Commentary

Portfolio Manager Commentary
Fund Performance

The fund's NAV declined 0.9% during March to end at \$14.41. Based on NAV, the fund's total return, which includes the monthly dividend of 8.375 cents per share, was (0.32)%. Sharply falling prices on the fund's modest holdings in municipal tobacco settlement bonds accounted for the decline in NAV. Despite its decline in March, the NAV of the fund remains above its level at fund inception.

The fund's market price declined 3.4% over the month to end at \$14.06. Based on the market price, the fund's total return for March was (2.87)%. The market price declined from a modest premium to NAV of 0.1% at the end of February to a discount to NAV of 2.43% at the end of March accounts for this larger loss.

Amid heightened interest rate volatility, the discount of price to NAV widened and the market price traded in a wide range. The discount reached its widest level of 3.8% on March 26 and the market price reached its lowest closing level of \$13.76 on the same day. The discount narrowed and the market price rose

Edgar Filing: FEDERATED PREMIER MUNICIPAL INCOME FUND - Form 8-K

by month-end. Trading volume of the fund's common shares on the NYSE averaged about 9,900 shares/day.

The annualized current yield of the fund relative to its month-end closing market price was 7.15%, which equates to 11.63% on a taxable equivalent basis.

Municipal Market

Uncertainty regarding the likely length and economic effects of the war in Iraq resulted in high volatility in fixed income and equity markets. Economic data generally suggesting a weakening U.S. economy seemed to have little effect on fixed income market direction, as market participants focused largely on the latest war news and the reactions in U.S. stock markets. As an indicator of the level of volatility, the ten-year AAA municipal bond yield ranged from 3.39% to 3.85% during the month, and the high and low observations occurred within seven trading days. On net, the AAA ten-year yield ended the month up seven basis points at 3.63%, and yields across the municipal yield curve rose two to nine basis points.

(All AAA muni yields from Municipal Market Data.)

The ratio of municipal bond to Treasury bond yields remained near historically high levels across the yield curve. The primary reasons include high demand for Treasury debt in a time of heightened uncertainty, heavy municipal bond issuance and the potential for additional tax reform.

The slope of the municipal yield curve remained steep, with the difference between one-year and 30-year AAA yields ranging from 350 to 380 basis points. The steep curve continues to allow for the highly profitable use of leverage to enhance the dividend to common shareholders.

The fund paid an average of 1.04% in preferred share dividends during March, while the capital contributed by preferred shareholders was invested in the fund's portfolio of long-term municipal bonds, which had an average yield to effective maturity of 5.29% for the month.

The total return on the Lehman Brothers Aggregate Municipal Bond Index was 0.06% for the month, with general obligation bonds outperforming revenue bonds. A small sector of the revenue bond universe, tobacco settlement bonds, faced sharply falling prices in late March due to adverse litigation developments weighing heavily on the credit quality of Philip Morris USA. This company is currently responsible for the payment of nearly 50% of revenues that secure such bonds.

Investment Strategy

The fund's portfolio management team continued to evaluate opportunities to increase fund holdings of bonds rated BBB or lower, consistent with the fund's income objective. The fund purchased such securities in the hospital and industrial revenue sectors during the month. Lastly, amid heightened uncertainty surrounding the financial status of Philip Morris USA and the related deterioration in the credit quality of municipal tobacco settlement bonds, the portfolio managers reduced the fund's holdings of such municipal securities.

*Taxable Equivalent Market Yields - In calculating these yields, the market yield is divided by (1 minus the applicable tax rate). The maximum federal tax rate (38.6%) is used when calculating the taxable equivalent market yield. Federal Tax Rates are based on the 2003 rates as stated in the Economic Growth and Tax Relief Reconciliation Act of 2001.

**Duration is a measure of a security's price sensitivity to changes in interest rates. Securities with longer durations are more sensitive to changes in interest rates than securities of shorter durations.

The Fund is a closed-end fund. Unlike open-end funds, closed-end funds are not continually offered. There is a one-time public offering, and once issued, shares of closed-end funds are bought and sold in the open market. Consequently, shares of closed-end funds may trade at, above or below their net asset values ("NAV"). If a closed-end fund's shares trade at a price below their NAV, they are said to be trading at a "discount." Conversely, if a closed-end fund's

Edgar Filing: FEDERATED PREMIER MUNICIPAL INCOME FUND - Form 8-K

shares trade at a price above their NAV, they are said to be trading at a "premium." Shares of closed-end funds frequently trade at a discount.

The Fund offers Common Shares and Preferred Shares. The Pricing, Yield, Dividends, Fund History and Total Return information provided herein relates to Common Shares only. Unlike Preferred Shares, Common Shares are not rated.

The Fund's issuance of Preferred Shares creates leverage risks for holders of Common Shares. Two major types of risks created by leverage include: (1) the likelihood of greater volatility of NAV and market price of Common Shares, because changes in the value of the Fund's portfolio securities are borne entirely by holders of Common Shares; and (2) the possibility either that income available for Common Share dividends will fall if the Preferred Shares dividend rate rises, or that income available for Common Shares dividends will fluctuate because the Preferred Shares dividend rate varies.

The Fund invests in high-yield, lower-rated securities that generally entail greater market, credit and liquidity risks than investment-grade securities.

Please refer to the Fund's prospectus for more information on the risks associated with an investment in the Fund.

Income may be subject to state and local taxes.

Past performance is no guarantee of future results. Total return, price, yields, and NAV will fluctuate. Total returns of less than 1 year are cumulative.

Portfolio composition is subject to change.

Credit ratings pertain only to the securities in the Fund's portfolio and do not protect the Fund against market risk.

For additional information, including definitions of related terms and indexes, see the Financial Glossary and Benchmark Index Glossary.

The Fund's Common Shares are only available for purchase and sale on the New York Stock Exchange at the current market price. Common Shares may trade at a discount to NAV.

Consult your investment professional for further information.
