Revenue received by Cemig GT for provision of the service: R\$ 498.6 million/year.

Under that contract, as from this termination the assets of each plant that had not been fully depreciated are to be returned to the concession-granting power, and the company is to be indemnified for them, on terms specified in the contract. The accounting balances corresponding to these assets, including the Deemed Cost, were transferred from Fixed assets to Financial assets on the date of termination of the concession in July 2015, and total R\$ 546 million.

As specified in Aneel Normative Resolution 615/2014, the Valuation Opinions proposing the amounts of the indemnification of the assets were delivered to Aneel on December 31, 2015. The company is in the process of preparation of these Opinions. Based on the discussions and valuations currently in progress, management believes that there is no indication that the amounts to be indemnified by the Grantor Power will be lower than those recognized in its interim financial statements at December 31, 2015

Electricity losses 4Q15

Control of electricity losses is one of Cemig D's strategic objectives, and the Company has a structure dedicated to this its *Distribution Losses Measurement and Control Management Unit*. Compliance with the objective is monitored monthly through the Total Distribution Losses Index (*Índice de Perdas Totais da Distribuição*, or IPTD): the result at December 31, 2015 was 11.52% compared to a regulatory target of 10.48% by the end of 2017. In the decision on the regulatory target, taken during the 3rd Tariff Review Cycle, the regulator, Aneel, made significant changes in the method of calculation of technical losses, imposing extremely challenging limits for Cemig D. Total losses are composed of technical losses plus non-technical losses. The indicators for measurement are the PPTD (Distribution Technical Losses Percentage *percentual de perdas técnicas da distribuição*), and the PPNT (Distribution Non-technical Losses Percentage *or percentual de perdas não técnicas da distribuição*). The projected result for the PPTD on December 31, 2015 was 9.46%, for a regulatory target of 7.84 %, and the projected result for the PPNT was 3.06%, for a regulatory target of 2.64%.

Aneel measures non-technical losses with reference to the low-voltage market. Taking this into account, the result for the PPNT in relation to the low voltage market as invoiced at December 31, 2015 was 7.85%, for a regulatory target of 7.63% (2.88% above the limit set by the Regulator).
