ASIAINFO HOLDINGS, INC.
NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (unaudited)
Nine Months Ended September 30, 2000 and 2001
(In US dollars except shares)

1. GENERAL AND BASIS OF PREPARATION

AsiaInfo Holdings, Inc. (the "Company") was incorporated in the State of Texas, in the United States, on June 17, 1993 and was subsequently reincorporated in the State of Delaware in June 1998. The Company currently operates through the following subsidiaries: AsiaInfo Technologies (China), Inc. ("AI Technology") (100% owned), Zhejiang AsiaInfo Telecommunication Technology Co., Ltd. ("AI Zhejiang") (100% owned) and Guangdong Wangying Information Technology Co., Ltd. ("Wangying") (40% owned, but controlled by the Company), all incorporated in the People's Republic of China ("China" or the "PRC") and Marsec Holdings, Inc. ("Marsec") (79% owned), incorporated in the Cayman Islands.

On March 2, 2000, the Company completed an initial public offering of 5,750,000 shares of its common stock, raising net proceeds of \$126.6 million. The Company's common stock is traded on The Nasdaq National Market in the United States.

The Company acts as a holding company and sources computer related equipment in the U.S. for sale to customers in the PRC.

AI Technology was established as a wholly foreign owned enterprise with an initial operating term of 15 years commencing May 2, 1995 (date of establishment). Its principal activities are conducted in the PRC and comprise the provision of telecommunications-related information technology professional services and software products.

AI Zhejiang has an initial operating term of 15 years commencing April 5, 1995 (date of establishment). Its activities are performed in the PRC and comprise the development and sale of communication hardware and software, as well as providing related technology services. In connection with its acquisition in April 1999, the Company recorded goodwill of approximately \$4.7 million, which is being amortized over 5 years. AI Zhejiang's results of operations are included in the Company's financial statements from the date of acquisition. In March 2001, the Company commenced the process of merging AI Zhejiang into AI Technology.

Wangying was established on September 6, 2000 with an initial operating term of 4 years for a particular customer project in the PRC.

Marsec, through its wholly owned subsidiary, provides network security

Edgar Filing: ASIAINFO HOLDINGS INC - Form 10-Q

consulting and services in the PRC.

On April 27, 2001, the Company invested approximately \$6 million acquiring 14.25% of equity interest of Intrinsic Technology (Holdings), Ltd., a company registered in Cayman Islands and engaged in wireless Internet application and development through its two wholly owned subsidiaries in the PRC.

On September 14, 2001, the Company exercised its warrants to purchase 200,000 shares at US\$3.5 a share increasing its investment in Marsec from 75% to 79%.

The consolidated financial statements of the Company include the accounts of the Company and its subsidiaries. Intercompany transactions and balances have been eliminated. Investments in 50% or less owned affiliates over which the Company

-8-

ASIAINFO HOLDINGS, INC.
NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (unaudited)
Nine Months Ended September 30, 2000 and 2001
(In US dollars)

exercises significant influence, but not control, are accounted for using the equity method.

In the Company's opinion, all adjustments necessary for a fair presentation of the unaudited results of operations for the three and nine months ended September 30, 2000 and 2001 are included. All such adjustments are accruals of a normal and recurring nature. The results of operations for the periods are not necessarily indicative of the results of operations for the full year. The financial statements are unaudited.

Revenue from network solutions contracts, which includes the procurement of hardware on behalf of customers, systems design, planning, consulting, and system integration is recognized based on the percentage of completion method. Labor costs and direct project expenses are used to determine the stage of completion except for revenues associated with the procurement of hardware. Such hardware-related revenues are recognized upon delivery.

Software revenues represent license fees and related services which allow customers to use the Company's software products in perpetuity up to a maximum number of users. Contract revenue from software license fees and software implementation services, which generally represent customer orders requiring significant production, modifications, or customization of the software, is recognized in conjunction with the revenues of the related solutions project over the installation and customization period based on the percentage of completion of the project as measured by labor costs and direct project expenses. Software revenues include the benefit of the rebate of value added taxes on sales of software received from the tax authorities as part of the PRC government's policy of encouragement of software development in the PRC. The rebate was approximately \$441,000 and \$759,000 for the three months ended September 30, 2000 and 2001, respectively, and \$982,000 and \$2,454,000 for the nine months ended September 30, 2000 and 2001, respectively.

Revenue in excess of billings on service contracts is recorded as unbilled receivables and included in trade accounts receivable, and amounted to \$33,241,532 at December 31, 2000 and \$50,972,140 at September 30, 2001. Billings in excess of revenues recognized on service contracts are recorded as deferred revenue until revenue recognition criteria are met. At December 31, 2000 and September 30, 2001, the balance of trade account receivables of \$22,355,964 and \$29,987,803, respectively, represented amounts billed but not yet collected. All billed and unbilled amounts are expected to be collected

Edgar Filing: ASIAINFO HOLDINGS INC - Form 10-Q

within 1 year.

The preparation of financial statements in conformity with generally accepted accounting principles requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at December 31, 2000 and September 30, 2001 and the reported amounts of revenues and expenses during the three and nine months ended September 30, 2000 and 2001. Actual results could differ from those estimates.

The financial records of the Company's PRC subsidiaries are maintained in Renminbi. The Renminbi is not fully convertible into United States dollars or other foreign currencies. The rate of exchange quoted by the People's Bank of China on September 30, 2001 was US\$1.00=RMB8.2769. No representation is made

-9-

ASIAINFO HOLDINGS, INC.
NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (unaudited)
Nine Months Ended September 30, 2000 and 2001
(In US dollars)

that the Renminbi amounts could have been, or could be, converted into United States dollars at that rate or at any other rate.

In June 1998, the Financial Accounting Standards Board issued the Statement of Financial Accounting Standards ("SFAS") No. 133, "Accounting for Derivative Instruments and Hedging Activities", which was amended by SFAS No.137 and SFAS No.138. SFAS No.133, as amended, requires companies to record all derivatives on the balance sheet as assets or liabilities measured at fair value. Gains and losses resulting from changes in fair market values of those derivative instruments are accounted for depending on the use of the instrument and whether it qualifies for hedge accounting. SFAS No.133, as amended, was adopted by the Company on January 1, 2001. Adoption of SFAS No. 133 did not have a significant effect on the Company's financial position, results of operations or cash flows.

In July 2001, the Financial Accounting Standards Board issued SFAS No.141, "Business Combination". SFAS No.141 requires the purchase method of accounting for business combinations initiated after June 30, 2001 and eliminates the pooling-of-interests method. The Company does not believe that the adoption of SFAS No.141 will have a significant impact on its financial statements.

In July 2001, the Financial Accounting Standards Board issued SFAS No.142, "Goodwill and Other Intangible Assets", which is effective January 1, 2002. SFAS No.142 requires, among other things, the discontinuance of goodwill amortization. In addition, the standard includes provisions for the reclassification of certain existing recognized intangibles as goodwill, reassessment of the useful lives of existing recognized intangibles, reclassification of certain intangibles out of previously reported goodwill and the identification of reporting units for purposes of assessing potential future impairment of certain intangible assets, including goodwill. SFAS No.142 also requires the Company to complete a transitional goodwill impairment test six months from the date of adoption. The Company is currently assessing but has not yet determined the impact of SFAS No.142 on its financial position and results of operations.

In August 2001, the Financial Accounting Standards Board issued Statement of Financial Accounting Standards No. 143, "Accounting for Asset Retirement Obligation", that addresses the accounting for the recognition of obligations associated with the retirement of tangible long-lived assets. SFAS No. 143 is effective for financial statements issued for years beginning after June 15,

Edgar Filing: ASIAINFO HOLDINGS INC - Form 10-Q

2002. In October 2001, the Financial Accounting Standards Board issued Statement of Financial Accounting Standards No. 144, "Accounting for the Impairment or Disposal of Long-Lived Assets", effective for fiscal years beginning after December 15, 2001. SFAS No. 144 addresses the financial accounting and reporting requirements for the impairment or disposal of long-lived assets and discontinued operations. SFAS No. 144 applies to all recorded long-lived assets that are held for use or that will be disposed of, but excludes goodwill and other intangible assets that are not amortized. Management is currently assessing the impact, if any, the adoption of these standards will have on the Company's financial statements.

Information concerning the organization and business of the Company, accounting policies followed by the Company and other information is contained in the notes to the Company's financial statements for the year ended December 31, 2000

-10-

ASIAINFO HOLDINGS, INC.
 NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (unaudited)
 Nine Months Ended September 30, 2000 and 2001
 (In US dollars except share)

prepared as part of the Company's Form 10-K filed with the Securities and Exchange Commission on March 16, 2001. This report should be read in conjunction with such financial statements.

2. CASH AND CASH EQUIVALENTS

Cash and cash equivalents consist of cash on hand, demand deposits, money market funds and highly liquid investments, which are unrestricted as to withdrawal or use, and which have maturities of three months or less when purchased.

3. SHORT-TERM INVESTMENTS

Short-term investments are classified as available for sale and consist principally of certificates of deposit issued by major financial institutions which have maturities of between 3 and 12 months. As there are no significant market price movements, such investments are held at cost and accrued interest. There were no realized or unrealized gains or losses.

4. COMPREHENSIVE (LOSS) INCOME

The components of comprehensive (loss) income for the periods presented are as follows:

	Three Months Ended September 30,	
	2000	2001
	(unaudited)	
Net income.....	\$ 415,408	\$3,518,612
Change in cumulative translation adjustment	(1,030)	2,126
Comprehensive income.....	\$ 414,378	\$3,520,738

Edgar Filing: ASIAINFO HOLDINGS INC - Form 10-Q

	Nine Months Ended September 30,	
	2000	2001
	-----	-----

Comprehensive (loss) income.....	\$(3,769,016)	\$7,483,717
	=====	=====

5. SHORT-TERM BANK LOANS

As of September 30, 2001, the Company had total short-term credit facilities totaling \$24.2 million expiring by June 2002. All of these facilities were for working capital purposes. At September 30, 2001, unused short-term credit facilities were \$11.7 million and used facilities totaled \$12.5 million of which \$8.3 million was used for issuing a letter of credit. Additional borrowings of approximately \$12.5 million were secured by bank deposits of \$13.1 million. All the borrowings were in RMB, the currency of the PRC. The loans carry interest of 5.58% per annum and are repayable within one year. Additional bank deposits totaling \$2.3 million were used for issuing a letter of credit. Bank deposits pledged as security for the bank loans, short-term credit facilities and issuing

-11-

(In US dollars except shares)

a letter of credit totaled \$26.7 million and \$25.8 million as of December 31, 2000 and September 30, 2001, respectively, and are presented as restricted cash in the condensed consolidated balance sheets.

6. INVESTMENT IN AFFILIATE

In April 2001, the Company invested \$6,157,376 in Intrinsic Technology (Holdings), Ltd. ("Intrinsic") for a 14.25% equity interest. The excess of purchase price over the Company's percentage interest in the recorded amount of the net assets of Intrinsic as of the acquisition date is \$5,631,124. The period of amortization for the goodwill is five years based on the estimated useful life. The Company's share of loss of the affiliate of \$319,776 and \$576,111 for the three and nine months ended September 30, 2001, respectively, includes amortization of goodwill in the amount of \$281,556 and \$469,260 for the three and nine months ended September 30, 2001, respectively. In connection with the investment, the Company also received warrants from Intrinsic that will entitle the Company and its co-investors to acquire a controlling interest in Intrinsic. The investment in Intrinsic is recorded using equity method because the Company is able to exercise significant influence over the operating and financial policies of Intrinsic through its representation on the Board. Intrinsic and its wholly owned subsidiaries are engaged in wireless Internet application and development. The Company's net investment in affiliate at September 30, 2001 was \$5.6 million.

7. CAPITAL STOCK

Edgar Filing: ASIAINFO HOLDINGS INC - Form 10-Q

Option activity in the Company's stock option plans is summarized as follows:

	Outstanding options	
	Number of shares	weighted average exercise price per share

	(unaudited)	
Outstanding, January 1, 2001:	8,781,865	\$ 9.43

For the three and nine months ended September 30, 2000, all of the Company's revenues were derived from sales to customers in the PRC. For the three and nine months ended September 30, 2001, more than 90% of the Company's revenues were derived from sales to customers in the PRC. Revenues are attributed to the country based on the installation of hardware, software and performance of system integration work and software related service. Also, as of December 31, 2000 and September 30, 2001, 99% of the Company's long-lived assets are located in the People's Republic of China.

During 2001, the Company included as a component of software revenues the software service revenue that had previously been included as a component of network solutions revenue. Such change in classification is consistent with the Company's current internal reporting structure.

-15-

ITEM 2. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

Except for historical information, the statements contained in this Quarterly Report on Form 10-Q are forward-looking statements within the meaning of Section 27A of the Securities Act of 1933 and Section 21E of the Securities Exchange Act of 1934. The Private Securities Litigation Reform Act of 1995 (the "Reform Act") contains certain safe harbors regarding forward-looking statements. Certain of the forward-looking statements include management's expectations, intentions and beliefs with respect to our growth, our operating results, the nature of the industry in which we are engaged, our business strategies and plans for future operations, our needs for capital expenditures, capital resources and liquidity; and similar expressions concerning matters that are not historical facts. Such forward-looking statements are subject to risks and uncertainties that could cause actual results to differ materially from those expressed in the statements. All forward-looking statements included in this document are based on information available to us on the date hereof, and we assume no obligation to update any such forward-looking statements. These cautionary statements are being made pursuant to the provisions of the Reform Act with the intention of obtaining the benefits of the safe harbor provisions

Edgar Filing: ASIAINFO HOLDINGS INC - Form 10-Q

of the Reform Act. Among the factors that could cause actual results to differ materially are the factors discussed below under the heading "Factors Affecting our Operating Results and our Common Stock."

OVERVIEW

We are a leading China-based company providing world class software products and network solutions. Our software products and network solutions enable our customers to build, maintain, operate and continuously improve their Internet and telecommunications infrastructure.

We commenced our operations in Texas in 1993 and moved our operations from Texas to China in 1995. We began generating significant network solutions revenues in 1996 and significant software license revenues in 1998. While we source hardware for our customers through our U.S. parent company, AsiaInfo Holdings, Inc., we conduct the bulk of our business through our wholly-owned operating subsidiary, AsiaInfo Technologies (China) Inc., which is a Chinese company.

Sales to China Telecom and its provincial subsidiaries accounted for approximately 98%, 84% and 34% of our gross revenues in fiscal 1998, 1999 and 2000, respectively. Our customer base is continuing to diversify and, at September 30, 2001, approximately 31% of our backlog net of hardware costs was attributable to China Telecom, while 46% was attributable to China Unicom, 4% was attributable to China Netcom and 10% was attributable to China Mobile.

We expect our business to continue to evolve as the Internet and telecommunications markets in China change and expand. Over the past several years, sales of software products have been an increasingly significant contributor to our business, accounting for 38.3% of revenues net of hardware costs in the three-month period ended September 30, 2001.

We also believe that there are opportunities for us to expand into new business areas. For example, as of September 30, 2001, we had invested a total of \$2.7 million in our majority-owned network security business, Marsec Holdings, Inc., which focuses on high-end security services for our customers. Marsec generated sales orders net of hardware costs of approximately \$2.4 million in the nine months ended September 30, 2001, and we anticipate that it will generate total sales orders net of hardware costs of approximately \$3 million in 2001.

-16-

Marsec's operating results are consolidated with our operating results for financial reporting purposes.

On April 27, 2001, we invested approximately \$6 million to acquire a 14.25% equity interest in Intrinsic Technology (Holdings), Ltd., a company organized in the Cayman Islands and engaged in wireless Internet application and development through its two wholly owned subsidiaries in China. We account for our interest in Intrinsic using the equity method.

REVENUES

Our total revenues have grown from \$44.2 million in 1998 to \$60.3 million in 1999 and \$176.1 million in 2000. We generate our revenues from our two principal business lines: network solutions and software products. Although we account for our network solutions revenues on a gross basis, inclusive of hardware acquisition costs that are passed through to our customers, we manage our business internally based on revenues net of hardware costs, which is consistent with our strategy to focus increasingly on providing our customers with high value IT professional services while gradually outsourcing lower-end services such as hardware acquisition and installation. This strategy may

Edgar Filing: ASIAINFO HOLDINGS INC - Form 10-Q

result in lower growth rates for total revenues as against prior periods, but will not adversely impact revenues net of hardware costs. The following table shows our revenue breakdown by business line on this basis:

BUSINESS LINE	NINE MONTHS ENDED SEPTEMBER 30,		YEAR ENDED DECEMBER 31,			
	2001	2000	2000	1999	1998	1997
Network solutions net of hardware costs	58%	62%	61%	74%	88%	93%
Software	42%	38%	39%	26%	12%	7%
Total revenues net of hardware costs	100%	100%	100%	100%	100%	100%

As demonstrated by the foregoing table, software revenues have accounted for an increasing portion of our total revenues net of hardware costs over the past several years, increasing from 11% in 1996 to 42% in the first three quarters of 2001.

BACKLOG. Most of our revenues are derived from customers' orders under separate binding contracts for hardware, network solutions and software products. These contracts constitute our backlog at any given time. Revenues for hardware, network solutions and software products are recognized during the course of the relevant project, as described in more detail below. At September 30, 2001, our revenue backlog net of hardware costs was \$46.8 million, 64% of which related to network solutions and 36% of which related to software. Our revenue backlog net of hardware costs represents a 37% increase over backlog one year ago, and provides clear revenue visibility into the next two quarters.

NETWORK SOLUTIONS REVENUES. Network solutions revenues consist of hardware sales for equipment procured by us on behalf of our customers from hardware vendors, as well as services for planning, design, systems integration and training. We procure for and sell hardware to our customers as part of our total solutions strategy. We minimize our exposure to hardware risks by sourcing equipment from hardware vendors against letters of credit from our customers. We believe that, as the Internet-related market in China develops,

-17-

our customers will increasingly purchase hardware directly from hardware vendors and pay us separately for the full value of our professional services.

We generally charge a fixed price for our network solutions projects and recognize revenue based on the percentage of completion of the project. We use labor costs and direct project expenses to determine the stage of completion, except for revenues associated with the procurement of hardware on behalf of the customer. We recognize such hardware-related revenues upon delivery. Since a large part of the cost of a network solutions project often relates to hardware, the timing of hardware delivery can cause our quarterly gross revenues to fluctuate significantly. However, these fluctuations do not significantly affect our gross profit because hardware-related revenues generally approximate the costs of the hardware.

Edgar Filing: ASIAINFO HOLDINGS INC - Form 10-Q

Network solutions projects generally have a life of nine to twelve months, during which there are three key milestones. The first milestone occurs when the hardware is delivered, which is usually between three and four months after signing the contract. The second milestone in a network solutions project is at primary acceptance, which usually occurs around five months after hardware delivery. The third milestone is final acceptance, which occurs when the customer agrees that we have satisfactorily completed all of our work on the project.

SOFTWARE REVENUES. In the second quarter of 2001, we began including in software revenues two types of revenues: software license revenue and software service revenue. Software service revenue had been previously included in network solutions revenue. Software license revenues consist of fees received from customers for licenses to use our software products in perpetuity, up to a specified maximum number of users. Our customers must purchase additional user licenses from us when the number of users exceeds the specified maximum. Our software license revenues also include the benefit of value added tax rebates on software license sales, which are part of the Chinese government's policy of encouraging China's software industry. Software service revenue consists of revenues from software installation, customization, training and other services. To date, substantially all of our revenue from both software licenses and software services has been contract-related, meaning that it has been derived from customer orders requiring some modifications or customization of our software. We recognize all software revenue that is contract-related over the installation and customization periods, based on the percentage of completion of the project as measured by labor costs and direct project expenses. Substantially all of our software revenues are derived from our customer management and billing, network management and messaging software products.

The foregoing network solutions and software revenue recognition policies result in our recognizing certain revenues even though we are not due to receive the corresponding cash payment under the contract. In the case of hardware sales, the customer typically holds back around 10 to 15% of the hardware contract amount at the time of delivery. In the case of services, while there may be some down payment, most of the revenues becomes billable at the time of primary acceptance. The unpaid amounts for hardware and services become payable at the time of final project acceptance, when payment of all unpaid contract amounts is due. When we recognize revenues for which payments are not yet due, we book unbilled accounts receivable until the corresponding amounts become payable.

COST OF REVENUES

NETWORK SOLUTIONS COSTS. Network solutions costs consist primarily of third party hardware costs, compensation and travel expenses for the professionals involved in designing and implementing projects, and hardware warranty costs.

-18-

We recognize hardware costs in full upon delivery of the hardware to our customers. In order to minimize our working capital requirements, we generally obtain from our hardware vendors payment terms that are timed to permit us to receive payment from our customers for the hardware before our payments to hardware vendors are due. However, in certain recent large projects, we obtained less favorable payment terms from our customers, thereby increasing our working capital requirements. We recognize compensation and travel costs for project professionals as incurred. We accrue hardware warranty costs when hardware revenue is fully recognized upon final acceptance. We obtain manufacturers' warranties for hardware we sell, which cover a portion of the warranties that we give to our customers. We currently accrue 0.8% of hardware sales to cover potential warranty expenses. This estimate of warranty cost is based on our

Edgar Filing: ASIAINFO HOLDINGS INC - Form 10-Q

current experience with contracts for which the warranty period has expired.

SOFTWARE COSTS. Software license costs consist primarily of packaging and written manual expenses. The costs associated with creating and enhancing software are classified as research and development expenses as incurred. Software implementation services costs consist primarily of compensation and travel expenses for the professionals involved in modifying, customizing or installing our software products and in providing consultation, training and support services.

OPERATING EXPENSES

Operating expenses are comprised of sales and marketing expenses, research and development expenses, general and administrative expenses, and amortization expenses for goodwill and deferred stock compensation.

Operating expenses consist for the most part of compensation expenses, which have risen as we have expanded and hired new personnel. Although we review salaries on an annual basis in order to ensure that we remain competitive with the market, we do not foresee the need to make material increases in the near term. However, we may be required to do so from time to time in the future.

Research and development expenses relate almost entirely to the development of new software and the enhancement and upgrading of existing software. We expense these costs as they are incurred.

We provide most of our officers, employees and directors, with stock options. In the past, we granted a number of options with exercise prices below the fair market value of the related shares at the time of grant, resulting in our incurring deferred compensation expenses. Most of the options granted with exercise prices below fair market value on the date of grant were issued prior to 1997. We do not, however, intend to issue options below fair market value in the future. Therefore, our deferred compensation expenses have been significantly higher historically than we expect them to be in future years. The difference between the exercise price and the fair market value of the related shares is amortized over the vesting period of the options and reflected on our income statement as amortization of deferred stock compensation. See note 13 to our consolidated financial statements for the year ended December 31, 2000, included in our annual report on Form 10-K, filed with the Securities and Exchange Commission on March 16, 2001.

We make bad debt provisions for accounts receivable balances based on management's assessment of the recoverability of revenues in accordance with the aging of the accounts receivable. Because our client base is continually expanding to include smaller telecommunications and Internet service providers, we revisit our estimates on collectibility on a periodic basis.

-19-

TAXES

Except for hardware procurement and resale, we conduct substantially all of our business through our Chinese operating subsidiaries. Our Chinese subsidiaries are generally subject to a 30% state corporate income tax and a 3% local income tax. AsiaInfo Technologies, our principal operating subsidiary, is classified as a "high technology" company for purposes of Chinese tax law and, as such, is entitled to preferential tax treatment in China. AsiaInfo Technologies operated free of Chinese state corporate income tax for three years, beginning with its first year of operation, and was entitled to a 50% tax reduction for the subsequent three years. The tax holiday for AsiaInfo Technologies expired on December 31, 1997 and the 50% tax reduction expired on December 31, 2000.

Edgar Filing: ASIAINFO HOLDINGS INC - Form 10-Q

However, AsiaInfo Technologies recently received a continuation of its preferential tax treatment from the local government for an additional three years, which will reduce its effective income tax rate to not less than 10%. In 2001, we anticipate that the effective corporate income tax rate applicable to AsiaInfo Technologies will be 10%. Changes in Chinese tax laws may adversely affect our future operations.

Sales of hardware in China are subject to a 17% value added tax. Most of our hardware sales are made through our U.S. parent company and thus are not subject to the value added tax. We effectively pass these taxes through to our customers and do not include them in revenues reported in our financial statements. Sales of software in China are subject to a 17% value added tax. However, if the net amount of the value added tax payable exceeds 3% of software sales, the excess portion of the value added tax can be refunded immediately. The Company therefore enjoys an effective net value added tax burden of 3% on software license revenues. This policy is effective until 2010.

We are also subject to U.S. income taxes on revenues generated in the U.S., including revenues from our hardware procurement activities in the U.S. and interest income earned in the U.S.

FOREIGN EXCHANGE

A majority of our revenues and expenses relating to hardware sales are denominated in U.S. dollars, and substantially all of our revenues and expenses relating to the service component of our network solutions business and to our software business are denominated in Renminbi. Although, in general, our exposure to foreign exchange risks should be limited, the value of our shares will be affected by the foreign exchange rate between the U.S. dollars and Renminbi because the value of our business is effectively denominated in Renminbi, while our shares are traded in U.S. dollars. Furthermore, a decline in the value of Renminbi could reduce the U.S. dollar equivalent of the value of the earnings from, and our investment in, our subsidiaries in China.

CONSOLIDATED RESULTS OF OPERATIONS

REVENUES. Gross revenues were \$94 million and \$151 million, respectively, in the three- and nine-month periods ended September 30, 2001, representing increases of 62% and 15%, respectively, over the comparable periods in fiscal 2000. Our high level of gross revenues in the third quarter of 2001 was attributable to large network construction projects, primarily with China Unicom, representing \$66.6 million of such revenues.

Revenues net of hardware costs were \$20.1 million and \$51.4 million, respectively, in the three- and nine-month periods ended September 30, 2001,

-20-

representing increases of 51% and 68%, respectively, over the comparable periods in fiscal 2000. Total software revenues were \$7.7 million and \$21.4 million, respectively, in the three- and nine-month periods ended September 30, 2001, representing increases of 47% and 83%, respectively, over the comparable periods in fiscal 2000. Of total software revenues for the three month period ended September 30, 2001, \$6.5 million was software license revenues, representing a 33% increase over the comparable period of 2000. For the nine months ended September 30, 2001, our gross revenues increased 15% year over year, while our revenues net of hardware costs increased 68%, demonstrating our decreased dependency on hardware resale. This decreased dependency has resulted in larger portions of higher-margin solutions and services in our network solutions contracts and better use of our working capital.

Edgar Filing: ASIAINFO HOLDINGS INC - Form 10-Q

COST OF REVENUES. Our cost of revenue, was \$78.5 million and \$111.2 million, respectively, in the three- and nine-month periods ended September 30, 2001, representing an increase of 63% over the three-month period ended September 30, 2000 and a decrease of less than one percent as compared to the nine-month period ended September 30, 2000. These costs of revenue consist primarily of hardware pass-through costs.

GROSS PROFIT. Gross profit was \$15.5 million and \$40.2 million, respectively, in the three- and nine-month periods ended September 30, 2001, representing increases of 59% and 96%, respectively, over the comparable periods in fiscal 2000.

OPERATING EXPENSES. Our total operating expenses were \$12 million and \$34.9 million, respectively, in the three- and nine-month periods ended September 30, 2001, representing increases of 5% and 21%, respectively, over the comparable periods in fiscal 2000. The low growth rate for total operating expenses in the third quarter of 2001 demonstrates our continuing ability to achieve high operating efficiency.

Sales and marketing expenses were \$6.3 million and \$17.8 million, respectively, in the three- and nine-month periods ended September 30, 2001, representing increases of 11% and 34%, respectively, over the comparable periods in fiscal 2000. We expect our sales and marketing expenses in the fourth quarter of 2001 to be lower as compared to the third quarter.

Research and development expenses were \$1.9 million and \$5.5 million, respectively, in the three- and nine-month periods ended September 30, 2001, representing increases of 12% and 25%, respectively, over the comparable periods in fiscal 2000. The 25% increase in year to date research and development expenses demonstrates the investment focus of our resource allocations.

INCOME (LOSS) FROM OPERATIONS. For the three-month period ended September 30, 2001, we had an operating profit of \$3.5 million, compared to an operating loss of \$1.6 million for the third quarter of 2000. For the nine-month period ended September 30, 2001, we had an operating profit of \$5.2 million, compared to an operating loss of \$8.3 million for the nine-month period ended September 30, 2000. Our expanding profitability has been driven by increasing revenues net of hardware costs, increasing contributions from high-end solutions and software, and effective expense control, leading us to increase our full year earnings guidance as discussed below under "- Net Income."

OTHER INCOME (EXPENSE). Other income (expense), consisting primarily of net interest income, totaled \$1.4 million and \$5.3 million for the three- and nine-month periods ended September 30, 2001, as compared to other net income of \$2.0 million and \$4.4 million, respectively, for the corresponding periods in 2000. Interest income decreased to \$1.6 million for the three-month period ended

-21-

September 30, 2001 compared to \$2.3 million for the comparable period in 2000 as a result of lower interest rates and as a result of our having less cash in interest bearing investments.

EQUITY IN LOSS OF AFFILIATE. In the three- and nine-month periods ended September 30, 2001, equity in loss of affiliate of approximately \$320,000 and \$576,000 represented our share of the net loss of Intrinsic Technology (Holdings), Ltd., including goodwill amortization of \$280,000 and \$469,000. We acquired a 14.25% interest in Intrinsic Technology (Holdings), Ltd. on April 27, 2001.

NET INCOME. We recorded net income of \$3.5 million, or \$0.08 basic earnings per

Edgar Filing: ASIAINFO HOLDINGS INC - Form 10-Q

share, for the quarter ended September 30, 2001 and net income of \$7.5 million, or \$0.18 basic earnings per share for the nine-month period ended September 30, 2001. This is in comparison to net income of \$0.4 million in the quarter ended September 30, 2000 and a net loss of \$3.8 million for the nine-month period ended September 30, 2000. We have increased our 2001 full year earnings guidance to projected net income of \$11.3 to \$11.5 million, or \$0.26 to \$0.27 per basic share.

LIQUIDITY AND CAPITAL RESOURCES

Our capital requirements are primarily working capital requirements related to hardware sales and costs associated with the expansion of our business, such as research and development and sales and marketing expenses. We recognize hardware costs in full upon delivery of the hardware to our customers. In order to minimize our working capital requirements, we generally obtain from our hardware vendors payment terms that are timed to permit us to receive payment from our customers for the hardware before our payments to hardware vendors are due. However, in certain recent large projects, we obtained less favorable payment terms from our customers, thereby increasing our working capital requirements. See "Factors Affecting our Operating Results and our Common Stock - Our working capital requirements may increase significantly". We have historically financed our working capital and other financing requirements through careful management of our network solutions billing cycle, private placements of equity securities, our initial public offering in March of 2000 and, to a limited extent, bank loans.

At September 30, 2001, we had a cash position of \$152.8 million (of which \$22.4 million was in short term investments, \$25.8 million was in restricted cash and \$104.6 million was in cash and cash equivalents). Our cash position was \$10 million lower than at the end of the second quarter of 2001 due to a larger than normal amount of accounts receivable. Our accounts receivable balance at September 30, 2001 was \$81 million, consisting of \$30 million in billed receivables and \$51 million in unbilled receivables. Our billed receivables are based on revenue we have booked and billed. Our unbilled receivables are based on revenue we have booked through the percentage completion method, but for which we have not yet billed the customer. For example, we recognize revenues for hardware pass-through at the time the hardware is accepted by the customer, based on the cost of the underlying hardware. However, our contracts with our customers will often allow the customers to withhold 10-20% of the total contract payments until final project acceptance, which on average is eight to nine months after hardware delivery. As a result, revenues from hardware pass-through generally represent a significant portion of our unbilled receivables and can cause the aging of these receivables to be relatively long.

At the end of the third quarter, our billed receivables were 53 days sales outstanding. Our unbilled receivables were 91 days sales outstanding. The longer-than-normal level of days sales outstanding is primarily attributable to the two large networks construction projects we are currently undertaking for one customer. As of October 22, 2001, we had collected 44% of these billed

-22-

receivables. We expect days sales outstanding to decrease significantly by the end of the fourth quarter, as we anticipate that one of the two large networks construction projects will reach final acceptance during the quarter. We have recorded a bad debt provision of \$1.2 million during the nine-month period ended September 30, 2001.

Our inventory position at the end of the quarter was approximately \$1.2 million. Inventories were down significantly this quarter as we delivered all of the hardware for two large network construction projects.

Edgar Filing: ASIAINFO HOLDINGS INC - Form 10-Q

As of September 30, 2001, we had total short-term credit facilities totaling \$24.2 million, expiring by June, 2002, for working capital purposes, of which unused short-term credit facilities were \$11.7 million at that date. At September 30, 2001, borrowings under these facilities totaled \$4.2 million, and \$8.3 million had been used to issue a letter of credit. Additional borrowings of approximately \$12.5 million were secured by bank deposits of \$13.1 million. All the borrowings were in Renminbi, the currency of China. The loans carry interest of 5.58% per annum and are repayable within one year. Bank deposits pledged as security for these bank loans and short-term credit facilities totaled \$25.8 million as of September 30, 2001, and are presented as restricted cash in our consolidated balance sheets.

We ended the quarter with a strong cash position of \$152.8 million, of which \$22.4 million was in short term investments, \$25.8 million was in restricted cash for the purpose of securing local currency loans, and \$104.6 million of which was in cash and cash equivalents. Our short-term investments feature fixed income, liquidity and low risk. The cash equivalents include investments in cash management accounts to enhance our interest income.

We anticipate that the net proceeds of our initial public offering in March 2000, together with available funds and cash flows generated from operations, will be sufficient to meet our anticipated needs for working capital, capital expenditures and business expansion through 2002. We may need to raise additional funds in the future, however, in order to fund acquisitions, develop new or enhanced services or products, respond to competitive pressures to compete successfully for larger projects involving higher levels of hardware purchases, or if our business otherwise grows more rapidly than we currently predict. We plan to raise additional funds, if necessary, through new issuances of shares of our equity securities in one or more public offerings or private placements, or through credit facilities extended by lending institutions.

In the event that we decide to pay dividends to our shareholders, our ability to pay dividends will depend in part on our ability to receive dividends from our operating subsidiaries in China. Foreign exchange and other regulations in China may restrict our ability to distribute retained earnings from our operating subsidiaries in China or convert those payments from Renminbi into foreign currencies.

RECENT ACCOUNTING PRONOUNCEMENTS

In June 1998, the Financial Accounting Standards Boards issued SFAS No.133, "Accounting for Derivative Instruments and Hedging Activities". This statement requires companies to record all derivatives on the balance sheet as assets or liabilities measured at fair value. Gains and losses resulting from changes in fair market values of those derivative instruments would be accounted for depending on the use of the instrument and whether it qualifies for hedge accounting. We adopted SFAS No.133 on January 1, 2001 and it did not have a material effect on our financial condition, results of operations or cash flows.

-23-

In July 2001, the Financial Accounting Standards Board issued SFAS No.141, "Business Combinations". SFAS No.141 requires the purchase method of accounting for business combinations initiated after June 30, 2001 and eliminates the pooling-of-interests method. Adoption of SFAS No.141 did not have a significant impact on our financial statements.

In July 2001, the Financial Accounting Standards Board issued SFAS No.142, "Goodwill and Other Intangible Assets", which is effective January 1, 2002. SFAS No.142 requires, among other things, the discontinuance of goodwill

Edgar Filing: ASIAINFO HOLDINGS INC - Form 10-Q

amortization. In addition, the standard includes provisions for the reclassification of certain existing recognized intangibles as goodwill, reassessment of the useful lives of existing recognized intangibles, reclassification of certain intangibles out of previously reported goodwill and the identification of reporting units for purposes of assessing potential future impairments of goodwill. SFAS No.142 also requires us to complete a transitional goodwill impairment test six months from the date of adoption. We are currently assessing but have not yet determined the impact of SFAS No.142 on our financial position and results of operations.

In August 2001, the Financial Accounting Standards Board issued Statement of Financial Accounting Standards No. 143, "Accounting for Asset Retirement Obligation", that addresses the accounting for the recognition of obligations associated with the retirement of tangible long-lived assets. SFAS No. 143 is effective for financial statements issued for years beginning after June 15, 2002. In October 2001, the Financial Accounting Standards Board issued Statement of Financial Accounting Standards No. 144, "Accounting for the Impairment or Disposal of Long-Lived Assets", effective for fiscal years beginning after December 15, 2001. SFAS No. 144 addresses the financial accounting and reporting requirements for the impairment or disposal of long-lived assets and discontinued operations. SFAS No. 144 applies to all recorded long-lived assets that are held for use or that will be disposed of, but excludes goodwill and other intangible assets that are not amortized. Management is currently assessing the impact, if any, the adoption of these standards will have on our financial statements.

FACTORS AFFECTING OUR OPERATING RESULTS AND OUR COMMON STOCK

In addition to the other information in this report, the following factors should be considered in evaluating our business and our future prospects:

THE GROWTH OF OUR BUSINESS IS DEPENDENT ON GOVERNMENT BUDGETARY POLICY, PARTICULARLY THE ALLOCATION OF FUNDS TO SUSTAIN THE GROWTH OF THE TELECOMMUNICATIONS INDUSTRY AND THE INTERNET IN CHINA.

Virtually all of our large customers are directly or indirectly owned or controlled by the government of China. Accordingly, their business strategies, capital expenditure budgets and spending plans are largely decided in accordance with government policies, which, in turn, are determined on a centralized basis at the highest level by the State Planning Commission of the People's Republic of China. As a result, the growth of our business is heavily dependent on government policies for telecommunications and Internet infrastructure. Despite the high priority currently accorded by the government to the development of telecommunications industry and Internet infrastructure, and a high level of funding allocated by the government to these sectors, insufficient government allocation of funds to sustain the growth of the telecommunications and Internet industries in the future could reduce the demand for our products and services and have a material adverse effect on our ability to grow our business.

-24-

Furthermore, if demand for Internet and telecommunications service from Chinese enterprises and households is not as strong as projected, our customers' investment in Internet and telecommunications infrastructure is likely to decrease. Although China's Internet population has increased dramatically in recent years and is expected to continue to grow, the average annual household income level in China is low relative to other industrialized nations. Low income levels may dampen the overall commercial impact of the Internet's growth in China relative to other countries.

LAWS AND REGULATIONS APPLICABLE TO THE INTERNET IN CHINA REMAIN UNSETTLED AND

Edgar Filing: ASIAINFO HOLDINGS INC - Form 10-Q

COULD HAVE A MATERIAL ADVERSE EFFECT ON THE INTERNET'S GROWTH AND THEREBY HAVE A MATERIAL ADVERSE EFFECT ON OUR BUSINESS.

Growth of the Internet in China could be materially adversely affected by governmental regulation of the industry. Due to the increasing popularity and use of the Internet and other online services, new regulations have been and may continue to be adopted with respect to the Internet or other online services. The Ministry of Information Industry has recently promulgated the Administrative Measures on Internet Information Services and related implementing regulations. Among other things, the Administrative Measures on Internet Information Services:

-- require Internet content providers to obtain approval from the Ministry of Information Industry before they can list securities overseas or obtain foreign investment;

-- require Internet content providers to obtain licenses from various ministries, depending on the nature of the content they provide; and

-- require Internet content providers to police their content in order to prevent restricted material from appearing on their websites.

Because we are engaged in Internet infrastructure development and Internet-related software development and licensing, we do not expect these new regulations to have a direct impact on us. However, we cannot guarantee that the adoption of these regulations or other regulations will not slow the growth of the Internet or other online services in China. In particular, the prohibitions against a broad but vague range of information on the Internet (such as information that is damaging to national security, national interest, and social order), the relevant monitoring, record-keeping, reporting and other administrative burdens imposed on Internet access and content providers, and the severe penalties for violations of these regulations could have a chilling effect on Internet content providers and Internet users and could lead to increased compliance costs for Internet content providers. Any slow-down in the growth of the Internet in China could in turn lead to reduced Internet traffic, and a decrease in the demand for our network solutions and Internet-related software products.

OUR CUSTOMER BASE IS CONCENTRATED AND THE LOSS OF ONE OR MORE OF OUR CUSTOMERS COULD CAUSE OUR BUSINESS TO SUFFER SIGNIFICANTLY.

We have derived, and believe that we will continue to derive, a significant portion of our revenues from a limited number of large customers, such as China Telecom, China Unicom, China Mobile and China Netcom. China Telecom accounted for almost all of our revenues in 1997 and 1998. In 1999, China Telecom, together with China Unicom, accounted for almost all of our revenues. At September 30, 2001, China Telecom and China Unicom accounted for approximately 77% of our backlog net of hardware costs. The loss, cancellation or deferral of any large contract by any of our large customers would have a material adverse effect on our revenues, and consequently our profits.

-25-

THE LONG AND VARIABLE SALES CYCLES FOR OUR PRODUCTS AND SERVICES CAN CAUSE OUR REVENUES AND OPERATING RESULTS TO VARY SIGNIFICANTLY FROM PERIOD TO PERIOD AND MAY ADVERSELY AFFECT THE TRADING PRICE OF OUR COMMON STOCK.

Our revenues and operating results will vary significantly from quarter to quarter due to a number of factors, many of which are outside of our control and any of which may cause our stock price to fluctuate. A customer's decision to purchase our services and products involves a significant commitment of its

Edgar Filing: ASIAINFO HOLDINGS INC - Form 10-Q

resources and an extended evaluation. As a result, our sales cycle tends to be lengthy. We spend considerable time and expense educating and providing information to prospective customers about features and applications of our services and products. Because our major customers operate large and complex networks, they usually expand their networks in large increments on a sporadic basis. The combination of these factors can cause our revenues and results of operations to vary significantly and unexpectedly. Other factors that may affect us include the following:

- fluctuation in demand for our products and services as a result of the budgetary cycles of our large customers, particularly state-owned enterprises;
- the reduction, delay, interruption or termination of one or more infrastructure projects; and
- our ability to introduce, develop and deliver new software products that meet customer requirements in a timely manner.

A large part of the contract amount of a network solutions project usually relates to hardware procurement. Since we recognize most of the revenues relating to hardware plus a portion of contract services revenues at the time of hardware delivery, the timing of hardware delivery can cause our quarterly revenues to fluctuate significantly.

Due to the foregoing factors, we believe that quarter-to-quarter comparisons of our operating results are not a good indication of our future performance and should not be relied upon. It is likely that our operating results in some periods may be below the expectations of public market analysts and investors. In this event, the price of our common stock will probably decline, perhaps significantly more in percentage terms than the decline in operating results.

OUR WORKING CAPITAL REQUIREMENTS MAY INCREASE SIGNIFICANTLY.

We typically purchase hardware for our customers as part of our turn-key total solutions services. We generally require our customers to pay 90% of the invoice value of the hardware upon delivery. We typically place orders for hardware against back-to-back orders from customers and seek favorable payment terms from hardware vendors. This policy has historically minimized our working capital requirements. However, for certain large and strategically important projects, we have agreed to payment of less than 90% of the invoice value of the hardware upon delivery in order to maintain competitiveness. For example, in certain large Internet backbone projects we secured last year, we agreed to allow our customers to withhold 15 to 20% of the total contract payments until final acceptance of the projects. The outstanding nature of these payments and the large size of the backbone projects have caused our number of days sales outstanding to increase. Wider adoption of less favorable payment terms or delays in hardware deliveries will require us to increase our working capital needs significantly.

-26-

Our working capital requirements may also increase significantly in order to fund more rapid expansion and acquisitions, to develop new or enhanced services or products, to respond to competitive pressure to compete successfully for larger projects involving higher levels of hardware purchases or otherwise if our business grows more rapidly than we currently predict. An increase in our working capital needs may require that we raise additional funding sooner than we presently expect.

WE HAVE SUSTAINED LOSSES IN PRIOR YEARS AND MAY INCUR SLOWER EARNINGS GROWTH, EARNINGS DECLINES OR NET LOSSES IN THE FUTURE.

Edgar Filing: ASIAINFO HOLDINGS INC - Form 10-Q

Although we have recently achieved operating profitability and had net income in 1996 and 1998, we have sustained net losses in 1997, 1999 and 2000. There are no assurances that we can sustain profitability or avoid net losses in the future. We continue to expect that certain of our operating expenses will increase as our business grows. The level of these expenses will be largely based on anticipated organizational growth and revenue trends and a high percentage will be fixed. As a result, any delays in expanding sales volume and generating revenue could result in substantial operating losses. Any such developments could cause the market price of our common stock to decline.

MANAGEMENT'S ABILITY TO IMPLEMENT ADEQUATE CONTROL SYSTEMS WILL BE CRITICAL TO THE SUCCESSFUL MANAGEMENT OF OUR FUTURE GROWTH.

In recent years, we have been expanding our operations rapidly, both in size and scope. Our growth places a significant strain on our management systems and resources. Our ability to market our products successfully and implement our business plan in a rapidly evolving market requires an effective planning and management process. We will need to continue to improve our financial, managerial and operational controls and reporting systems, and to expand, train and manage our work force. We may not be able to implement adequate control systems in an efficient and timely manner.

WE FACE A COMPETITIVE LABOR MARKET IN CHINA FOR SKILLED PERSONNEL AND THEREFORE ARE HIGHLY DEPENDENT ON THE SKILLS AND SERVICES OF OUR EXISTING KEY SKILLED PERSONNEL AND OUR ABILITY TO HIRE ADDITIONAL SKILLED EMPLOYEES.

Competition for highly skilled software design, engineering and sales and marketing personnel is intense in China. Failure to attract, assimilate or retain qualified personnel to fulfill our current or future needs could impair our growth. Competition for skilled personnel comes primarily from a wide range of foreign companies active in China, many of which have substantially greater resources than we have. Limitations on our ability to hire and train a sufficient number of personnel at all levels would limit our ability to undertake projects in the future and could cause us to lose market share.

WE ARE HIGHLY DEPENDENT ON OUR EXECUTIVE OFFICERS.

Each of our executive officers has responsibility for an important segment of our operations. Although we believe that we have significant depth at all levels of management, the loss of any of executive officers' services could be detrimental to our operations. To ensure continuity of management, we have entered into employment agreements with all of our executive officers. We do not have, and do not plan to obtain, "key man" life insurance on any of our employees.

-27-

SINCE OUR BUSINESS HAS BEEN EVOLVING, OUR HISTORICAL FINANCIAL INFORMATION MAY NOT BE AN APPROPRIATE BASIS ON WHICH TO EVALUATE US OR OUR PROSPECTS.

We began generating significant network solutions revenue in 1996 and significant software license revenues in 1998. We expect our business to continue to evolve as the Internet and telecommunications markets in China change and expand. In particular, we are currently investing substantial personnel and financial resources in expanding our software business and making strategic investments in complementary businesses in China. As a result, our historical financial data may not provide a meaningful basis upon which investors may evaluate us and our prospects. You should consider the risks and difficulties encountered by companies like ours in a new and rapidly evolving market. Our ability to sell products and our level of success depend, among

Edgar Filing: ASIAINFO HOLDINGS INC - Form 10-Q

other things, on the level of demand for Internet-related, professional IT services and software products in China.

WE EXTEND WARRANTIES TO OUR NETWORK SOLUTIONS CUSTOMERS THAT EXPOSE US TO POTENTIAL LIABILITIES.

We customarily provide our customers with one to three year warranties, under which we agree to maintain the installed systems at no additional cost to our customers. The maintenance services cover both hardware and our proprietary and third party software products. Although we seek to arrange back-to-back warranties with hardware and software vendors, we have the primary responsibility to maintain the installed hardware and software. Our contracts do not have disclaimers or limitations on liability for special, consequential and incidental damages, nor do we cap the amounts recoverable for damages. In addition, we do not currently maintain any insurance policy with respect to our exposure to warranty claims. Although to date we have not incurred any liability for special, consequential or incidental damages, failure of our installed projects to operate properly could give rise to substantial claims against us that in turn could materially and adversely affect us.

WE SELL OUR LARGE SYSTEMS INTEGRATION PROJECTS ON A FIXED PRICE, FIXED-TIME BASIS WHICH EXPOSES US TO RISKS ASSOCIATED WITH COST OVERRUNS AND DELAYS.

We sell substantially all of our systems integration projects on a fixed-price, fixed-time basis. Failure to complete a fixed-price, fixed-time project within budget and the required time frame would expose us to cost overruns and penalties that could have a material adverse effect on our business, operating results and financial condition. In contracts with our customers, we typically agree to pay late completion fines of up to 5% of the total contract value. In large scale Internet infrastructure projects, there are many factors beyond our control which could cause delays or cost overruns. In this event, we would be exposed to cost overruns and liable for late completion fines. A part of our network solutions business is installing Internet network hardware. If we are unable to obtain access to such equipment in a timely manner or on acceptable commercial terms, our business, particularly our relationships with our customers, may be materially and adversely affected.

WE MAY BECOME LESS COMPETITIVE IF WE ARE UNABLE TO DEVELOP OR ACQUIRE NEW PRODUCTS OR ENHANCEMENTS TO OUR SOFTWARE PRODUCTS THAT ARE MARKETABLE ON A TIMELY AND COST-EFFECTIVE BASIS.

We continually develop new services and proprietary software products. Unexpected technical, operational, distribution or other problems could delay or prevent the introduction of one or more of these products or services or any products or services that we may plan to introduce in the future. Moreover, we

-28-

cannot be sure that any of these products and services will achieve widespread market acceptance or generate incremental revenues.

OUR PROPRIETARY RIGHTS MAY BE INADEQUATELY PROTECTED AND THERE IS A RISK OF POOR LAW ENFORCEMENT.

Our success and ability to compete depend substantially upon our intellectual property rights, which we protect through a combination of copyright, trade secret law and trademark law. We have filed trademark applications with the United States Trademark Office, the Trademark Bureau of the State Administration of Industry and Commerce in China and the Trade Marks Registry in Hong Kong. We have also registered copyrights with the State Copyright Bureau in China with respect to Internet-related software products, although we have not applied for

Edgar Filing: ASIAINFO HOLDINGS INC - Form 10-Q

copyright protection elsewhere (including the United States). Despite these precautions, the legal regime protecting intellectual property rights in China is weak. Because the Chinese legal system in general, and the intellectual property regime in particular, are relatively weak, it is often difficult to enforce intellectual property rights in China. In addition, there are other countries where effective copyright, trademark and trade secret protection may be unavailable or limited, and the global nature of the Internet makes it virtually impossible to control the ultimate destination of our products.

We do not own any patents and have not filed any patent applications, as we do not believe that the benefits of patent protection outweigh the costs of filing and updating patents for our software products. We enter into confidentiality agreements with our employees and consultants, and control access to, and distribution of, our documentation and other licensed information. Despite these precautions, it may be possible for a third party to copy or otherwise obtain and use our licensed services or technology without authorization, or to develop similar technology independently. Policing unauthorized use of our licensed technology is difficult and there can be no assurance that the steps we take will prevent misappropriation or infringement of our proprietary technology. In addition, litigation may be necessary in the future in order to enforce our intellectual property rights, to protect our trade secrets or to determine the validity and scope of the proprietary rights of others, which could result in substantial costs and diversion of our resources.

WE ARE EXPOSED TO CERTAIN BUSINESS AND LITIGATION RISKS WITH RESPECT TO TECHNOLOGY RIGHTS HELD BY THIRD PARTIES.

We currently license technology from third parties and intend to do so increasingly in the future. As we introduce services that require new technology, we will probably need to license additional third party technology. We cannot assure you that these technology licenses will be available to us on commercially reasonable terms, if at all. Our inability to obtain any of these licenses could delay or compromise our ability to introduce new services. In addition, we may or may allegedly breach the technology rights of others and incur legal expenses and damages, which, in the aggregate, could be substantial.

INVESTORS MAY NOT BE ABLE TO ENFORCE JUDGMENTS BY UNITED STATES COURTS AGAINST US.

We are incorporated in the State of Delaware. However, a majority of our directors, executive officers and shareholders live outside the United States, principally in Beijing, China and Hong Kong. Also, all or most of our assets are located outside the United States. As a result, you may not be able to:

-- effect service of process upon us or these persons within the United States, or

-29-

-- enforce against us or these persons judgments obtained in United States courts, including judgments relating to the federal securities laws of the United States.

WE DO NOT INTEND TO PAY AND MAY BE RESTRICTED FROM PAYING DIVIDENDS ON OUR COMMON STOCK.

We have never declared or paid any dividends on our capital stock and we do not intend to declare any dividends. We currently intend to retain future earnings to fund growth. Furthermore, if we decide to pay dividends, foreign exchange and other regulations in China may restrict our ability to distribute retained earnings from China or convert these payments from Renminbi into foreign

Edgar Filing: ASIAINFO HOLDINGS INC - Form 10-Q

currencies. In addition, loan agreements and contractual arrangements we enter into in the future may also restrict our ability to pay dividends.

THE FACT THAT OUR BUSINESS IS CONDUCTED IN BOTH U.S. DOLLARS AND RENMINBI MAY SUBJECT US TO CURRENCY EXCHANGE RATE RISK DUE TO FLUCTUATIONS IN THE EXCHANGE RATE BETWEEN THESE TWO CURRENCIES.

Substantially all of our revenues, expenses and liabilities are denominated in either U.S. dollars or Renminbi. As a result, we are subject to the effects of exchange rate fluctuations between these currencies. Most contracts we enter into with our customers provide for price adjustments reflecting foreign exchange fluctuations; however, we cannot guarantee that future contracts will contain such provisions. As a result of the unitary exchange rate system introduced in China on January 1, 1994, the official bank exchange rate for conversion of Renminbi to U.S. dollars experienced a devaluation of approximately 50%. We report our financial results in U.S. dollars, therefore, any future devaluation of the Renminbi against the U.S. dollar may have an adverse effect upon our reported net income.

Substantially all our revenues and expenses relating to hardware sales are denominated in U.S. dollars, and substantially all our revenues and expenses relating to the service component of our network solutions business and software business are denominated in Renminbi. Although, in general, our exposure to foreign exchange risks should be limited, the value in our shares may be affected by the foreign exchange rate between the U.S. dollar and the Renminbi because the value of our business is effectively denominated in Renminbi, while our shares are traded in U.S. dollars. Furthermore, a decline in the value of the Renminbi could reduce the U.S. dollar value of earnings from, and our investment in, our subsidiaries in China.

THE MARKETS IN WHICH WE SELL OUR SERVICES AND PRODUCTS ARE COMPETITIVE AND WE MAY NOT BE ABLE TO COMPETE EFFECTIVELY.

The network solutions market for Internet infrastructure in China is new and rapidly changing. Our competitors in the market mainly include domestic systems integrators such as Ztec and Autian. Although we are a leading player in this market, there are many large multinational companies with substantial, existing information technology operations in other markets in China, that have significantly greater financial, technological, marketing and human resources. Should they decide to enter the network solutions market for Internet infrastructure, this could hurt our profitability and erode our market share.

In the customer management and billing software market, we compete with both international and local software providers. In the online billing segment, we compete primarily with Portal Software, MIND and Ztec, and in the wireless billing segment, we compete with more than ten local competitors. The messaging software sector is highly competitive. Our principal competitors in this sector

-30-

are Open Wave (formerly Software.com) and Netease. Currently, due in part to a stringent approval system for providers of wireless billing software in China and competitive pricing offered by domestic companies, some multinational information technology companies have been deterred from entering this market. In view of the gradual deregulation of the Chinese telecommunications industry and China's pending entry into the WTO, we anticipate the entrance of new competitors into the customer management and billing software market.

Our competitors, some of whom have greater financial, technical and human resources than us, may be able to respond more quickly to new and emerging technologies and changes in customer requirements or devote greater resources to

Edgar Filing: ASIAINFO HOLDINGS INC - Form 10-Q

the development, promotion and sale of new products or services. It is possible that competition in the form of new competitors or alliances, joint ventures or consolidation among existing competitors may decrease our market share. Increased competition could result in lower personnel utilization rates, billing rate reductions, fewer customer engagements, reduced gross margins and loss of market share, any one of which could materially and adversely affect our profits and overall financial condition.

POLITICAL AND ECONOMIC POLICIES OF THE CHINESE GOVERNMENT COULD AFFECT OUR INDUSTRY IN GENERAL AND OUR COMPETITIVE POSITION IN PARTICULAR.

Since the establishment of the People's Republic of China in 1949, the Communist Party has been the governing political party in China. The highest bodies of leadership are the Politburo of the Communist Party, the Central Committee and the National People's Congress. The State Council, which is the highest institution of government administration, reports to the National People's Congress and has under its supervision various commissions, agencies and ministries, including The Ministry of Information Industry, the telecommunications regulatory body of the Chinese government. Since the late 1970s, the Chinese government has been reforming the Chinese economic system. Although we believe that economic reform and the macroeconomic measures adopted by the Chinese government have had and will continue to have a positive effect on the economic development in China, there can be no assurance that the economic reform strategy will not from time to time be modified or revised. Such modifications or revisions, if any, could have a material adverse effect on the overall economic growth of China and investment in the Internet and the telecommunications industry in China. Such developments could reduce, perhaps significantly, the demand for our products and services. There is no guarantee that the Chinese government will not impose other economic or regulatory controls that would have a material adverse effect on our business. Furthermore, changes in political, economic and social conditions in China, adjustments in policies of the Chinese government or changes in laws and regulations could adversely affect our industry in general and our competitive position in particular.

UNCERTAINTIES WITH RESPECT TO THE CHINESE LEGAL SYSTEM COULD ADVERSELY AFFECT US.

Our principal operating subsidiary, AsiaInfo Technologies, is a wholly foreign owned enterprise for Chinese legal purposes, which means that it is incorporated in China and wholly-owned by foreign investors. AsiaInfo Technologies, along

-31-

with our indirect majority-owned subsidiary, Marsec Systems Inc., are subject to laws and regulations applicable to foreign investment in China in general and laws applicable to wholly foreign owned enterprises in particular. Legislation and regulations over the past 20 years have significantly enhanced the protections afforded to various forms of foreign investment in China. However, since the Chinese legal system is still evolving, the interpretations of many laws, regulations and rules are not always uniform and enforcement of these laws, regulations and rules involve uncertainties, which may limit remedies available to us .

HIGH TECHNOLOGY AND EMERGING MARKET SHARES HAVE HISTORICALLY EXPERIENCED EXTREME VOLATILITY AND MAY SUBJECT YOU TO LOSSES.

The trading price of our shares may be subject to significant market volatility due to:

-- investor perceptions of us and investments relating to China and Asia;

Edgar Filing: ASIAINFO HOLDINGS INC - Form 10-Q

- developments in the Internet and telecommunications industries;
- variations in our operating results from period to period due to project timing; and
- announcements of new products or services by us or by our competitors.

In addition, the high technology sector of the stock market frequently experiences extreme price and volume fluctuations, which have particularly affected the market prices of many Internet and computer software companies and which have often been unrelated to the operating performance of these companies.

FUTURE SALES OF SHARES BY OUR COMPANY OR EXISTING SHAREHOLDERS COULD CAUSE THE MARKET PRICE OF OUR COMMON STOCK TO FALL.

If our stockholders sell substantial amounts of our common stock in the public market, including shares issued upon the exercise of outstanding options, the market price of our common stock could fall. Such sales also might make it more difficult for us to sell equity or equity-related securities in the future at a time and price that we deem appropriate.

A SMALL NUMBER OF SHAREHOLDERS CONTROLS US.

Our five largest shareholders, Warburg-Pincus Ventures, ChinaVest Group, and their affiliates, as well as Edward Tian, one of our directors, James Ding, our President and Chief Executive Officer, and Louis Lau, our Chairman, in the aggregate, control over 60% of our voting stock. As a result, these shareholders are able to control all matters requiring shareholder approval, including election of directors and approval of significant corporate transactions, such as a sale of our assets and the terms of future equity financings. The combined voting power of our large shareholders could have the effect of delaying or preventing a change in control.

WE ARE SUBJECT TO ANTI-TAKEOVER PROVISIONS THAT COULD PREVENT A CHANGE OF CONTROL OF ASIAINFO AND PREVENT OUR SHAREHOLDERS FROM REALIZING A PREMIUM ON THEIR COMMON STOCK.

Our board of directors has the authority to issue up to 10,000,000 shares of our preferred stock. Without any further vote or action on the part of our stockholders, the board of directors has the authority to determine the price,

-32-

rights, preferences, privileges and restrictions of the preferred stock. This preferred stock, if it is ever issued, may have preference over and harm the rights of the holders of common stock. Although the issuance of this preferred stock will provide us with flexibility in connection with possible acquisitions and other corporate purposes, this issuance may make it more difficult for a third party to acquire a majority of our outstanding voting stock.

We currently have authorized the size of our board of directors to be not less than three nor more than nine directors. The terms of the office of the eight-member board of directors have been divided into three classes: Class I, whose term will expire at the annual meeting of the stockholders to be held in 2003; Class II, whose term will expire at the annual meeting of stockholders to be held in 2004; and Class III, whose term will expire at the annual meeting of stockholders to be held in 2002. This classification of the board of directors may have the effect of delaying or preventing changes in control or management.

We are subject to the provisions of Section 203 of the Delaware General

Edgar Filing: ASIAINFO HOLDINGS INC - Form 10-Q

Corporation Law. In general, the statute prohibits a publicly-held Delaware corporation from engaging in a "business combination" with an "interested stockholder" for a period of three years after the date when the person became an interested stockholder unless, subject to exceptions, the business combination or the transaction in which the person became an interested stockholder is approved in a prescribed manner. Generally, a "business combination" includes a merger, asset or stock sale, or other transaction resulting in a financial benefit to the stockholder.

ITEM 3. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

We are exposed to interest-rate risk primarily associated with our underlying liabilities. To date, we have not entered into any types of derivatives to hedge against interest-rate changes, nor do we speculate in foreign currency. However, we do maintain a significant portion of our cash deposits in U.S. dollars to avoid currency risk related to Renminbi. A portion of these U.S. dollar deposits are used to collateralize Renminbi-denominated loans from Chinese banks.

Because substantially all of our revenues and expenses relating to hardware sales are denominated in U.S. dollars, and substantially all of our revenues and expenses relating to the service component of our network solutions business and software business are denominated in Renminbi, we do not have significant exposure to either the U.S. dollar or Renminbi. Thus, we do not believe that it is necessary to enter into derivatives contracts to hedge our exposures to either currency.

PART II. OTHER INFORMATION

ITEM 2. CHANGES IN SECURITIES AND USE OF PROCEEDS

On March 2, 2000, our Registration Statement on Form S-1 covering the offering of 5,000,000 shares of our common stock (No.333-93199) was declared effective. The underwriters in the offering exercised an over-allotment option to purchase an additional 750,000 shares of our common stock. The total price to the public for the shares offered and sold was \$138,000,000. The net proceeds of the offering (after deducting expenses) was approximately \$126,608,884. As of September 30, 2001, \$6.3 million of the net proceeds had been used for purchases and installation of machinery and equipment, \$9.0 million had been invested in our subsidiaries, Marsec Holdings, Inc., Guangdong Wanying Information Technology Co., Ltd., and Intrinsic Technology (Holdings) Ltd., and \$17.2

-33-

million had been applied to research and development and sales and marketing expenses. The remainder of the net proceeds were held in temporary investments.

The net proceeds will be used for general corporate purposes, including working capital, and expenses such as research and development and sales and marketing. A portion of the net proceeds may also be used to acquire or invest in complementary businesses or products. None of the net proceeds of the offering have been paid directly or indirectly to our directors, officers or their associates, to persons owning ten percent or more of our common stock, or to our affiliates.

ITEM 5. OTHER INFORMATION

Our board of directors resolved on May 31, 2001 to increase the number of directors on our board from seven to eight and to appoint Steve Chang, President and Chief Executive Officer of Trend Micro, Inc., as a new director. Steve Chang accepted the appointment and became a member of our board of directors on October 16, 2001. As with our other Class I directors, Steve Chang's current

Edgar Filing: ASIAINFO HOLDINGS INC - Form 10-Q

term as a director will expire at our annual meeting of stockholders to be held in 2003, at which time we anticipate that he will stand for election to a new term.

ITEM 6. EXHIBITS AND REPORTS ON FORM 8-K

(a) Exhibits

The following exhibits are filed as a part of this Report.

Exhibit Number	Description Exhibits
-----	-----
3.1	Certificate of Incorporation of AsiaInfo Holdings, Inc., dated June 8, 1998/*/
3.2	Certificate of Amendment to Certificate of Incorporation of AsiaInfo Holdings, Inc., dated August 27, 1999/*/
