PART I

Item 1. Business

GENERAL

White Mountains Insurance Group, Ltd. (the Company or the Registrant) is an exempted Bermuda limited liability company whose principal businesses are conducted through its property and casualty insurance and reinsurance subsidiaries. Within this report, the term White Mountains is used to refer to one or more entities within the consolidated organization, as the context requires. The Company's headquarters is located at 14 Wesley Street, Hamilton, Bermuda HM 11, its principal executive office is located at 80 South Main Street, Hanover, New Hampshire 03755-2053 and its registered office is located at Clarendon House, 2 Church Street, Hamilton, Bermuda HM 11. White Mountains' reportable segments are OneBeacon, White Mountains Re, Esurance and Other Operations.

The OneBeacon segment consists of OneBeacon Insurance Group, Ltd. (OneBeacon Ltd.), an exempted Bermuda limited liability company that owns a family of U.S. based property and casualty insurance companies (collectively OneBeacon), most of which operate in a multi-company pool. OneBeacon is a specialty property and casualty insurance writer that offers a wide range of insurance products through independent agencies, regional and national brokers, wholesalers and managing general agencies. During the fourth quarter of 2006, White Mountains sold 27.6 million, or 27.6%, of OneBeacon Ltd.'s common shares in an initial public offering (the OneBeacon Offering). As of December 31, 2010 White Mountains owned 76.0% of OneBeacon Ltd.'s outstanding common shares.

The White Mountains Re segment consists of White Mountains Re Ltd., an exempted Bermuda limited liability company, and its subsidiaries (collectively, White Mountains Re). White Mountains Re provides insurance and reinsurance products for property, accident & health, aviation and space, trade credit, marine, casualty, agriculture and certain other exposures on a worldwide basis through its subsidiaries, Sirius International Insurance Corporation (WMRe Sirius) and White Mountains Reinsurance Company of America (WMRe America, formerly known as Folksamerica Reinsurance Company). White Mountains Re also specializes in the acquisition and management of run-off insurance and reinsurance companies both in the United States and internationally through its White Mountains Re Solutions division. White Mountains Re also includes Scandinavian Reinsurance Company, Ltd. (Scandinavian Re), which is in run-off, and Central National Insurance Company of Omaha (Central National), which was acquired during the first quarter of 2010 and is in run-off.

The Esurance segment consists of Esurance Holdings, Inc. and its subsidiaries and Answer Financial Inc. and its subsidiaries (AFI) (collectively, Esurance). Esurance writes personal auto insurance directly to customers in 30 states through its website and over the phone and also sells other lines of personal insurance for unaffiliated insurance companies. Esurance also writes personal auto policies through select online agents and provides other insurance products through partnerships with industry leading online providers. Esurance also earns commissions and fees by referring to unaffiliated insurance companies those shoppers that it cannot underwrite because of pricing or underwriting eligibility. AFI, which White Mountains acquired during 2008, is one of the largest independent personal insurance agencies in the United States. AFI sells insurance online and through call centers for both Esurance and unaffiliated companies utilizing a comparison quoting platform.

The Other Operations segment consists of the Company and its intermediate holding companies, its wholly-owned investment management subsidiary, White Mountains Advisors LLC (WM Advisors), White Mountains' investment in common shares and warrants to purchase common

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

shares of Symetra Financial Corporation (Symetra), the consolidated results of the Tuckerman Capital, LP fund (Tuckerman Fund I), White Mountains variable annuity reinsurance business, White Mountains Life Reinsurance (Bermuda) Ltd. (WM Life Re), which is in run-off, as well as various other entities not included in other segments. The Other Operations segment also included White Mountains investment in Lightyear Delos Acquisition Corporation (Delos) prior to its disposition in December 2010, its weather risk management business prior to its disposition in August 2009 and the International American Group, Inc. (the International American Group) prior to its disposition in October 2008.

Table of Contents

White Mountains Operating Principles

White Mountains strives to operate within the spirit of four operating principles. These are:

Underwriting Comes First. An insurance enterprise must respect the fundamentals of insurance. There must be a realistic expectation of underwriting profit on all business written, and demonstrated fulfillment of that expectation over time, with focused attention to the loss ratio and to all the professional insurance disciplines of pricing, underwriting and claims management.

Maintain a Disciplined Balance Sheet. The first concern here is that insurance liabilities must always be fully recognized. Loss reserves and expense reserves must be solid before any other aspect of the business can be solid. Pricing, marketing and underwriting all depend on informed judgment of ultimate loss costs and that can be managed effectively only with a disciplined balance sheet.

Invest for Total Return. Historical insurance accounting has tended to hide unrealized gains and losses in the investment portfolio and over-reward reported investment income (interest and dividends). Regardless of the accounting, White Mountains must invest for the best growth in after-tax value over time. In addition to investing our bond portfolios for total after-tax return, that will also mean prudent investment in a balanced portfolio consistent with leverage and insurance risk considerations.

Think Like Owners. Thinking like owners has a value all its own. There are stakeholders in a business enterprise and doing good work requires more than this quarter's profit. But thinking like an owner embraces all that without losing the touchstone of a capitalist enterprise.

ONEBEACON

OneBeacon, whose U.S. corporate headquarters are in Minnetonka, Minnesota, is a specialty property and casualty insurance writer that offers a wide range of insurance products through independent agencies, regional and national brokers, wholesalers and managing general agencies. As a specialty company, OneBeacon is guided by a focus on certain customer groups and/or geographic territories where it believes its targeted products and expertise deliver a competitive advantage. OneBeacon believes specialization will result in superior returns as compared to a more generalist underwriting approach and that its knowledge regarding its targeted industries, classes and risk characteristics provides it with a competitive edge for its terms and conditions on individual accounts. OneBeacon's products cover professional liability, marine, collector cars and boats, property and inland marine, excess property, accident and health, technology, public entities, energy, entertainment, sports and leisure, tuition reimbursement and excess and surplus lines.

At December 31, 2010 and 2009, OneBeacon had \$6.1 billion and \$7.5 billion of total assets and \$1.2 billion and \$1.4 billion of common shareholders' equity, respectively. At December 31, 2010 and 2009, White Mountains reported \$295 million and \$351 million of noncontrolling interest related to its ownership in OneBeacon. OneBeacon wrote \$1.2 billion and \$1.9 billion in net written premiums in 2010 and 2009, respectively.

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

The following table presents the financial strength ratings assigned to OneBeacon's principal insurance operating subsidiaries:

	A.M. Best(1)	Standard & Poor's(2)	Moody's(3)	Fitch(4)
Rating	A (Excellent)	A- (Strong)	A2 (Good)	A (Strong)
Outlook	Stable	Stable	Negative	Stable

-
- (1) A is the third highest of fifteen financial strength ratings assigned by A.M. Best Company (A.M. Best).
 - (2) A- is the seventh highest of twenty-one financial strength ratings assigned by Standard & Poor's.
 - (3) A2 is the sixth highest of twenty-one financial strength ratings assigned by Moody's Investor Service (Moody's).
 - (4) A is the sixth highest of twenty-one financial strength ratings assigned by Fitch Ratings (Fitch).

Property and Casualty Insurance Overview

Generally, property and casualty insurance companies write insurance policies in exchange for premiums paid by their customers (the insured). An insurance policy is a contract between the insurance company and the insured where the insurance company agrees to pay for losses suffered by the insured that are covered under the contract. Such contracts often are subject to subsequent legal interpretation by courts, legislative action and arbitration. Property insurance generally covers the financial consequences of accidental losses to the insured's property, such as personal property, or a business building, inventory and equipment. Casualty insurance (often referred to as liability insurance) generally covers the financial consequences of a legal liability of an individual or an organization resulting from negligent acts and omissions causing bodily injury and/or property damage to a third party. Claims on property coverage generally are reported and settled in a relatively short period of time, whereas those on casualty coverage can take years, even decades, to settle.

Table of Contents

OneBeacon derives substantially all of its revenues from earned premiums, investment income and net realized and unrealized investment gains and losses on investment securities. Earned premiums represent premiums received from insureds, which are recognized as revenue over the period of time that insurance coverage is provided (i.e., ratably over the life of the policy). A significant period of time normally elapses between the receipt of insurance premiums and the payment of insurance claims. During this time, OneBeacon invests the premiums, earns investment income and generates net realized and unrealized gains and losses on investment activities.

Insurance companies incur a significant amount of their total expenses from policyholder losses, which are commonly referred to as claims. In settling policyholder losses, various loss adjustment expenses (LAE) are incurred such as insurance adjusters' fees and litigation expenses. In addition, insurance companies incur policy acquisition expenses, such as commissions paid to agents and premium taxes, and other expenses related to the underwriting process, including their employees' compensation and benefits. The key measure of relative underwriting performance for an insurance company is the combined ratio. An insurance company's combined ratio under accounting principles generally accepted in the United States (GAAP) is calculated by adding the ratio of incurred loss and LAE to earned premiums (the loss and LAE ratio) and the ratio of policy acquisition and other underwriting expenses to earned premiums (the expense ratio). A combined ratio under 100% indicates that an insurance company is generating an underwriting profit. However, when considering investment income and investment gains or losses, insurance companies operating at a combined ratio of greater than 100% can be profitable.

Lines of Business

Historically, OneBeacon offered a range of specialty, commercial and personal products. However, as a result of recent transactions, OneBeacon is now focused exclusively on specialty business. In addition, the transactions freed up significant capital, increased OneBeacon's financial flexibility and substantially reduced its catastrophe exposure. On December 3, 2009, OneBeacon sold the renewal rights to its non-specialty commercial lines business to the Hanover Insurance Group Ltd. (The Hanover), beginning with January 1, 2010 effective dates (the Commercial Lines Transaction) and on July 1, 2010, OneBeacon completed the sale of its traditional personal lines business to Tower Group Inc. (Tower) (the Personal Lines Transaction).

OneBeacon's net written premiums for the years ended December 31, 2010, 2009 and 2008 consisted of on-going specialty insurance operations and other insurance operations, which are primarily businesses that are now in run-off or have been sold as a result of the Commercial Lines Transaction and the Personal Lines Transaction.

Net written premiums by line of business Millions	Year Ended December 31,		
	2010	2009	2008
Specialty insurance operations	\$ 988.0	\$ 946.2	\$ 836.9
Other insurance operations	248.3	960.5	1,126.3
Total	\$ 1,236.3	\$ 1,906.7	\$ 1,963.2

Specialty Insurance Operations

OneBeacon's specialty insurance operations include a collection of niche businesses that focus on solving the unique needs of particular customer or industry groups on a national scale. OneBeacon provides distinct products and offers tailored coverages and services, managed by seasoned teams of market specialists. Some of these businesses maintain stand-alone operations and distribution channels targeting their specific customer groups. The majority of these businesses are focused on smaller property-casualty insurance segments where particular expertise and

relationships with similarly focused distribution partners have resulted historically in strong operating results. These businesses maintain their competitive advantage through a deep knowledge of their respective customers and markets. OneBeacon has added, and expects to continue to add, new specialty businesses both organically and through acquisition, guided by its focus on profitable growth while prudently managing underwriting risk. OneBeacon's specialty insurance businesses are described below.

Collector Cars and Boats

Through its exclusive partnership with the Hagerty Insurance Agency (Hagerty), OneBeacon offers tailored coverages for collectible vehicles and wooden boats, automotive museums and restoration shops. Notable features include agreed value for the insured vehicle or boat, flexible usage, and overseas shipping/foreign touring coverage—all supported by in-house claims expertise. OneBeacon's relationship with Hagerty has an initial term of five years and will be up for renewal in the second quarter of 2013.

Table of Contents

A.W.G. Dewar (Dewar)

Dewar has been a leading provider of tuition reimbursement insurance since 1930. Dewar's product protects both schools and parents from the financial consequences of a student's withdrawal or dismissal from school. OneBeacon has an ownership interest of approximately 80% in the Dewar agency.

OneBeacon Entertainment (OBE)

OBE provides specialized commercial insurance products, including professional liability coverages, for the entertainment, sports and leisure industries. OBE encompasses Entertainment Brokers International Insurance Services (EBI), which OneBeacon acquired in July 2008 and continues to operate as a managing agency offering additional specialized coverages through a network of independent agents and brokers.

International Marine Underwriters (IMU)

IMU, which traces its roots to the early 1900s, offers a full range of ocean marine insurance products including, but not limited to, commercial hull and marine liabilities at both the primary and excess levels; ocean and air cargo with coverage extensions such as inland transit, warehousing, and processing; yachts; and several marine package products with comprehensive property, auto, and liability coverage.

OneBeacon Technology Insurance (OBTI)

OBTI offers worldwide insurance solutions for the technology sector. OBTI's InfoTech coverages feature professional liability, data privacy, products liability and property and business income targeting the software, hardware manufacturing, telecommunications service industries and solar energy. OBTI's MedTech offerings include products and general liability as well as human clinical trials, property and business income well suited for manufacturers of diagnostic and therapeutic medical devices, veterinary products and biologic devices. OBTI's team has an expert staff in both risk control and technology claims handling.

Specialty Accident and Health (OB A&H)

OB A&H offers accident and health insurance principally through four segments: commercial (midsized organizations to Fortune 1000 companies); transportation (trucking and courier); programs (associations and other affinity groups); and services (bundled and unbundled). OB A&H's products include accidental death and dismemberment, occupational accident, non-truckers liability, vehicle physical damage and other accident and health coverages. OB A&H also manages OneBeacon Services, which provides employers and affinity groups with access to a suite of services including a discounted prescription drug program, identity theft resolution services and travel assistance services.

OneBeacon Government Risks (OBGR)

OBGR provides protection for mid-sized municipalities and counties, special districts including water and sanitation, non-rail transit authorities and other publicly funded agencies. Coverages include property, casualty and professional liability comprised of law enforcement, public officials and employment practices liability offered on a fully insured, deductible, self-insured retention or assumed reinsurance basis.

OneBeacon Energy Group (OBEG)

OBEG focuses on mid-market upstream and midstream conventional energy business, alternative and renewable energy producers, alternative fuel producers and related service and manufacturing enterprises. OBEG offers a full array of property, inland marine and casualty insurance, including property damage, boiler and machinery breakdown, general liability, auto liability and umbrella liability. OBEG continues to develop and expand product offerings to serve its customers' needs. OBEG does not offer offshore energy products.

OneBeacon Professional Insurance (OBPI)

OBPI specializes in professional liability solutions for targeted industries including hospitals, long-term care facilities, medical facilities, physician groups, media organizations, lawyers, real estate professionals, design professionals, financial services and technology providers. Additionally, OBPI provides employment practices liability insurance, management liability and tailored products for complex organizations including health care provider excess insurance and HMO reinsurance. General liability, property and workers' compensation coverages are also available for financial institutions. OBPI's policies are primarily issued on a claims-made basis, which covers losses reported during the time period when a liability policy is in effect, regardless of when the event causing the claim actually occurred.

Table of Contents

OneBeacon Property and Inland Marine (PIM)

PIM provides monoline property and inland marine products. The business property focus is on real estate, health care, education, aviation and municipality sectors for property coverages, while inland marine targets the construction, transportation and fine arts segments. PIM delivers creative and tailored solutions that fit its customers unique needs through broad coverage forms, specialized risk control and claims-handling capabilities.

OneBeacon Specialty Property (OBSP)

OBSP provides excess property and inland marine coverages that augment primary policies or self-insured retentions. Target classes of business include apartments and condominiums, commercial real estate, small-to-medium manufacturing, retail/wholesale, education and public entities. OBSP solutions are provided primarily through surplus lines wholesalers.

OneBeacon Excess and Surplus (OBES)

OneBeacon s newest business, OBES was established in July 2010 both to support its current businesses and to write selectively in the excess and surplus market. OBES includes OneBeacon Environmental, which offers specialized environmental insurance products designed to address a broad range of exposures faced by businesses. Capabilities include commercial general liability, contractors environmental liability, professional liability, environmental premises liability, products pollution liability and follow-form excess.

Other Insurance Operations

OneBeacon s other insurance operations includes AutoOne, which offers products and services to the assigned risk market. AutoOne is a market leader in assigned risk business in New York. Assigned risk plans provide automobile insurance for individuals unable to secure coverage in the voluntary market. Insurance carriers are obliged to accept future assignments from state assigned risk pools as a condition of maintaining a license to write automobile business in the state. However, carriers may satisfy their assigned risk obligation by buying out of their assignments through an agreement with an approved Assigned Risk Servicing Company or limit their assignments through the purchase and transfer of credits (for example, take-out, territorial and youthful driver credits). AutoOne offers services known as Limited Assignment Distribution (LAD) and Commercial Limited Assignment Distribution (CLAD), and credit programs to insurance carriers. AutoOne provides 28 LAD and CLAD programs in 21 states and the District of Columbia where assigned risk obligations may be assumed by a servicing carrier under a negotiated fee arrangement.

OneBeacon s other insurance operations also includes run-off business, which consists primarily of non-specialty commercial lines business included in the Commercial Lines Transaction, as well as national accounts, certain specialty programs and regional agency business transferred to Liberty Mutual Insurance Group effective November 1, 2001. Additionally, OneBeacon s other insurance operations includes the traditional personal lines business sold as part of the Personal Lines Transaction and certain purchase accounting adjustments relating to White Mountains acquisition of OneBeacon.

The Commercial Lines Transaction included small commercial accounts and the non-specialty portion of the middle-market business, beginning with January 1, 2010 effective dates. OneBeacon continues to manage claims from its non-specialty commercial lines policies written prior to the Commercial Lines Transaction. Through June 30, 2010, OneBeacon also managed claims from business fronted by OneBeacon and reinsured to The Hanover. OneBeacon continues to provide claims system access and first notice of loss service to The Hanover. The Hanover reimburses OneBeacon for its expenses incurred to provide the claims administration services.

The Personal Lines Transaction included the execution of reinsurance agreements with certain subsidiaries of OneBeacon pursuant to which OneBeacon cedes, on a 100% quota share basis, traditional personal lines business not directly written by companies included in the sale and assumes, on a 100% quota share basis, non-traditional personal lines business written directly by York Insurance Company of Maine, one of the insurance companies sold. The non-traditional personal lines business assumed back from Tower is reported within specialty insurance operations. OneBeacon also entered into a Transition Services Agreement (TSA), pursuant to which it provides certain services to Tower during the three-year term of the TSA. Tower reimburses OneBeacon for its expenses incurred to provide these services. Reimbursement for these services is netted against the expense incurred.

Table of Contents**Geographic Concentration**

Substantially all of OneBeacon's net written premiums are derived from business produced in the United States. Business from specialty insurance operations was produced in the following states:

Specialty insurance operations Net written premiums by state	Year Ended December 31,		
	2010	2009	2008
California	13%	13%	12%
New York	9	9	9
Texas	7	7	7
Florida	6	6	6
Massachusetts	5	6	5
New Jersey	4	4	4
Other(1)	56	55	57
Total	100%	100%	100%

(1) No individual state is greater than 4% of specialty net written premiums for the years ended December 31, 2010, 2009 and 2008.

Marketing and Distribution

OneBeacon offers its products through a network of select independent agents, regional and national brokers and wholesalers. Overall, OneBeacon has approximately 2,900 distribution relationships across the country. In recent years, OneBeacon has expanded its distribution channels to include select managing general agencies (MGAs), either through acquisitions or exclusive relationships. These MGAs focus on a particular customer group with tailored products and services, and related expertise.

OneBeacon protects the integrity of its franchise value by selectively appointing distribution partners that demonstrate business and industry knowledge and geographic profiles that align with its target markets and specialized capabilities. OneBeacon believes in the added value provided by independent distribution partners as they conduct more complete assessments of their clients' needs, which result in more appropriate coverages and prudent risk management. OneBeacon also believes that agents and brokers will continue to be a significant force in overall industry premium production.

Underwriting and Pricing

OneBeacon believes there must be a realistic expectation of attaining an underwriting profit on all the business it writes, as well as a demonstrated fulfillment of that expectation over time. Consistent with OneBeacon's underwriting comes first operating principle, adequate pricing is a critical component for achieving an underwriting profit. OneBeacon underwrites its book with a disciplined approach towards

pricing its insurance products and is willing to forgo a business opportunity if it believes it is not priced appropriately to the exposure.

OneBeacon actively monitors pricing activity and measures usage of tiers, credits, debits and limits. In addition, OneBeacon regularly updates base rates to achieve targeted returns on capital and attempts to shift writings away from lines and classes where pricing is inadequate. To the extent changes in premium rates, policy forms or other matters are subject to regulatory approval (see **REGULATION United States** and **Risk Factors Regulation may restrict our ability to operate**), OneBeacon proactively monitors its pending regulatory filings to facilitate, to the extent possible, their prompt processing and approval. Lastly, OneBeacon expends considerable effort to measure and verify exposures and insured values.

Competition

Property and casualty insurance is highly competitive. OneBeacon's businesses each compete against a different subset of companies. In general terms, OneBeacon competes to varying degrees in one or more of its businesses with most of the large multi-line insurance companies, such as ACE Limited, Chartis Insurance, Chubb Group of Insurance Companies, CNA Insurance, Liberty Mutual Insurance Group, Travelers Insurance Group Holdings Inc. and Zurich Financial Services Ltd. OneBeacon also competes with most of the specialty companies, such as Allied World Assurance Company, HCC Insurance Holdings, Inc., Ironshore Inc., Markel Corporation, RLI Corp. and W.R. Berkley Corporation. Lastly, OneBeacon competes in certain of its businesses with various local and regional insurance companies.

The more significant competitive factors for most insurance products OneBeacon offers are price, product terms and conditions, agency and broker relationships and claims service. OneBeacon's underwriting principles and dedication to independent distribution partners are unlikely to make it the low-cost provider in most markets. While it is often difficult for insurance companies to differentiate their products, OneBeacon believes that by providing superior specialty products to satisfy well-defined market needs and relying on agents and brokers who value its targeted expertise, superior claims service, and disciplined underwriting, they establish their competitive advantage. The continued existence of carriers operating with lower cost structures places ongoing pressure on OneBeacon's pricing and terms and conditions, which may impact its ability to compete.

Table of Contents

Claims Management

Effective claims management is a critical factor in achieving satisfactory underwriting results. OneBeacon maintains an experienced staff of appraisers, medical specialists, managers and field adjusters strategically located throughout its operating territories. OneBeacon also maintains a special investigative unit designed to detect insurance fraud and abuse and support efforts by regulatory bodies and trade associations to curtail fraud.

Following the Commercial Lines and Personal Lines Transactions, claims operations are now organized into ongoing claims and run-off claims, with specific claims resources supporting the respective operations. This approach allows us to better identify and manage claims handling costs. In addition, a shared claims service unit manages costs related to all claims staff and vendors. OneBeacon has adopted a total claims cost management approach that gives equal importance to controlling claims handling expenses, legal expenses and claims payments, enabling it to lower the sum of the three. This approach requires the utilization of a considerable number of conventional metrics to monitor the effectiveness of various programs implemented to lower total loss costs. OneBeacon utilizes the metrics to guard against implementation of expense containment programs that will cost more than it expects to save.

OneBeacon's claims department utilizes a claims workstation to record reserves, payments and adjuster activity and, with support from expert tools, assists each claim handler in identifying recovery potential, estimating property damage, evaluating claims and identifying fraud. OneBeacon's commitment and performance in fighting insurance fraud has reduced claim costs and aided law enforcement investigations.

OneBeacon has a reinsurance contract with National Indemnity Company (NICO) to help protect against potential asbestos and environmental (A&E) claims (the NICO Cover). See **Reinsurance Protection and Catastrophe Management**. NICO has retained a third-party administrator (TPA), Resolute New England (Resolute) to manage the claims processing for A&E claims reinsured under the NICO Cover. OneBeacon's claims department personnel are consulted by NICO and Resolute on major claims. As with all TPAs, claims department personnel continually monitor Resolute to ensure its controls, processes and settlements are appropriate.

Catastrophe Risk Management and Reinsurance Protection

In the normal course of its business, OneBeacon purchases reinsurance from high-quality, highly rated, third-party reinsurers in order to minimize loss from large losses or catastrophic events.

The timing and size of catastrophe losses are unpredictable and the level of losses experienced in any year could be material to OneBeacon's operating results and financial position. Examples of catastrophes include losses caused by earthquakes, wildfires, hurricanes and other types of storms and terrorist acts. The extent of losses caused by catastrophes is a function of the amount and type of insured exposure in the area affected by the event as well as the severity of the event. OneBeacon uses models (primarily AIR Version 12) to estimate the probability of the occurrence of a catastrophic event as well as potential losses under various scenarios. OneBeacon uses this model output in conjunction with other data to manage its exposure to catastrophe losses through individual risk selection and by limiting its concentration of insurance written in catastrophe-prone areas such as coastal regions. In addition, OneBeacon imposes wind deductibles on existing coastal windstorm exposures.

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

OneBeacon seeks to further reduce its potential loss from catastrophe exposures through the purchase of catastrophe reinsurance. Effective July 1, 2010, OneBeacon renewed its property catastrophe reinsurance program through June 30, 2011. The program provides coverage for OneBeacon's property business, as well as certain acts of terrorism. Under the program, the first \$80 million of losses resulting from any single catastrophe are retained and the next \$195 million of losses resulting from the catastrophe are reinsured, although OneBeacon retains a co-participation (20% of losses in excess of \$80 million up to \$100 million and 8% of losses in excess of \$100 million up to \$140 million). Any loss above \$275 million would be retained in full. In the event of a catastrophe, OneBeacon's property catastrophe reinsurance program is reinstated for the remainder of the original contract term by paying a reinstatement premium that is based on the percentage of coverage reinstated and the original property catastrophe coverage premium. OneBeacon anticipates that the \$275 million limit is sufficient to cover its largest single event natural catastrophe exposure with a 0.4%-0.5% probability of occurrence (1-in-250-year event to 1-in-200-year event). This \$275 million limit was reduced from the \$850 million limit that OneBeacon's previous catastrophe reinsurance program provided. This reduction was in response to the greatly lower Northeast windstorm exposures as a result of the Commercial Lines Transaction and the Personal Lines Transaction.

Table of Contents

OneBeacon's property catastrophe reinsurance program does not cover property losses resulting from nuclear events or biological, chemical or radiological terrorist attacks or losses resulting from acts of terrorism as defined under the Terrorism Risk Insurance Act of 2002 (the "Terrorism Act" or "TRIA"), as amended, committed by an individual or individuals acting on behalf of any foreign person or foreign interest. See **Terrorism**.

OneBeacon also purchases property-per-risk reinsurance coverage to reduce large loss volatility. The property-per-risk reinsurance program reinsures losses in excess of \$10 million up to \$100 million. Individual risk facultative reinsurance may be purchased above \$100 million where OneBeacon deems it appropriate. The property-per-risk treaty also provides one limit of reinsurance protection for losses in excess of \$10 million up to \$100 million on an individual risk basis for terrorism losses. However, nuclear, biological, chemical and radiological terrorist attacks are not covered.

OneBeacon also maintains a casualty reinsurance program that provides protection for individual policies involving workers compensation, general liability, automobile liability, professional liability or umbrella liability in excess of \$5 million up to \$21 million (\$20 million for healthcare professional liability). Liability clash losses involving more than one insured are covered by a dedicated treaty up to \$40 million in excess of a retention of \$10 million.

In addition, OneBeacon has reinsurance contracts with two reinsurance companies rated AA+ (Very Strong, the second highest of twenty-one financial strength ratings) by Standard & Poor's and A++ (Superior, the highest of fifteen financial strength ratings) by A.M. Best. One contract is the reinsurance cover with NICO, which entitles OneBeacon to recover up to \$2.5 billion in ultimate loss and LAE incurred related primarily to claims arising from business written by OneBeacon prior to 1992 for asbestos claims and prior to 1987 for environmental claims and certain other exposures. As of December 31, 2010, OneBeacon has ceded estimated incurred losses of approximately \$2.2 billion to the NICO Cover. Net losses paid totaled \$1.4 billion as of December 31, 2010, with \$182 million paid in 2010. The other contract is a reinsurance cover with General Reinsurance Corporation ("GRC") for up to \$570 million of additional losses on all claims arising from accident years 2000 and prior (the "GRC Cover"). Through December 31, 2010, OneBeacon had ceded estimated incurred losses of \$550 million to the GRC Cover. Pursuant to the GRC Cover, OneBeacon is not entitled to recover losses to the full contract limit if such losses are reimbursed by GRC more quickly than anticipated at the time the contract was signed. OneBeacon intends to only seek reimbursement from GRC for claims which result in payment patterns similar to those supporting OneBeacon's recoverables recorded pursuant to the GRC Cover. The economic cost of not submitting certain other eligible claims to GRC is primarily the investment spread between the rate credited by GRC and the rate achieved by OneBeacon on its own investments. This cost, if any, is expected to be nominal. During the year ended December 31, 2010, OneBeacon collected \$61 million under the GRC Cover.

Reinsurance contracts do not relieve OneBeacon of its obligation to its policyholders. Therefore, collectibility of balances due from reinsurers is critical to OneBeacon's financial strength. See **Note 4 Third-Party Reinsurance** of the accompanying consolidated financial statements.

Terrorism

Since the terrorist attacks of September 11, 2001, OneBeacon has sought to mitigate the risk associated with any future terrorist attacks by limiting the aggregate insured value of policies in geographic areas with exposure to losses from terrorist attacks. This is accomplished by either limiting the total insured values exposed, or, where applicable, through the use of terrorism exclusions.

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

In December 2007, the U.S. government extended the Terrorism Act for seven more years until December 31, 2014. The Terrorism Act, originally enacted in 2002, established a federal backstop for commercial property and casualty losses, including workers compensation, resulting from acts of terrorism by or on behalf of any foreign person or foreign interest. As extended, the law now also covers domestic acts of terrorism. The law limits the industry's aggregate liability by requiring the federal government to share 85% of certified losses once a company meets a specific retention or deductible as determined by its prior year's direct written premiums and limits the aggregate liability to be paid by the government and industry without further action by Congress at \$100 billion. In exchange for this backstop, primary insurers are required to make coverage available to commercial insureds for losses from acts of terrorism as specified in the Terrorism Act. The following types of coverage are excluded from the program: commercial automobile, burglary and theft, surety, farmowners multi-peril and all professional liability coverage except directors and officers coverage.

Table of Contents

OneBeacon estimates its individual retention level for commercial policies subject to the Terrorism Act to be approximately \$135 million in 2011. OneBeacon's retention is based on the previous year's (2010) direct earned premium for subject lines of business and has dropped approximately 25% over 2010 due to the Commercial Lines Transaction. The federal government will pay 85% of covered terrorism losses that exceed OneBeacon's or the industry's retention levels in 2011, up to a total of \$100 billion.

OneBeacon's current property and casualty catastrophe reinsurance programs provide coverage for both certified and non-certified events as defined under the Terrorism Act, provided such losses are not the result of a nuclear, biological, chemical or radiological terrorist attack, or for certified acts committed by an individual or individuals acting on behalf of any foreign person or foreign interest. See **Reinsurance Protection and Catastrophe Management** above.

OneBeacon closely monitors and manages its concentration of risk by geographic area. OneBeacon's guideline is to control its exposures so that its total maximum expected loss from a likely terrorism event within any half-mile radius in a metropolitan area or around a target risk will not exceed \$200 million, or \$300 million in all other areas. Reports monitoring OneBeacon's terrorism exposures are generated quarterly, and the exposure of potential new business located in areas of existing concentration or that individually present significant exposure is evaluated during the underwriting process. As a result, OneBeacon believes that it has taken appropriate actions to limit its exposure to losses from terrorist attacks and will continue to monitor its terrorism exposure in the future. Nonetheless, risks insured by us, including those covered by the Terrorism Act, remain exposed to terrorist attacks and the possibility remains that losses resulting from future terrorist attacks could prove to be material.

Loss and Loss Adjustment Expense Reserves

OneBeacon establishes loss and LAE reserves that are estimates of amounts needed to pay claims and related expenses in the future for insured events that have already occurred. The process of estimating reserves involves a considerable degree of judgment by management and, as of any given date, is inherently uncertain. See **CRITICAL ACCOUNTING ESTIMATES** in **Management's Discussion and Analysis of Financial Condition and Results of Operations** for a full discussion regarding OneBeacon's loss reserving process.

The following information presents (1) OneBeacon's reserve development over the preceding nine and a half years and (2) a reconciliation of reserves in accordance with accounting principles and practices prescribed or permitted by insurance authorities (Statutory basis) to such reserves determined in accordance with GAAP, each as prescribed by Securities Act Industry Guide No. 6.

Section I of the table shows the estimated liability that was recorded at the end of each of the indicated years for all current and prior accident year unpaid loss and LAE. The liability represents the estimated amount of loss and LAE for claims that were unpaid at the balance sheet date, including incurred but not reported (IBNR) reserves. In accordance with GAAP, the liability for unpaid loss and LAE is recorded in the balance sheet gross of the effects of reinsurance with an estimate of reinsurance recoverables arising from reinsurance contracts reported separately as an asset. The net balance represents the estimated amount of unpaid loss and LAE outstanding as of the balance sheet date, reduced by estimates of amounts recoverable under reinsurance contracts.

Section II shows the cumulative amount of net loss and LAE paid relating to recorded liabilities as of the end of each succeeding year. Section III shows the re-estimated amount of the previously recorded net liability as of the end of each succeeding year. Estimates of the liability

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

for unpaid loss and LAE are increased or decreased as payments are made and more information regarding individual claims and trends, such as overall frequency (the average number of claims submitted per policy during a given period of time) and severity (the average value of claims submitted per policy during a given period of time) patterns, becomes known. Section IV shows the cumulative net (deficiency)/redundancy representing the aggregate change in the liability from original balance sheet dates and the re-estimated liability through December 31, 2010. Section V shows the re-estimated gross liability and re-estimated reinsurance recoverables through December 31, 2010. Section VI shows the cumulative gross (deficiency)/redundancy representing the aggregate change in the liability from original balance sheet dates and the re-estimated liability through December 31, 2010.

(1) OneBeacon became a wholly-owned subsidiary of White Mountains on June 1, 2001.

(2) Amounts reported in the table do not include adjustments for purchase accounting related to the acquisition of OneBeacon.

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

The following table reconciles loss and LAE reserves determined on a statutory basis to loss and LAE reserves determined in accordance with GAAP at December 31, as follows:

Millions	Year Ended December 31,		
	2010	2009	2008
Statutory reserves	\$ 2,681.7	\$ 3,285.4	\$ 3,465.0
Reinsurance recoverable on unpaid losses and LAE(1)	813.1	866.9	1,073.9
Other(2)	(22.8)	(27.0)	(34.4)
Reserves before purchase accounting	3,472.0	4,125.3	4,504.5
Purchase accounting	(176.5)	(190.5)	(210.5)
GAAP reserves	\$ 3,295.5	\$ 3,934.8	\$ 4,294.0

(1) Represents adjustments made to add back reinsurance recoverables included with the presentation of reserves under statutory accounting.

(2) Represents long-term workers compensation loss and LAE reserve discount recorded in excess of statutorily defined discount.

Table of Contents

OneBeacon's Intermediate Holding Companies/Financing Activities

OneBeacon's intermediate holding companies include OneBeacon U.S. Enterprises Holdings, Inc. (OBEH), formerly Fund American Enterprises Holdings, Inc., and OneBeacon U.S. Holdings, Inc. (OBH), formerly Fund American Companies, Inc., both U.S.-domiciled companies, as well as various intermediate holding companies domiciled in the United States, Bermuda, Gibraltar and Luxembourg.

In May 2003, OBH issued \$700 million face value of senior unsecured notes through a public offering, at an issue price of 99.7% (the OBH Senior Notes). The OBH Senior Notes bear an annual interest rate of 5.875%, payable semi-annually in arrears on May 15 and November 15, until maturity in May 2013. Since their issuance through December 31, 2010, OneBeacon has repurchased \$280 million face value of the OBH Senior Notes. As a result, at December 31, 2010, \$420 million face value of the OBH Senior Notes remained outstanding.

White Mountains provides an irrevocable and unconditional guarantee as to the payment of principal and interest on the OBH Senior Notes. In consideration of this guarantee OneBeacon pays White Mountains a guarantee fee equal to 25 basis points per annum on the outstanding principal amount of the OBH Senior Notes. If White Mountains' voting interest in OneBeacon Ltd.'s common shares ceases to represent more than 50% of all of OneBeacon Ltd.'s voting securities, OneBeacon Ltd. will seek to redeem, exchange or otherwise modify the OBH Senior Notes in order to fully and permanently eliminate White Mountains' obligations under the guarantee. In the event that White Mountains' guarantee is not eliminated, the guarantee fee will increase over time up to a maximum of 450 basis points.

WHITE MOUNTAINS RE

White Mountains Re provides insurance and reinsurance products for property, accident & health, aviation and space, trade credit, marine, casualty, agriculture, and certain other exposures on a worldwide basis through its subsidiaries, WMRe Sirius and WMRe America. WMRe Sirius, which is the largest reinsurance company domiciled in Scandinavia based on gross written premiums, provides multi-line property and casualty insurance and reinsurance products primarily in Europe, the Americas and Asia. WMRe America provides multi-line property and casualty reinsurance products primarily in the United States, Canada, Latin America, and the Caribbean. In September 2009, White Mountains Re reorganized its reinsurance operations by transferring the in-force business of White Mountains Re Bermuda Ltd. (WMRe Bermuda) to WMRe Sirius, which established a branch office in Bermuda to maintain the group's presence in the Bermuda market.

White Mountains Re has offices in Belgium, Bermuda, Connecticut, Copenhagen, Hamburg, London, Miami, New York, Singapore, Stockholm, Toronto and Zurich. At December 31, 2010 and 2009, the White Mountains Re segment had \$5.5 billion and \$5.6 billion of total assets and \$1.3 billion and \$1.4 billion of common shareholder's equity, respectively. The White Mountains Re segment wrote \$866 million and \$807 million in net written premiums in 2010 and 2009, respectively.

The following table presents the financial strength ratings assigned to WMRe Sirius and WMRe America:

	A.M. Best(1)	Standard & Poor's(2)	Moody's(3)	Fitch(4)
WMRe Sirius				

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

WMRe America				
Rating	A- (Excellent)	A- (Strong)	A3 (Good)	A- (Strong)
Outlook	Stable	Stable	Stable	Stable

-
- (1) A is the third highest and A- is the fourth highest of fifteen financial strength ratings assigned by A.M. Best.
 - (2) A- is the seventh highest of twenty-one financial strength ratings assigned by Standard & Poor's.
 - (3) A3 is the seventh highest of twenty-one financial strength ratings assigned by Moody's.
 - (4) A- is the seventh highest of twenty-one financial strength ratings assigned by Fitch.

White Mountains Re acquired Sirius Insurance Holdings Sweden AB (SIHAB) and its subsidiaries from ABB Ltd. on April 16, 2004 for SEK 3.27 billion (approximately \$428 million). The principal companies acquired were WMRe Sirius, Sirius America Insurance Company (Sirius America, which was subsequently sold in 2006), and Scandinavian Re, a reinsurance company that has been in run-off since 2002.

White Mountains Re also specializes in the acquisition and management of run-off insurance and reinsurance companies both in the United States and internationally through its White Mountains Re Solutions division (See **White Mountains Re Solutions**).

Table of Contents

Reinsurance Overview

Reinsurance is an arrangement in which a reinsurance company (the reinsurer) agrees to indemnify an insurance company (the ceding company) for all or a portion of the insurance risks underwritten by the ceding company under one or more insurance policies. Reinsurance can benefit a ceding company in a number of ways, including reducing exposure on individual risks, providing catastrophe protections from large or multiple losses, and assisting in maintaining acceptable capital levels as well as financial and operating leverage ratios. Reinsurance can also provide a ceding company with additional underwriting capacity by permitting it to accept larger risks and underwrite a greater number of risks without a corresponding increase in its capital. Reinsurers may also purchase reinsurance, known as retrocessional reinsurance, to cover their own risks assumed from ceding companies. Reinsurance companies often enter into retrocessional agreements for many of the same reasons that ceding companies enter into reinsurance agreements.

Reinsurance is generally written on a treaty or facultative basis. Treaty reinsurance is an agreement whereby the reinsurer assumes a specified portion or category of risk under all qualifying policies issued by the ceding company during the term of the agreement, usually one year. When underwriting treaty reinsurance, the reinsurer does not evaluate each individual risk and generally accepts the original underwriting decisions made by the ceding company. Treaty reinsurance is typically written on either a proportional or excess of loss basis. A proportional reinsurance treaty is an arrangement whereby a reinsurer assumes a predetermined proportional share of the premiums and losses generated on specified business. An excess of loss treaty is an arrangement whereby a reinsurer assumes losses that exceed a specific retention of loss by the ceding company. Facultative reinsurance, on the other hand, is underwritten on a risk-by-risk basis, which allows the reinsurer to determine pricing for each exposure.

White Mountains Re writes both treaty and facultative reinsurance, as well as primary direct business. The majority of White Mountains Re premiums are derived from excess of loss and proportional reinsurance contracts, which in 2010 amounted to 71% and 15%, respectively, of its total net written premiums, while primary direct business represented 14% of total net written premiums.

A significant period of time normally elapses between the receipt of reinsurance premiums and the payment of reinsurance claims. While premiums are generally paid to the reinsurer upon inception of the underlying coverage, the claims process is delayed and generally begins upon the occurrence of an event causing an insured loss followed by: (1) the reporting of the loss by the insured to its broker or agent; (2) the reporting by the broker or agent to the ceding company; (3) the reporting by the ceding company to its reinsurance intermediary or agent; (4) the reporting by the reinsurance intermediary or agent to the reinsurer; (5) the ceding company's adjustment and payment of the loss; and (6) the payment to the ceding company by the reinsurer. During this time, reinsurers invest the premiums and earn investment income and generate net realized and unrealized investment gains and losses on investments. The period of time between the receipt of premiums and the payment of claims is typically longer for a reinsurer than for a primary insurer.

Classes of Business

The following table shows White Mountains Re's net written premiums by class of business for the years ended December 31, 2010, 2009 and 2008:

Business class

Year Ended December 31,

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

Millions	2010	2009	2008
Property catastrophe excess	\$ 185.4	\$ 188.0	\$ 202.0
Other property	243.7	260.5	283.6
Accident and health	211.4	184.3	189.1
Aviation and space	58.1	58.4	54.9
Trade credit	51.5	6.7	14.2
Marine	41.8	39.5	58.2
Casualty	32.8	30.4	95.6
Agriculture	27.2	25.7	22.4
Contingency	13.9	13.3	11.1
Total	\$ 865.8	\$ 806.8	\$ 931.1

For each of the years ended December 31, 2010, 2009, and 2008, 86%, 87%, and 88%, respectively, of White Mountains Re's net written premiums were for reinsurance products, with the remainder being insurance products.

Table of Contents

Property Catastrophe Excess

Property catastrophe excess of loss treaties cover losses from catastrophic events. White Mountains Re writes a worldwide portfolio with the largest concentration of exposure in Europe and the United States, and seeks to set prices and terms on treaties wherever possible. The current U.S. book has a national account focus supporting the lower and/or middle layers of large capacity programs. The catastrophe portfolio mainly consists of select large national, small regional and standard lines carriers. The exposures written in the international portfolio are diversified across many countries, regions and perils.

Other Property

White Mountains Re is a leader in the broker market for property treaties written on a proportional and excess of loss basis. For its international business, the book consists of treaty, written on both a proportional and non-proportional basis, facultative, and direct business, primarily in Europe. In the United States, the book predominantly centers on significant participations on proportional and excess of loss treaties for carefully chosen partners in the excess & surplus lines segment of the market.

Accident and Health

White Mountains Re's accident and health business is composed of three major classes of business. In the largest class of business, White Mountains Re is a surplus lines insurer of international medical expenses written through International Medical Group, which is the agent writing on White Mountains Re's behalf. The second major class of business comprises proportional treaties covering employer medical stop loss for per person (specific) and per employer (aggregate) exposures. The third major class of business comprises medical, health and personal accident coverages written on an excess treaty and facultative basis.

Aviation and Space

Aviation insurance covers loss of or damage to an aircraft and the aircraft operations liability to passengers, cargo and mail as well as to third parties. Additionally, liability arising out of non-aircraft operations such as hangars, airports and aircraft products can be covered. Space insurance covers loss of or damage to a satellite during launch and in orbit. The book consists of treaty, written on both on a proportional and non-proportional basis, facultative, and direct business.

Trade Credit

White Mountains Re, through WMRe Sirius, writes credit and bond reinsurance, mostly on companies with worldwide operations. Most debtors are based in Europe, representing approximately 65% of White Mountains Re's exposure. The bulk of the business is traditional short term

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

commercial credit insurance, covering pre-agreed domestic and export sales of goods and services with typical coverage periods of 60 to 120 days. Losses under these policies (protection of undisputed debts against declared insolvency and protracted default) are closely correlated to adverse changes in a respective country's gross national product.

Marine

White Mountains Re, primarily through WMRe Sirius, provides marine reinsurance, primarily written on an excess of loss and proportional basis. Coverage offered includes damage to ships and goods in transit, marine liability lines, and offshore energy industry insurance. The marine portfolio is diversified across many countries and regions.

Casualty

White Mountains Re's casualty treaty division accepts reinsurance submissions for all lines of general casualty and professional liability business. Due to declining casualty premium rates, the overall casualty book of business has decreased over time, with the expectation that the book could grow again when premium rates and contract terms improve to acceptable levels.

Agriculture

White Mountains Re primarily provides proportional coverage to companies writing U.S. government-sponsored Multi-Peril Crop Insurance (MPCI). White Mountains Re's participation is net of the government's stop loss reinsurance protection. White Mountains Re also provides coverage for crop-hail and certain named perils when bundled with MPCI business.

Contingency

White Mountains Re, through WMRe Sirius, underwrites contingency insurance, primarily for event cancellation and non-appearance, primarily on a direct policy and facultative reinsurance basis. Additionally, coverage for liabilities arising from contractual bonus, prize redemption, and over redemption are also offered. The contingency portfolio is diversified across many countries and regions.

Table of Contents**White Mountains Re Solutions**

White Mountains Re Solutions is a Connecticut-based division of White Mountains Re specializing in the acquisition and management of run-off insurance and reinsurance companies both in the United States and internationally. The White Mountains Re Solutions team is comprised of a dedicated group of financial, actuarial and claims professionals experienced in the management and resolution of complex insurance liabilities as well as the structuring of transactions designed to enable owners to exit an insurance business and extract trapped capital. Acquisitions typically involve purchases at a significant discount to book value and undergo an extensive due diligence process. Value to White Mountains Re is derived not only from the discount purchase gain but also from the investment income on insurance float on reserves under management, the settlement of claims below the carried level of reserves and the harvesting of other embedded assets including the value of shell companies and licenses.

Cumulative net income, after tax, related to 10 transactions executed by White Mountains Re Solutions from the formation of the division through December 31, 2010 exceeds \$140 million.

On February 26, 2010, White Mountains Re completed the acquisition of Central National from Drum Financial Corporation for \$5 million. Central National ceased writing business in 1989 and has operated under the control of the Nebraska Department of Insurance since 1990. The transaction resulted in a gain of \$13 million recorded in other revenues.

Geographic Concentration

The following table shows White Mountains Re's net written premiums by geographic region for the years ended December 31, 2010, 2009 and 2008:

Geographic region Millions	Year Ended December 31,		
	2010	2009	2008
United States	\$ 398.9	\$ 443.7	\$ 568.2
Europe	284.7	265.5	303.3
Canada, the Caribbean, Bermuda and Latin America	102.8	40.3	5.4
Asia and Other	79.4	57.3	54.2
Total	\$ 865.8	\$ 806.8	\$ 931.1

Marketing and Distribution

White Mountains Re obtains most of its reinsurance submissions from reinsurance intermediaries. Business submissions come from intermediaries that represent the ceding company. The process of placing an intermediary reinsurance program typically begins when a ceding company enlists the aid of a reinsurance intermediary in structuring a reinsurance program. The ceding company and the reinsurance intermediary will often consult with one or more lead reinsurers as to the pricing and contract terms for the reinsurance protection being sought.

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

Once the ceding company has approved the terms quoted by the lead reinsurer, the reinsurance intermediary will offer participation to qualified reinsurers until the program is fully subscribed. White Mountains Re considers both the reinsurance intermediary and the ceding company to be its clients in any placement. White Mountains Re has developed strong business relationships over a long period of time with the management of many of its ceding companies.

White Mountains Re pays ceding companies a ceding commission under most proportional reinsurance treaties and some excess of loss reinsurance treaties. The ceding commission is generally based on the ceding company's cost of acquiring and administering the business being reinsured (e.g., agent commissions, premium taxes and certain miscellaneous expenses). The ceding commissions paid to ceding companies constitute the majority of White Mountains Re's total acquisition costs. Additionally, White Mountains Re pays reinsurance intermediaries commissions based on negotiated percentages of the premium they produce by treaty or certificate.

During the years ended December 31, 2010, 2009, and 2008, White Mountains Re received no more than 10% of its gross written premiums from any individual ceding company. During the years ended December 31, 2010, 2009 and 2008, White Mountains Re received approximately 64%, 60% and 48%, respectively, of its gross reinsurance premiums written from three major, third-party reinsurance intermediaries as detailed in the following table:

Gross written premium by intermediary	Year Ended December 31,		
	2010	2009	2008
AON Re/Benfield(1)	35%	37%	30%
Guy Carpenter	19	16	12
Willis Re	10	7	6
	64%	60%	48%

(1) AON Re acquired Benfield during 2008

Table of Contents

Underwriting and Pricing

White Mountains Re maintains a disciplined underwriting strategy which, while considering overall exposure, focuses on writing more business when market terms and conditions are favorable and reducing business volume during soft markets when terms and conditions become less favorable. White Mountains Re offers clients a wide range of reinsurance products across multiple lines of business to satisfy their risk management needs.

White Mountains Re derives its reinsurance business from a broad spectrum of ceding companies, including national, regional, specialty, and excess and surplus lines writers, both internationally and in the United States. White Mountains Re's underwriters and pricing actuaries perform reviews of the underwriting, pricing, and general underwriting controls of potential ceding companies before quoting contract terms for its reinsurance products. White Mountains Re prices its products by assessing the desired return on the expected capital needed to write a given contract and on the expected underwriting results of the contract. White Mountains Re's pricing indications are based on a number of underwriting factors including historical results, analysis of exposure and estimates of future loss costs, a review of other programs displaying similar exposure characteristics and the ceding company's underwriting and claims experience. Additionally, in the United States, White Mountains Re's underwriters, actuaries and claims personnel perform audits of certain ceding companies. Generally, ceding company audits are not customary outside the United States. White Mountains Re's staff reviews the financial stability and creditworthiness of all ceding companies globally. Such reviews provide important input to support underwriting decisions.

Reinsurers do not have the stringent regulations with respect to contract terms and policy exclusions that are generally imposed on primary insurers. For example, the Terrorism Act is not applicable to reinsurers. As a result, terrorism exclusions on reinsurance contracts are dictated by the marketplace. White Mountains Re evaluates terrorism exposure from its ceding companies and applies exclusions as it deems appropriate and as are permitted by market conditions. Reinsurance on commercial risks written by White Mountains Re subsequent to the terrorist acts of September 11, 2001 generally contains clauses that exclude acts of terrorism certified under the Terrorism Act. Reinsurance on personal risks written by White Mountains Re subsequent to the terrorist acts of September 11, 2001 generally contains exclusions related to nuclear, biological, radiological and chemical attacks.

Competition

The worldwide insurance and reinsurance markets are highly competitive. Competition is influenced by a variety of factors, including price charged and other terms and conditions offered, financial strength ratings, prior history and relationships, as well as expertise and the speed at which the company has historically paid claims.

White Mountains Re competes for business in Europe, Bermuda, the United States, and other international markets with numerous global competitors. White Mountains Re's competitors include insurance and reinsurance companies as well as underwriting syndicates at Lloyd's of London. Some of the companies that White Mountains Re competes directly with include Alterra Capital Holdings, Ltd., Arch Capital Group Ltd., Axis Capital Holdings, Ltd., Endurance Specialty Holdings Ltd., Everest Re Group, Ltd., Flagstone Re Holdings SA, General Reinsurance Corporation, Hannover Ruckversicherung AG, Lloyd's of London, Montpelier Re Holdings, Ltd., Munich Re Group, Odyssey Re Holdings Corp., PartnerRe Ltd., Platinum Underwriters Holdings Ltd., Renaissance Re Holdings Ltd., Scor, Swiss Re Group, Transatlantic Holdings, Inc., Validus Holdings, Ltd., and XL Capital Ltd.

Claims Management

White Mountains Re maintains a staff of experienced insurance and reinsurance claim specialists. Its reinsurance claims specialists work closely with intermediaries to obtain specific claims information from ceding companies. Where customary and appropriate, White Mountains Re's claims staff perform selective on-site claim reviews to assess ceding companies' claim handling abilities and reserve techniques. In addition, White Mountains Re's claims specialists review loss information provided by ceding companies for adequacy and accuracy. The results of these claim reviews are shared with the underwriters and actuaries to assist them in pricing products and establishing loss reserves.

White Mountains Re also uses TPAs for certain claims, including claims arising from certain of White Mountains Re's run-off claims related to certain acquired companies. White Mountains Re's claims staff performs on-site claim audits of certain TPAs to ensure the propriety of the controls and processes over claims serviced by the TPAs.

Table of Contents

Catastrophe Risk Management

White Mountains Re has exposure to losses caused by hurricanes, earthquakes, tornadoes, winter storms, windstorms, floods, tsunamis, terrorist acts and other catastrophic events. In the normal course of business, White Mountains Re regularly manages its concentration of exposures to catastrophic events, primarily by limiting concentrations of exposure to what it deems acceptable levels and, if necessary, purchasing reinsurance. In addition, White Mountains Re seeks to limit losses that might arise from acts of terrorism in its insurance and reinsurance contracts by exclusionary provisions, where applicable. White Mountains Re also uses third-party global catastrophe models as well as its own proprietary models to calculate expected probable maximum loss (PML) from various natural catastrophic scenarios. White Mountains Re believes that its largest natural catastrophic exposures, net of reinsurance and based on a 250-year PML single event scenario, are European winter storms, United States Gulf Coast windstorms (i.e., Florida to Texas), California earthquakes, United States Atlantic Coast windstorms (i.e., Massachusetts to Florida) and, to a lesser extent, Japanese windstorms and earthquakes.

White Mountains Re monitors and prices its property catastrophe contracts using third-party software models and internally developed models as well as other methods. For contracts that White Mountains Re determines to have exposure to natural catastrophic perils, it models and assesses the exposure using the results in its underwriting process to ensure that the contracts it writes have an appropriate charge for the exposure.

Catastrophe exposure modeling is inherently uncertain due to process risk (the probability and magnitude of the underlying event, e.g. earthquake) and parameter risk (the probability of making inaccurate model assumptions). In particular, geographic and policy coverage data on the primary policies reinsured by White Mountains Re is essential. Accordingly, White Mountains Re's ability to predict its catastrophe exposure is dependent on the quality and accuracy of data obtained from its clients.

Additionally, catastrophe modeling is dependent upon several broad economic and scientific assumptions, such as storm surge (the water that is pushed toward the shore by the force of a windstorm), demand surge (the localized increase in prices of goods and services that often follow a catastrophe) and zone density (the percentage of insured perils that would be affected in a region by a catastrophe). Third-party modeling software also does not provide information for all territories or perils (e.g. tsunami) for which White Mountains Re writes business.

White Mountains Re does not believe that it can rely solely upon catastrophe modeling to measure its exposure to natural catastrophic risk. For example, the losses arising from Hurricane Katrina for both White Mountains Re and the industry were substantially in excess of losses previously predicted by third-party models from such an event. This was due to issues such as inadequate storm surge and demand surge assumptions in the models, as well as flooding from levees breaking which was not fully contemplated in these models. Correspondingly, White Mountains Re also assesses catastrophe risk by monitoring total limits exposed to a catastrophe event in key zones.

The following table provides an estimate of White Mountains Re's three largest PML zones at January 31, 2011:

(\$ in millions)	Modeled Industry Loss	Gross Loss	Net After Reinsurance and	White Mountains Re Net After-Tax Loss		
				Net After Tax	Net After-Tax as % of GAAP Capital(1)	Net After-Tax as % of GAAP Common

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

		Reinstatements				Shareholder's Equity(1)	
		1 in 250 year event					
Southeast U.S.	\$ 154,264	\$ 392	\$ 341	\$ 249	10%	14%	
Northeast U.S.	53,583	328	255	186	8%	11%	
Europe	43,912	633	239	176	7%	10%	
		1 in 10,000 year event					
Southeast U.S.	\$ 351,294	\$ 561	\$ 494	\$ 360	15%	20%	
Northeast U.S.	237,403	550	440	320	13%	18%	
Europe	117,649	1,001	405	298	12%	17%	

(1) GAAP capital and common shareholder's equity at December 31, 2010 for White Mountains Re is determined on a legal-entity basis.

To better manage its aggregate exposure to very large catastrophic events, White Mountains Re monitors the maximum net financial impact (NFI) it would suffer in the worst aggregate loss year modeled in third-party software (i.e., the 10,000-year global annual aggregate PML). The calculation of the NFI begins with the modeled 10,000-year global annual aggregate PML and takes account of estimated reinstatement premiums, reinsurance recoverables net of estimated uncollectible balances, and tax benefits. This amount is deducted from White Mountains Re's planned legal entity comprehensive net income for the year to arrive at the NFI. The NFI does not include the potential impact of the loss events on White Mountains Re's investment portfolio.

Table of Contents

For 2011, the NFI limit has been re-set at \$700 million, which is approximately 29% and 40% of White Mountains Re's total legal entity GAAP capital and common shareholder's equity at December 31, 2010, respectively. The NFI limit was set using foreign currency exchange rates and third-party property-catastrophe model versions as of October 31, 2010, and White Mountains Re's overall risk tolerances. The NFI calculation is subject to future fluctuation from a variety of factors, including foreign currency movements, changes in third-party models, market pricing, terms and conditions, as well as the availability and pricing of retrocessional protections. At January 31, 2011, White Mountains Re believes that it was under its NFI limit. White Mountains Re also monitors its NFI for global annual aggregate tail value at risk (TVaR) at the 100, 250, 500, and 1,000 year periods. TVaR represents the average loss for the named period through the 10,000 years (e.g., TVaR 250 represents the average loss for the worst forty modeled years).

White Mountains Re monitors gross and net property catastrophe occurrence limits by country and region globally. Occurrence limits for peak zones in Europe, Japan, and the United States are assessed versus modeled catastrophe risk as another measure in understanding total property catastrophe exposure to large events.

Actual losses incurred by White Mountains Re resulting from any particular catastrophic event may be substantially different than modeled losses from such event due to the process and parameter risks mentioned above.

The net after-tax loss table and NFI calculations referenced above reflect a full tax benefit at the applicable statutory rate in each jurisdiction, where applicable. There can be no assurance that a full tax benefit, or existing deferred tax assets, will be totally recoverable in each jurisdiction, or that a full or partial valuation allowance will not have to be applied against these amounts in White Mountains' GAAP financial statements.

Reinsurance Protection

White Mountains Re's reinsurance protection primarily consists of pro-rata and excess of loss protections to cover aviation, trade credit, and certain property exposures. White Mountains Re's property reinsurance provides both proportional and non-proportional protections for Europe, the Americas, Asia, the Middle East, and Australia. This reinsurance is designed to increase underwriting capacity where appropriate, and to reduce exposure both to large catastrophe losses and to a frequency of smaller loss events. Attachment points and coverage limits vary by region around the world. In addition to its proportional reinsurance purchases for certain property exposures, White Mountains Re also purchases excess of loss reinsurance for \$15 million of protection in excess of a retention of \$5 million for the facultative and direct property portfolios written by the Stockholm, London, and Hamburg branches. For 2011, industry loss warranties (ILW) for European wind exposures and floods with \$20 million of available limit were renewed, attaching at various levels. The ILWs in force for 2011 do not have reinstatement coverage after a loss event.

White Mountains Re also purchases excess of loss retrocessional protection for its non-U.S. and non-Japan earthquake-related exposures. At April 1, 2010, White Mountains Re renewed coverage for \$65 million of protection in excess of a \$45 million retention, which is effective through March 31, 2011. During 2010, White Mountains Re recovered the full \$65 million limit under the earthquake cover as a result of the Chilean Earthquake. Additionally, in 2010 White Mountains Re purchased \$60 million of available limit of ILWs for a potential New Madrid earthquake that attached with a \$20 billion event. This coverage was not renewed for 2011.

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

White Mountains Re's aviation reinsurance program is intended to reduce exposure to a frequency of small losses, a single large loss or a combination of both. In 2011, for the facultative and proportional aviation portfolio, reinsurance protection was purchased in excess of a market loss of \$150 million up to a full airline policy limit of \$2.25 billion. Non-proportional aviation writings are protected by a 15% quota share treaty and several excess of loss covers with varying attachment points and limits. The non-proportional account is also protected by \$22.5 million of protection in first event ILW coverage attaching at industry event levels between \$400 and \$750 million, in addition to \$4 million of available limit for second and third event ILW protections attaching at \$300 million and \$200 million per event, respectively.

In 2010, White Mountains Re ceded 25% of its trade credit business under a quota share retrocession, which supported growth in this line. The treaty was renewed for 2011 at a 19% cession percentage.

All of White Mountains Re's excess of loss reinsurance protections include provisions that reinstate coverage for the full available limit of the cover based on 100% or more of the original reinsurance premium, which is calculated proportionally to the loss limit being reinstated.

At December 31, 2010, White Mountains Re had \$19 million of reinsurance recoverables on paid losses and \$451 million of reinsurance recoverables on unpaid losses that will become recoverable if claims are paid in accordance with current reserve estimates. Because retrocessional reinsurance contracts do not relieve White Mountains Re of its obligation to its insureds, the collectability of balances due from White Mountains Re's reinsurers is critical to its financial strength. White Mountains Re monitors the financial strength and ratings of retrocessionaires on an ongoing basis. See **Note 4- Third-party Reinsurance** to the accompanying consolidated financial statements for a discussion of White Mountains Re's top reinsurers.

Table of Contents**Loss and Loss Adjustment Expense Reserves**

White Mountains Re establishes reserves that are estimates of future amounts needed to pay claims and related expenses for insured events that have already occurred. The process of estimating reserves involves a considerable degree of judgment by management and, as of any given date, is inherently uncertain. See **CRITICAL ACCOUNTING ESTIMATES** in **Management's Discussion and Analysis of Financial Condition and Results of Operations** for a full discussion regarding White Mountains Re's loss reserving process.

The following information presents (1) White Mountains Re's reserve development over the preceding ten years and (2) a reconciliation of reserves on a regulatory basis to reserves determined in accordance with GAAP, each as prescribed by Securities Act Industry Guide No. 6.

Section I of the 10 year table shows the estimated liability that was recorded at the end of each of the indicated years for all current and prior accident year unpaid loss and LAE. The liability represents the estimated amount of loss and LAE for claims that were unpaid at the balance sheet date, including IBNR reserves. In accordance with GAAP, the liability for unpaid loss and LAE is recorded in the balance sheet gross of the effects of reinsurance with an estimate of reinsurance recoverables arising from reinsurance contracts reported separately as an asset. The net balance represents the estimated amount of unpaid loss and LAE outstanding as of the balance sheet date, reduced by estimates of amounts recoverable under reinsurance contracts.

Section II shows the cumulative amount of net loss and LAE paid relating to recorded liabilities as of the end of each succeeding year. Section III shows the re-estimated amount of the previously recorded net liability as of the end of each succeeding year. Estimates of the liability for unpaid loss and LAE are increased or decreased as payments are made and more information regarding individual claims and trends, such as overall frequency and severity patterns, becomes known. Section IV shows the cumulative net (deficiency)/redundancy representing the aggregate change in the liability from original balance sheet dates and the re-estimated liability through December 31, 2010. Section V shows the re-estimated gross liability and re-estimated reinsurance recoverables through December 31, 2010. Section VI shows the cumulative gross (deficiency)/redundancy representing the aggregate change in the liability from original balance sheet dates and the re-estimated liability through December 31, 2010.

Table of Contents

The cumulative net deficiency in the table above includes adverse development from A&E claims. White Mountains Re's exposure to A&E claims results mainly from asbestos claims arising from treaty and facultative contracts written prior to 1985 at two companies acquired by WMRe America MONY Reinsurance Corporation in 1991 and Christiania General Insurance Corporation in 1996. As a result, the table above reflects reserve development on A&E business that was not underwritten by White Mountains Re.

White Mountains Re's net incurred losses from A&E claims have totaled \$212 million over the past ten years. Although losses arising from A&E claims were on contracts that were not underwritten by White Mountains Re, White Mountains Re is liable for any additional losses arising from such contracts. Accordingly, White Mountains Re cannot guarantee that it will not incur additional A&E losses in the future. Refer to

CRITICAL ACCOUNTING ESTIMATES in **Management's Discussion and Analysis of Financial Condition and Results of Operations** for further details of White Mountains Re's A&E reserves.

The following table reconciles loss and LAE reserves determined on a regulatory basis to loss and LAE reserves determined in accordance with GAAP at December 31, as follows:

Millions	December 31,		
	2010	2009	2008
Regulatory reserves	\$ 2,151.6	\$ 2,196.8	\$ 2,373.9
Reinsurance recoverable on unpaid losses and LAE(1)	1,190.4	965.4	1,058.8
Discount on loss reserves	16.4	27.1	105.4
Reserves allocated to Esurance	(286.9)	(333.4)	(299.3)
WM Life Re reserves (2)	(610.2)	(380.7)	(467.1)
Purchase accounting and other	(20.0)	(30.8)	(36.3)
GAAP reserves	\$ 2,441.3	\$ 2,444.4	\$ 2,735.4

(1) Represents adjustments made to add back reinsurance recoverables included with the presentation of reserves under regulatory accounting. Includes recoverables from WM Life Re business and recoverables on intercompany treaties that are eliminated in consolidation.

(2) WMRe Sirius fronted the reinsurance contracts for, and is 100% reinsured by, WM Life Re. These instruments are reported as reinsurance contracts under Swedish statutory regulations. For GAAP purposes, the liabilities are transferred to WM Life Re and reported as derivative instruments.

White Mountains Re's Intermediate Holdings Companies/Financing Activities

White Mountains Re's intermediate holding companies include White Mountains Re Group, Ltd. (WMRe Group) as well as various intermediate holding companies domiciled in the United States, Bermuda, Gibraltar, Luxembourg, the Netherlands and Sweden.

In May 2007, WMRe Group issued \$250 million non-cumulative perpetual preference shares, with a \$1,000 per share liquidation preference (the WMRe Preference Shares), and received \$246 million of proceeds, net of \$4 million of issuance costs and commissions. These shares were issued in an offering that was exempt from the registration requirements of the Securities Act of 1933. Holders of the WMRe Preference Shares receive dividends on a non-cumulative basis when and if declared by WMRe Group. The holders of the WMRe Preference Shares have the right

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

to elect two directors to WMRe Group's board in the event of non-payment of dividends for six quarterly dividend periods. The right ceases upon the payment of dividends for four quarterly periods or the redemption of the WMRe Preference Shares. In addition, WMRe Group may not declare or pay dividends on its common shares (other than stock dividends and dividends paid for purposes of any employee benefit plans of WMRe Group and its subsidiaries) unless it is current on its most recent dividend period. The dividend rate is fixed at an annual rate of 7.506% until June 30, 2017 and dividends are paid on a semi-annual basis. After June 30, 2017, the dividend rate will be paid at a floating annual rate, equal to the greater of (1) the 3 month LIBOR plus 3.20% or (2) 7.506% and dividends will be paid on a quarterly basis. The WMRe Preference Shares are redeemable solely at the discretion of WMRe Group on or after June 30, 2017 at their liquidation preference of \$1,000 per share, plus any declared but unpaid dividends. Prior to June 30, 2017, WMRe Group may elect to redeem the WMRe Preference Shares at an amount equal to the greater of (1) the aggregate liquidation preference of the shares to be redeemed and (2) the sum of the present values of the aggregate liquidation preference of the shares to be redeemed and the remaining scheduled dividend payments on the shares to be redeemed (excluding June 30, 2017), discounted to the redemption date on a semi-annual basis at a rate equal to the rate on a comparable treasury issue plus 45 basis points. In the event of liquidation of WMRe Group, the holders of the WMRe Preference Shares would have preference over the common shareholders and would receive a distribution equal to the liquidation preference per share, subject to availability of funds.

In March 2007, WMRe Group issued \$400 million face value of senior unsecured notes at an issue price of 99.715% (the WMRe Senior Notes). The WMRe Senior Notes, which were issued in an offering that was exempt from the registration requirements of the Securities Act of 1933, bear an annual interest rate of 6.375%, payable semi-annually in arrears on March 20 and September 20, until maturity in March 2017.

Table of Contents**ESURANCE**

Esurance, which is headquartered in San Francisco, writes personal auto insurance in 30 states through its website and over the phone and also sells other lines of personal insurance for unaffiliated insurance companies. Esurance also writes personal auto policies through select on-line agents and provides other insurance products through partnerships with industry leading online providers. The 30 states in which Esurance writes business represent approximately 87% of the premium volume for the entire U.S. personal auto insurance market. Esurance writes its policies using three insurance companies, Esurance Insurance Company, Esurance Insurance Company of New Jersey and Esurance Property and Casualty Insurance Company (collectively, the Esurance Insurance Companies), all of them rated A- (Excellent, the fourth highest of fifteen financial strength ratings with a stable outlook by A.M. Best). AFI, which is headquartered in southern California, earns commissions by selling personal auto, homeowners, renters and condo insurance policies online and over the phone using a comparison quoting platform. AFI sells policies in 50 states and the District of Columbia for many insurance companies, including Esurance. Esurance also earns commissions and fees by referring to unaffiliated insurance companies those shoppers that it cannot underwrite because of pricing or underwriting eligibility. By combining the capabilities of Esurance and AFI, the Esurance segment provides a better shopping experience for consumers and efficiently leverages its marketing expenses.

As of December 31, 2010, the Esurance segment had 839,000 policies-in-force; 509,000 underwritten by Esurance (24,000 of which were placed by AFI) and 304,000 written by unaffiliated insurers through AFI.

Over the past several years, Esurance has ceded a large percentage of its business to certain other subsidiaries of White Mountains primarily for capital management purposes. However, all reinsurance business transacted with affiliate subsidiaries, and the related capital supporting such business, is added back to the Esurance segment for reporting purposes because Esurance management is responsible for the gross results.

At December 31, 2010 and 2009, the Esurance segment had \$1,272 million and \$1,218 million of total assets and \$502 million and \$495 million of common shareholder's equity, respectively. The Esurance segment wrote approximately \$836 million and \$779 million in net written premiums in 2010 and 2009, respectively.

Geographic Concentration

For the years ended December 31, 2010, 2009 and 2008, Esurance had gross written premiums of \$839 million, \$781 million and \$826 million, respectively, which were distributed in the following states:

Gross written premiums by state	Year Ended December 31,		
	2010	2009	2008
California	20%	23%	24%
Florida	14	14	16
New Jersey	9	5	4
New York	6	7	7
Texas	5	5	5
Pennsylvania	4	4	4

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

Illinois	4	4	3
Michigan	4	4	4
Colorado	3	3	3
Other	31	31	30
Total	100%	100%	100%

For the year ended December 31, 2010, AFI's largest states were California (17% of policies-in-force), Texas (8%), Florida (6%), Pennsylvania (4%) and Ohio (4%). For 2009, AFI's largest states were California (17% of policies-in-force), Texas (7%), Florida (6%), Pennsylvania (4%) and Maryland (4%).

Table of Contents

Marketing and Distribution

Esurance targets technology-savvy consumers who rely on the internet to manage their financial services needs but also want the option of personal customer service. Esurance launched a new advertising campaign, "Techie Feely", in 2010, in which actors portray Esurance employees working together to serve customers over the phone and online in a humorous office setting. Esurance maintained its animated icon, "Erin Esurance", as a background element in the new campaign to provide a bridge to its previous advertising and to reinforce the brand. In 2010, Esurance continued to have a diverse marketing mix with advertising on national television, in select local markets, online through search engines (e.g., Google and Bing), and through a variety of insurance and financial services web sites. Esurance also has marketing relationships with sports, environmental, and community organizations. Esurance is the third largest issuer of personal auto insurance quotes online, behind only GEICO and Progressive, and also the third most recognizable brand for companies that sell personal auto insurance online.

Customer interaction with Esurance generally takes place through www.esurance.com or over the phone. On www.esurance.com, shoppers can obtain real-time quotes, compare quotes from other insurance companies, purchase their policies, report claims, monitor vehicle repairs, make changes to their policy and manage their accounts. AFI sells personal auto, homeowners, renters and condo insurance through its comparison quoting platform, which allows insurance shoppers to easily compare prices and purchase a policy from Esurance or over 20 other leading insurance carriers through AFI's website or by calling one of its in-house agents. AFI also sells insurance products through partnerships with financial services firms, retailers, insurance carriers, including Esurance, and a few large employer groups that provide insurance to their employees, by use of marketing programs that include placements on partner websites, inserts in partner mailers and phone transfers and referrals.

Underwriting and Pricing

Esurance collects and verifies detailed underwriting information in real-time while customers complete transactions online or over the phone. Real-time access to customer information allows Esurance to continually develop and refine its highly segmented, tiered pricing models, enhance its personal auto product, and optimize dollars spent on marketing. Esurance believes that its tiered pricing models have a greater statistical correlation with historical loss experience than traditional pricing models have shown. As a result, Esurance is able to respond quickly to changing loss trends and quote rates to customers that closely correspond to the individual risk characteristics of the customer, enabling it to focus on keeping insurance rates competitive without compromising its loss ratio targets.

Competition

Esurance competes with national and regional insurance companies. However, it competes most directly with other direct personal auto writers like GEICO and Progressive.

Esurance believes that strong customer service is essential to its ability to effectively compete. Esurance offers policy support to customers via its web site or through a service center that operates 24/365. Customers can choose to contact Esurance for policy support by phone, interactive voice response or email, and may report losses by phone or online. Esurance enables customers to conduct most of their policy service needs online, but also provides ready access to customer service representatives to answer any questions or provide any assistance needed. Esurance's goal is to provide service that is responsive to customer's needs while providing a choice of convenient interactive options.

Esurance's paperless business process allows it to significantly reduce operating costs typically associated with policy processing, verification and endorsement activities. As a result, Esurance is able to achieve efficient, low-cost acquisition and operating expense structures. Further, Esurance's paperless business model is the foundation of the company's environmental commitment, which helps differentiate Esurance from its competitors.

Claims Management

Esurance invests in technology to maintain state-of-the-art claims processing. Esurance seeks to use both internal-use and publicly-accessible technology that provides prompt, effective claims resolution at minimum cost. Esurance takes initial notice of claims at its loss reporting unit in Sioux Falls, South Dakota, which then assigns claims to regional claim offices in Arizona, California, Colorado, Florida, Georgia, New Jersey, New York, Texas and Wisconsin where claims are handled and adjusted.

The material damages unit attempts to resolve claims in a timely, fair and accurate manner using both in-house and external inspectors and appraisers. Although customers have the right to repair their vehicle wherever they choose, Esurance offers the customers access to a network of repair facilities located throughout the United States that allow them to monitor the repair process on-line via daily photo updates.

The claims department has a subrogation unit dedicated to recovering claims paid that are primarily obligations of other insurers or uninsured drivers. The claims department also includes investigators in the regional offices and a central special investigation unit that work in conjunction with local and national law enforcement agencies to mitigate insurance fraud.

Table of Contents

Claims representatives verify coverage, determine liability, assess damage (including injuries) and pay claims. The representatives compare their assessments with historical settlements on similar claims archived in externally-licensed databases to ensure that claims paid are fair and equitable. Esurance has tiered the claims representative positions based on experience and performance to maximize the department's efficiency, with simpler claims processed by lower-tier handlers. A central claims training unit provides these representatives and other claims staff in-house and on-line training proprietary developed to suit Esurance's operations.

The Esurance claims operations are reviewed by a customer service unit that conducts monthly surveys of insureds who have been involved in accidents. Also, Esurance annually contracts with an independent consulting firm to identify potential improvements in customer service and operational efficiencies. Lastly, the corporate claims audit team conducts annual comprehensive branch-level reviews to confirm accurate claims processing, and specialized audits where claim payment trends generate concern.

Catastrophe Risk Management

Esurance writes personal auto insurance that covers liabilities and physical damage arising from the operation of automobiles. The majority of Esurance's customers elect coverage for physical damage (72%), resulting in exposure to catastrophe losses from hurricanes, hailstorms, earthquakes and other acts of nature. Generally, catastrophe costs are low for personal auto in relation to other lines of business, such as homeowners and commercial property. Additionally, Esurance's broad geographic distribution limits its concentration of risk and the potential for losses to accumulate from a single event.

Loss and Loss Adjustment Expense Information

Esurance establishes loss and LAE reserves that are estimates of amounts needed to pay claims and related expenses in the future for insured events that have already occurred. The process of estimating reserves involves a considerable degree of judgment by management and, as of any given date, is inherently uncertain. See **CRITICAL ACCOUNTING ESTIMATES** in **Management's Discussion and Analysis of Financial Condition and Results of Operations** for a full discussion regarding Esurance's loss reserving process.

The following information presents (1) Esurance's loss and LAE reserve development over the ten years since inception and (2) a reconciliation of loss and LAE reserves on a Statutory basis to loss and LAE reserves determined in accordance with GAAP, each as prescribed by Securities Act Industry Guide No. 6.

Section I of the table shows the estimated liability that was recorded at the end of each of the indicated years for all current and prior accident year unpaid loss and LAE. The liability represents the estimated amount of loss and LAE for claims that were unpaid at the balance sheet date, including IBNR reserves. In accordance with GAAP, the liability for unpaid loss and LAE is recorded in the balance sheet gross of the effects of reinsurance with an estimate of reinsurance recoverables arising from reinsurance contracts reported separately as an asset. The net balance represents the estimated amount of unpaid loss and LAE outstanding as of the balance sheet date, reduced by estimates of amounts recoverable under reinsurance contracts.

Table of Contents

Section II shows the cumulative amount of net loss and LAE paid relating to recorded liabilities as of the end of each succeeding year. Section III shows the re-estimated amount of the previously recorded net liability as of the end of each succeeding year. Estimates of the liability for unpaid loss and LAE are increased or decreased as payments are made and more information regarding individual claims and trends, such as overall claim frequency and claim severity patterns, becomes known. Section IV shows the cumulative net (deficiency)/redundancy representing the aggregate change in the liability from original balance sheet dates and the re-estimated liability through December 31, 2010. Section V shows the re-estimated gross liability and re-estimated reinsurance recoverables through December 31, 2010. Section VI shows the cumulative gross (deficiency)/redundancy representing the aggregate change in the liability from original balance sheet dates and the re-estimated liability through December 31, 2010.

(\$ in millions)	Esurance Loss and LAE(1)(2)

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

- (1) The table consists of reserve information for the Esurance Insurance Companies and business ceded by Esurance to WMRe America, OneBeacon and WMRe Sirius.
- (2) Esurance became a subsidiary of White Mountains during 2000.

The following table reconciles loss and LAE reserves determined on a statutory basis to loss and LAE reserves determined in accordance with GAAP at December 31, as follows:

Millions	2010	December 31,		2008
		2009		
Statutory reserves	\$ 130.5	\$ 70.0	\$ 70.0	
Reserves allocated from White Mountains Re	286.9	333.4	299.3	
Reinsurance recoverable on unpaid losses and LAE(1)	33.1	19.5	1.4	
GAAP reserves	\$ 450.5	\$ 422.9	\$ 370.7	

-
- (1) Represents adjustments made to add back reinsurance recoverables included with the presentation of reserves under statutory accounting.

Table of Contents

OTHER OPERATIONS

White Mountains Other Operations segment consists of the Company and its intermediate holding companies, its wholly-owned investment management subsidiary (WM Advisors), White Mountains investment in common shares and warrants to purchase common shares of Symetra, the consolidated results of Tuckerman Fund I, its variable annuity reinsurance business (WM Life Re), which is in run-off, as well as various other entities not included in other segments. The Other Operations segment also included White Mountains investment in Delos prior to its disposition in December 2010, its weather risk management business prior to its disposition in August 2009 and the International American Group prior to its disposition in October 2008.

WM Advisors

WM Advisors is a registered investment adviser that manages White Mountains investments in fixed income and equity securities, including hedge funds and private equities. WM Advisors also has investment management agreements with third parties, most notably with Symetra. At December 31, 2010, WM Advisors had approximately \$32 billion in assets under management, \$8 billion of which related to consolidated subsidiaries of White Mountains.

WM Advisors has a sub-advisory agreement with Prospector Partners LLC (Prospector), a registered investment adviser, under which Prospector manages most of White Mountains publicly-traded common equity and convertible fixed maturity securities. Prospector also provides consulting and advisory services to White Mountains through a separate agreement on matters such as capital management, asset allocation, hedge fund and private equity investments and mergers and acquisitions.

WM Life Re

WM Life Re reinsures death and living benefit guarantees associated with certain variable annuities issued in Japan. White Mountains Re fronted the reinsurance contracts for and is 100% reinsured by WM Life Re. WM Life Re is in run-off.

WM Life Re has assumed the risk related to a shortfall between the account value and the guaranteed value that must be paid by the ceding company to an annuitant or to an annuitant's beneficiary in accordance with the underlying annuity contracts. The guaranteed value of the annuity contracts is equal to the initial single premium paid by the annuitant. The annuity accounts are invested in four index funds: a Japanese government bond fund indexed to the Nomura Bond Performance Index (Nomura BPI) (roughly 35%), a foreign government bond fund indexed to the Citi World Group Government Bond Index, excluding Japan (WGBI) (roughly 35%), a Japanese equity fund indexed to the TOPIX Total Return Index (roughly 15%) and a foreign equity fund indexed to the MSCI Kokusai Total Return Index (roughly 15%). The account is rebalanced monthly to maintain these same investment allocations. As of December 31, 2010, annuity contracts mature within 5 years on average (with a maximum of 5½ years and a minimum of 4½ years remaining). The guarantee made by the ceding company to its annuitants was economically equivalent to guaranteeing that the underlying investment accounts would earn a return of approximately 2.7% per annum. The average account value of annuity contracts covered by WM Life Re was approximately 104% of their guarantee value at the inception of the reinsurance contracts. Accordingly, the guarantee made in WM Life Re's contracts was economically equivalent to guaranteeing that the underlying investment accounts would earn a return of approximately 2.3% per annum.

WM Life Re reinsured ¥200 billion (approximately \$1.7 billion at the then current exchange rate) of guarantees in September 2006 and an additional ¥56 billion (approximately \$0.5 billion at the then current exchange rate) in March 2007. WM Life Re has not subsequently written any additional business. As of December 31, 2010, the total guarantee value was approximately ¥237.4 billion (approximately \$2.9 billion at exchange rates on that date). The average annual premium charged by WM Life Re under these contracts is equal to 1.11% times the total guarantee value.

WM Life Re uses derivative instruments, including put options, interest rate swaps, total return swaps on bond indices, forward contracts and futures contracts on major equity indices, currency pairs and government bonds, to mitigate the market risks associated with changes in the fair value of the reinsured variable annuity guarantees. WM Life Re measures its net exposure to changes in relevant interest rates, foreign exchange rates, implied volatilities and equity markets on a daily basis and adjusts its economic hedge positions within risk guidelines established by senior management. WM Life Re continually fair values its liability and the related hedge assets. The guarantee is economically substantially similar to having sold put options on a basket of the four index funds. WM Life Re also monitors the effects of annuitant related experience against actuarial assumptions (surrender and mortality rates) on a weekly basis and adjusts relevant assumptions and economic hedge positions if required.

Under the terms of its reinsurance contracts, WM Life Re is required to hold eligible assets (generally cash, short-term investments and hedge assets such as options and futures) equal to the fair value of the liability, as defined in the reinsurance contracts, for the benefit of the cedant. Increases in the fair value of the liability in excess of the increase in value of the hedge assets, such as occurs in the case of decreases in surrender assumptions or underperformance of the hedging portfolio, must therefore be funded on a current basis while the actual amounts that must be paid to settle the contracts may not be known and generally will not become payable for a number of years. White Mountains contributed an additional \$45 million, \$133 million and \$105 million into WM Life Re during 2010, 2009 and 2008, respectively, to fulfill this requirement.

Table of Contents

See **Item 7 - CRITICAL ACCOUNTING ESTIMATES - Fair Value Measurements** for a discussion of the sensitivity of WM Life Re s results to changes in market and annuitant-related variables.

Tuckerman Fund I and Tuckerman Fund II

White Mountains owns approximately 94% of Tuckerman Fund I and approximately 48% of Tuckerman Fund II, (collectively, the Tuckerman Funds). The Tuckerman Funds are managed by Tuckerman Capital, a private investment firm that focuses on acquisitions of small manufacturing companies. Tuckerman Capital focuses its acquisition efforts on companies with enterprise values ranging from \$5 million to \$25 million and with established track records of success. The companies owned by the Tuckerman Funds are manufacturers of highly engineered, non-commodity products across a broad range of industries.

Tuckerman Fund I is consolidated within White Mountains financial statements and Tuckerman Fund II was consolidated until January 1, 2010. At December 31, 2010 and 2009, Tuckerman Fund I had \$19 million and \$20 million of total assets and accounted for \$7 million and \$6 million of White Mountains net assets. At December 31, 2009, Tuckerman Fund II had \$56 million of total assets and accounted for \$17 million of White Mountains net assets. During 2008, White Mountains investment in Tuckerman Fund II was transferred from Other Operations to the White Mountains Re segment.

Weather Risk Management

During 2006, White Mountains began selling weather and weather contingent derivative products through its subsidiary, Galileo Weather Risk Management Ltd (Galileo). Weather derivatives, which usually take the form of swaps or options, are contracts with financial settlements based on the performance of an index linked to a quantifiable weather element, such as temperature, precipitation, snowfall or windspeed. Weather contingent derivative products are weather derivatives with an additional commodity price trigger.

During 2009, White Mountains sold Galileo Weather Risk Management Advisors LLC, Galileo Weather Risk Management Ltd. and Galileo Weather Risks Advisors Limited for nominal consideration. White Mountains retained the outstanding weather derivative contracts and stopped writing any new contracts. Effective December 2009, White Mountains entered into an agreement to novate the remaining outstanding weather derivative contracts to an unrelated third party. White Mountains was released from any liability related to the weather derivative contracts and all guaranties related to the weather business were terminated.

Berkshire Exchange

On October 31, 2008, White Mountains completed the transaction with Berkshire Hathaway Inc. (Berkshire) that was announced on March 10, 2008, through which Berkshire exchanged substantially all of its 16.3% stake in White Mountains (1,634,921 of its 1,724,200 common shares) for 100% of a White Mountains subsidiary which held Commercial Casualty Insurance Company (CCIC), the International American Group and \$708 million in cash (the Berkshire Exchange). Upon the closing of the exchange transaction, CCIC and the International American Group had a combined fair value of \$85 million and a combined GAAP book value of \$59 million.

INVESTMENTS

White Mountains' investment philosophy has historically been to maximize long-term total returns (after tax) while taking prudent levels of risk and maintaining a diversified portfolio. Under White Mountains' philosophy, each dollar of after-tax investment income or investment gains (realized or unrealized) is valued equally.

In response to significant declines in market levels, heightened market volatility and a lack of market liquidity during 2008 and 2009, White Mountains shifted its focus from total return to capital preservation. In particular, White Mountains significantly reduced the size of its equity portfolio and managed its fixed income portfolio to avoid realizing losses.

During 2010 White Mountains gradually shifted back from a focus on capital preservation to its traditional total return investment philosophy, a process it intends to continue on an opportunistic basis.

White Mountains' investment portfolio mix as of December 31, 2010 consisted in large part of high-quality, fixed maturity investments and short-term investments, as well as equity investments and other long-term investments, such as hedge funds and private equities. White Mountains' management believes that prudent levels of investments in common equity securities and other long-term investments within its investment portfolio are likely to enhance long-term after-tax total returns without significantly increasing the risk profile of the portfolio. See **Portfolio Composition** in **Management's Discussion and Analysis of Financial Condition and Results of Operations**.

White Mountains' overall fixed maturity investment strategy is to purchase securities that are attractively priced in relation to its investment risks. White Mountains also actively manages the average duration of the portfolio. Duration is about 2 years including short-term investments and about 3 years excluding short-term investments at December 31, 2010.

Prospector's equity investment strategy is to maximize absolute risk-adjusted return through investments in a variety of equity and equity-related instruments, using a bottom-up, value investing approach. Preservation of capital is of the utmost importance. Prospector invests in relatively concentrated positions in the United States and other developed markets.

Table of Contents

Prospector Fund

White Mountains owns approximately 62% of the limited partnership interests in Prospector Offshore Fund, Ltd. and OneBeacon owns approximately 65% of the limited partnership interests in Prospector Turtle Fund (collectively, the Prospector Funds). These funds are managed by Prospector, a registered investment adviser, and are consolidated within White Mountains' financial statements. The Prospector Funds are hedge funds that pursue investment opportunities in a variety of equity and equity-related instruments, chiefly in the financial services sector.

At December 31, 2010 and 2009, the Prospector Funds had \$236 million and \$200 million of total assets and accounted for \$97 million and \$92 million of White Mountains' net assets.

Investments in Unconsolidated Affiliates

Symetra

In 2004, White Mountains, Berkshire and several other private investors capitalized Symetra in order to purchase the life and investment operations of Safeco Corporation for \$1.35 billion. The acquired companies focus mainly on group insurance, individual life insurance, structured settlements and retirement services. Symetra had an initial capitalization of approximately \$1.4 billion, consisting of \$1,065 million of common equity and \$315 million of debt. White Mountains invested \$195 million in Symetra in exchange for 2.0 million common shares of Symetra. In addition, White Mountains and Berkshire each received warrants to acquire an additional 1.1 million common shares of Symetra at \$100 per share. Two White Mountains designees serve on Symetra's seven member board of directors. White Mountains accounts for its investment in common shares of Symetra under the equity method and accounts for its Symetra warrants as a derivative investment at fair value.

On October 26, 2007, Symetra executed a 7.7-for-1 stock dividend (substantially equivalent to an 8.7-for-1 stock split) that increased White Mountains' investment in Symetra's common shares from 2.0 million to 17.4 million, and the number of warrants to acquire additional common shares from 1.1 million at \$100 per share to 9.5 million at \$11.49 per share. The stock split, affected in the form of a dividend, had no effect on White Mountains' percentage of ownership in Symetra.

In January 2010, Symetra completed an initial public offering at a price of \$12 per share, whereby 25.3 million primary shares were sold to the public and 9.7 million secondary shares were sold by existing shareholders. White Mountains did not sell any of its shares of Symetra in the offering. As a result of the offering, White Mountains' ownership in Symetra has decreased from 19% to approximately 15% of the outstanding common shares of Symetra and from 24% to approximately 20% of Symetra on a fully-converted basis including the warrants.

The following table presents the financial strength ratings assigned to Symetra's principal insurance operating subsidiaries:

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

	A.M. Best(1)	Standard & Poor s(2)	Moody s(3)	Fitch(4)
Rating	A (Excellent)	A (Strong)	A3 (Good)	A+ (Strong)
Outlook	Stable	Negative	Stable	Negative

-
- (1) A is the third highest of sixteen financial strength ratings assigned by A.M. Best.
 - (2) A is the sixth highest of twenty-one financial strength ratings assigned by Standard & Poor s.
 - (3) A3 is the seventh highest of twenty-one financial strength ratings assigned by Moody s.
 - (4) A+ is the fifth highest of twenty-four financial strength ratings assigned by Fitch.

Symetra's total revenues and net income for the years ended December 31, 2010, 2009, and 2008 were \$1,879 million and \$201 million, \$1,714 million and \$128 million, and \$1,451 million and \$22 million. As of December 31, 2010 and 2009, Symetra had total assets of \$25.6 billion and \$22.4 billion and shareholders' equity of \$2.4 billion and \$1.4 billion. Symetra's shareholders' equity excluding unrealized gains (losses) from its fixed maturity investments was \$1.9 billion and \$1.5 billion at December 31, 2010 and 2009.

As of December 31, 2010 and 2009, White Mountains' investment in Symetra common shares was \$287 million and \$278 million, excluding \$64 million and \$(9) million, respectively, of equity in unrealized gains (losses) from Symetra's fixed maturity investments. As of December 31, 2010 and 2009, White Mountains' investment in Symetra warrants was \$37 million and \$39 million. Since inception, White Mountains has received cash dividends from Symetra of \$49 million on its common share investment and \$27 million on its warrant investment.

Delos

On August 3, 2006, White Mountains Re sold Sirius America to Delos. As part of the transaction, White Mountains invested \$32 million in Delos, representing an equity interest of approximately 18%, which was accounted for as an equity method investment in an unconsolidated affiliate. In December 2010, White Mountains sold its investment in Delos for \$22 million.

Table of Contents

Pentelia

White Mountains obtained an equity interest of 33% in Pentelia Capital Management (PCM) for \$1.6 million in April 2007. This investment is accounted for under the equity method. As of December 31, 2010, White Mountains investment in PCM was \$2 million. White Mountains also holds an investment Pentelia Investment Limited (PIL), a fund that invests in insurance-related investment assets and is held as an other long-term investment. As of December 31, 2010, the carrying value of White Mountains investment in PIL was \$24.0 million.

REGULATION

United States

White Mountains U.S.-based insurance and reinsurance operating subsidiaries are subject to regulation and supervision in each of the states where they are domiciled and licensed to conduct business. Generally, regulatory authorities have broad supervisory and administrative powers over such matters as licenses, standards of solvency, premium rates, policy forms, investments, security deposits, methods of accounting, form and content of financial statements, reserves for unpaid loss and LAE, reinsurance, minimum capital and surplus requirements, dividends and other distributions to shareholders, periodic examinations and annual and other report filings. In general, such regulation is for the protection of policyholders rather than shareholders. White Mountains believes that it is in compliance with all applicable laws and regulations pertaining to its business that would have a material effect on its financial position in the event of non-compliance.

Over the last several years most states have implemented laws that establish standards for current, as well as continued, state accreditation. In addition, the National Association of Insurance Commissioners (NAIC) has adopted risk-based capital (RBC) standards for property and casualty insurers as a means of monitoring certain aspects affecting the overall financial condition of insurance companies. The current RBC ratios of White Mountains active U.S.-based insurance and reinsurance operating subsidiaries are satisfactory and such ratios are not expected to result in any adverse regulatory action. White Mountains is not aware of any current recommendations by regulatory authorities that would be expected to have a material effect on its results of operations or liquidity.

As a condition of its license to do business in certain states, White Mountains U.S.-based insurance and reinsurance operating subsidiaries are required to participate in mandatory shared market mechanisms. Each state dictates the types of insurance and the level of coverage that must be provided. The most common type of shared market mechanism in which White Mountains is required to participate is an assigned risk plan. Many states operate assigned risk plans. These plans require insurers licensed within the applicable state to accept the applications for insurance policies of customers who are unable to obtain insurance in the voluntary market. The total number of such policies an insurer is required to accept is based on its market share of voluntary business in the state. Underwriting results related to assigned risk plans are typically adverse. Accordingly, OneBeacon may be required to underwrite policies with a higher risk of loss than it would otherwise accept.

Reinsurance facilities are another type of shared market mechanism. Reinsurance facilities require an insurance company to accept all applications submitted by certain state designated agents. The reinsurance facility then allows the insurer to cede some of its business to the reinsurance facility so that the facility will reimburse the insurer for claims paid on ceded business. Typically, however, reinsurance facilities operate at a deficit, which is funded through assessments against the same insurers. As a result, OneBeacon could be required to underwrite policies with a higher risk of loss than it would otherwise voluntarily accept.

The insurance laws of many states generally provide that property and casualty insurers doing business in those states belong to a statutory property and casualty guaranty association. The purpose of these guaranty associations is to protect policyholders by requiring that solvent property and casualty insurers pay certain insurance claims of insolvent insurers. These guaranty associations generally pay these claims by assessing solvent insurers proportionately based on the insurer's share of voluntary written premiums in the state. While most guaranty associations provide for recovery of assessments through rate increases, surcharges or premium tax credits, there is no assurance that insurers will ultimately recover these assessments. At December 31, 2010, the reserve for such assessments at OneBeacon totaled \$16 million.

Many states have laws and regulations that limit an insurer's ability to exit a market. For example, certain states limit a private passenger automobile insurer's ability to cancel and non-renew policies. Furthermore, certain states prohibit an insurer from withdrawing from one or more lines of insurance business in the state, unless the state regulators approve the company's withdrawal plans. State regulators may refuse to approve such plans on the grounds that they could lead to market disruption. Such laws and regulations may restrict White Mountains' ability to exit unprofitable markets.

Nearly all states have insurance laws requiring personal property and casualty insurers to file price schedules, policy or coverage forms, and other information with the state's regulatory authority. In most cases, such price schedules and/or policy forms must be approved prior to use. While pricing laws vary from state to state, their objectives are generally to ensure that prices are adequate, not excessive and not discriminatory.

White Mountains' U.S.-based insurance and reinsurance operating subsidiaries are subject to state laws and regulations that require investment portfolio diversification and that limit the amount of investment in certain categories. Non-compliance may cause non-conforming investments to be non-admitted in measuring statutory surplus and, in some instances, may require divestiture. White Mountains' investment portfolio at December 31, 2010 complied with such laws and regulations in all material respects.

Table of Contents

One of the primary sources of cash inflows for the Company and certain of its intermediary holding companies is dividends received from its insurance and reinsurance operating subsidiaries. Under the insurance laws of the states under which White Mountains U.S.-based insurance and reinsurance operating subsidiaries are domiciled, an insurer is restricted with respect to the timing or the amount of dividends it may pay without prior approval by regulatory authorities. See **Item 7 - LIQUIDITY AND CAPITAL RESOURCES - Dividend Capacity** for further discussion.

White Mountains is subject to regulation under certain state insurance holding company acts. These regulations contain reporting requirements relating to the capital structure, ownership, financial condition and general business operations of White Mountains insurance and reinsurance operating subsidiaries. These regulations also contain special reporting and prior approval requirements with respect to certain transactions among affiliates. Since the Company is an insurance holding company, the domiciliary states of its insurance and reinsurance operating subsidiaries impose regulatory application and approval requirements on acquisitions of White Mountains common shares which may be deemed to confer control over those subsidiaries, as that concept is defined under the applicable state laws. Acquisition of 10% of White Mountains common shares, or in some states as little as 5%, may be deemed to confer control under the insurance laws of some jurisdictions, and the application process for approval can be extensive and time consuming.

While the federal government does not directly regulate the insurance business, federal legislation and administrative policies affect the insurance industry. In addition, legislation has been introduced from time to time in recent years that, if enacted, could result in the federal government assuming a more direct role in the regulation of the insurance industry. In December of 2007, the U.S. government extended the Terrorism Act until December 31, 2014. The Terrorism Act was originally enacted in 2002 and established a federal backstop for commercial property and casualty losses, including workers compensation, resulting from acts of terrorism by or on behalf of any foreign person or foreign interest. As extended, the law now covers domestic acts of terrorism. In exchange for this backstop, primary insurers are required to make coverage available to commercial insureds for losses from acts of terrorism as specified in the Terrorism Act. OneBeacon is actively complying with the requirements of the Terrorism Act in order to ensure its ability to be reimbursed by the federal government for any losses it may incur as a result of future terrorist acts. (See **Terrorism** in the **ONEBEACON** section of this Item for a further discussion of the Terrorism Act). A number of additional enacted and pending legislative measures could lead to increased consolidation and increased competition for business and for capital in the financial services industry. White Mountains cannot predict whether any state or federal measures will be adopted to change the nature or scope of the regulation of the insurance business or what effect such measures may have on its insurance and reinsurance operations.

The insurance industry is highly regulated at the state level. In addition, federal legislation was enacted in July 2010 that includes a limited expansion of the federal government's ability to oversee and regulate the insurance industry. Specifically, the Dodd-Frank Wall Street Reform and Consumer Protection Act (the Dodd-Frank Act) created the Federal Insurance Office (FIO) within the Treasury Department, which is responsible for gathering information and monitoring the insurance industry to identify gaps in the regulation of insurers that could contribute to a systemic crisis in the insurance industry or U.S. financial system. In addition, the FIO can recommend changes to state insurance laws and regulations. White Mountains cannot predict whether the FIO will recommend any changes or whether states will adopt any such changes.

Environmental cleanup of polluted waste sites is subject to both federal and state regulation. The Comprehensive Environmental Response Compensation and Liability Act of 1980 (Superfund) and comparable state statutes govern the cleanup and restoration of waste sites by potentially responsible parties (PRPs). These laws can impose liability for the entire cost of clean-up upon any PRP, regardless of fault. The insurance industry in general is involved in extensive litigation regarding coverage issues arising out of the cleanup of waste sites by insured PRPs and as a result has disputed many such claims. From time to time, comprehensive Superfund reform proposals are introduced in Congress, but none has yet been enacted. At this time, it remains unclear as to whether Superfund reform legislation will be enacted or that any such legislation will provide for a fair, effective and cost-efficient system for settlement of Superfund related claims. The NICO Cover includes coverage for such exposures at OneBeacon; however, there can be no assurance that the coverage provided under the NICO Cover will ultimately prove to be adequate.

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

Effective January 1, 2010, the NAIC adopted amendments to the Annual Financial Reporting Model Regulation, or the Model Audit Rule (MAR). The amendments to the MAR include provisions very similar to Sarbanes-Oxley requirements for public companies and require certain insurance companies to appoint audit committees to oversee accounting and financial reporting processes as well as the audit of the financial statements of the insurer. Audit committees also are required to appoint independent auditors, among other things. The designated audit committee must receive reports regarding significant deficiencies, material weaknesses and solvency concerns at the insurance company level. Certain insurance companies also will be required to file a management report on internal control over financial reporting annually beginning with the fiscal year ending December 31, 2010.

Table of Contents

Sweden

WMRe Sirius is subject to regulation and supervision by the Swedish Financial Supervisory Authorities (the FSA). As Sweden is a member of the European Union (the EU), the FSA supervision is recognized across all locations within the EU. Generally, the FSA has broad supervisory and administrative powers over such matters as licenses, standards of solvency, investments, methods of accounting, form and content of financial statements, minimum capital and surplus requirements, annual and other report filings. In general, such regulation is for the protection of policyholders rather than shareholders. White Mountains believes that it is in compliance with all applicable laws and regulations pertaining to its business that would have a material effect on its financial position in the event of non-compliance.

In accordance with provisions of Swedish law, WMRe Sirius is permitted to transfer up to the full amount of its pre-tax income, subject to certain limitations, into an untaxed reserve referred to as a safety reserve, which equaled \$1.4 billion at December 31, 2010. Under GAAP, an amount equal to the safety reserve, net of the related deferred tax liability established at the Swedish tax rate of 26.3%, is classified as shareholder's equity. Generally, this deferred tax liability is only required to be paid by WMRe Sirius if it fails to maintain predetermined levels of premium writings and loss reserves in future years. As a result of the indefinite deferral of these taxes, Swedish regulatory authorities do not apply any taxes to the safety reserve when calculating solvency capital under Swedish insurance regulations. Accordingly, under local statutory requirements, an amount equal to the deferred tax liability on WMRe Sirius' safety reserve (\$379 million at December 31, 2010) is included in solvency capital. Access to the safety reserve is restricted to coverage of insurance losses. Access for any other purpose requires the approval of Swedish regulatory authorities. Similar to the approach taken by Swedish regulatory authorities, most major rating agencies generally include the \$1.4 billion balance of the safety reserve, without any provision for deferred taxes, in WMRe Sirius' regulatory capital when assessing WMRe Sirius' financial strength.

In addition, the European Commission, which acts as the initiator of action and executive body of the EU, has adopted a directive on insurance regulation and solvency requirements known as Solvency II, which is scheduled to become effective January 1, 2013. Solvency II has set the framework for the next generation of supervisory rules for insurance and reinsurance companies in the EU, and will impose economic risk-based solvency requirements across all EU Member States. The aim of the Solvency II framework is to ensure that insurance and reinsurance undertakings are financially sound and can withstand adverse events in order to protect policyholders and the stability of the financial system as a whole. In addition to quantitative requirements, such as capital requirements (Pillar 1), insurance and reinsurance companies will be required to meet qualitative requirements relating to governance and risk-management (Pillar 2), as well as to regularly disclose information to supervisors and to the public (Pillar 3). WMRe Sirius will be required to comply with Solvency II requirements. In addition, it is possible that the NAIC could adopt part or all of Solvency II including minimum capital requirements that could be in excess of the current minimum capital requirements for White Mountains' U.S.-based insurance and reinsurance subsidiaries established by state regulations. If the NAIC adopted Solvency II including additional capital requirements, White Mountains' U.S.-based insurance and reinsurance operating subsidiaries' businesses and results of operations could be materially impacted.

Bermuda Insurance Regulation

The Insurance Act 1978 of Bermuda and related regulations, as amended (the Insurance Act), regulates the insurance businesses of WMRe Bermuda, Scandinavian Re, the Bermuda branch of WMRe Sirius and WM Life Re, and provides that no person may carry on any insurance business in or from within Bermuda unless registered as an insurer under the Insurance Act by the Bermuda Monetary Authority (BMA). The BMA, in deciding whether to grant registration, has broad discretion to act as it thinks fit in the public interest. The BMA is required by the Insurance Act to determine whether the applicant is a fit and proper body to be engaged in the insurance business and, in particular, whether it has, or has available to it, adequate knowledge and expertise to operate an insurance business. In addition, the BMA is required by the Insurance Act to determine whether a person who proposes to control 10 percent, 20 percent, 33 percent or 50 percent (as applicable) of the voting powers of a Bermuda registered insurer or its parent company is a fit and proper person to exercise such degree of control.

The continued registration of an applicant as an insurer is subject to the applicant complying with the terms of its registration and such other conditions as the BMA may impose from time to time. The Insurance Act also grants to the BMA powers to supervise, investigate and intervene in the affairs of insurance companies.

The Insurance Act imposes on Bermuda insurance companies solvency and liquidity standards as well as auditing and reporting requirements. White Mountains believes that it is in compliance with all applicable laws and regulations pertaining to its business that would have a material effect on its financial position in the event of non-compliance.

Table of Contents

Certain Other Bermuda Law Considerations

The Company is an exempted company organized under the Companies Act 1981 of Bermuda (the "Companies Act"). As a result, the Company needs to comply with the provisions of the Companies Act regulating the payment of dividends and making of distributions from contributed surplus. A company is prohibited from declaring or paying a dividend, or making a distribution out of contributed surplus, if there are reasonable grounds for believing that:

- (1) the company is, or would after the payment be, unable to pay its liabilities as they become due; or
- (2) the realizable value of the company's assets would thereby be less than the aggregate of its liabilities and its issued share capital and share premium accounts.

Under the Company's bye-laws, each common share is entitled to dividends if, and when, dividends are declared by its board of directors, subject to any preferred dividend rights of the holders of any preference shares. Issued share capital is the aggregate par value of the company's issued shares, and the share premium account is the aggregate amount paid for issued shares over and above their par value. Share premium accounts may be reduced in certain limited circumstances. In addition, the Companies Act regulates return of capital, reduction of capital and any purchase or redemption of shares by the Company.

Although the Company is incorporated in Bermuda, it has been designated as a non-resident of Bermuda for exchange control purposes by the BMA. Pursuant to its non-resident status, the Company may hold any currency other than Bermuda dollars and convert that currency into any other currency, other than Bermuda dollars, without restriction.

Shares may be offered or sold in Bermuda only in compliance with the provisions of the Investment Business Act of 2003 and the Exchange Control Act 1972, and related regulations of Bermuda which regulate the sale of securities in Bermuda. In addition, specific permission is required from the BMA pursuant to the provisions of the Exchange Control Act 1972 and related regulations, for all issuances and transfers of securities of Bermuda companies, other than in cases where the BMA has granted a general permission. The BMA in its policy dated June 1, 2005 provides that where any equity securities, including the Company's common shares, of a Bermuda company are listed on an appointed stock exchange, general permission is given for the issue and subsequent transfer of any securities of a company from and/or to a non-resident, for as long as any equity securities of such company remain so listed. The New York Stock Exchange is deemed to be an appointed stock exchange under Bermuda law. Notwithstanding the above general permission, the BMA has granted the Company permission to, subject to its common shares being listed on an appointed stock exchange, (a) issue and transfer its shares, up to the amount of its authorized capital from time to time, to persons resident and non-resident of Bermuda for exchange control purposes; (b) issue and transfer options, warrants, depositary receipts, rights, and other securities; and (c) issue and transfer loan notes and other debt instruments and options, warrants, receipts, rights over loan notes and other debt instruments to persons resident and non-resident of Bermuda for exchange control purposes.

Under Bermuda law, exempted companies are companies formed for the purpose of conducting business outside Bermuda from a principal place in Bermuda. As an exempted company, the Company may not, without the express authorization of the Bermuda legislature or under a license granted by the Bermuda Minister of Finance, participate in various specified business transactions, including:

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

- the acquisition or holding of land in Bermuda, except land held by way of lease or tenancy agreement which is required for the Company's business and held for a term not exceeding 50 years, or which is used to provide accommodation or recreational facilities for the Company's officers and employees and held with the consent of the Bermuda Minister of Finance, for a term not exceeding 21 years;
- the taking of mortgages on land in Bermuda in excess of \$50,000;
- the acquisition of any bonds or debentures secured by any land in Bermuda, other than certain types of Bermuda government or public authority securities; or
- subject to some exceptions, the carrying on of business of any kind in Bermuda for which the Company is not licensed in Bermuda.

Under Bermuda law, non-Bermudians (other than spouses of Bermudians) may not engage in any gainful occupation in Bermuda without an appropriate governmental work permit. Work permits may be granted or extended by the Bermuda government upon showing that, after proper public advertisement in most cases, no Bermudian (or spouse of a Bermudian) is available who meets the minimum standard requirements for the advertised position. In 2001, the Bermuda government announced a new policy limiting the duration of work permits to six years, with certain exemptions for key employees.

Table of Contents**RATINGS**

Insurance and reinsurance companies are evaluated by various rating agencies in order to measure each company's financial strength. Higher ratings generally indicate financial stability and a stronger ability to pay claims. White Mountains believes that strong ratings are important factors in the marketing of insurance and reinsurance products and services to agents and consumers and ceding companies.

The following table presents the financial strength ratings assigned to White Mountains' principal insurance and reinsurance operating subsidiaries as of February 25, 2011:

	A.M. Best(1)	Standard & Poor's(2)	Moody's(3)	Fitch(4)
OneBeacon				
Rating	A (Excellent)	A- (Strong)	A2 (Good)	A (Strong)
Outlook	Stable	Stable	Negative	Stable
WMRe Sirius				
Rating	A (Excellent)	A- (Strong)	A3 (Good)	A- (Strong)
Outlook	Stable	Stable	Stable	Stable
WMRe America				
Rating	A- (Excellent)	A- (Strong)	A3 (Good)	A- (Strong)
Outlook	Stable	Stable	Stable	Stable
Esurance				
Rating	A- (Excellent)	No Rating	No Rating	No Rating
Outlook	Stable	N/A	N/A	N/A

-
- (1) A is the third highest and A- is the fourth highest of fifteen financial strength ratings assigned by A.M. Best.
- (2) A- is the seventh highest of twenty-one financial strength ratings assigned by Standard & Poor's.
- (3) A2 is the sixth highest and A3 is the seventh highest of twenty-one financial strength ratings assigned by Moody's.
- (4) A is the sixth highest and A- is the seventh highest of twenty-one financial strength ratings assigned by Fitch.

EMPLOYEES

As of December 31, 2010, White Mountains employed 4,110 persons (consisting of 37 persons at the Company and its intermediate holding companies, 1,500 persons at OneBeacon, 436 persons at White Mountains Re, 2,096 persons at Esurance (including AFI), 31 persons at WM Advisors, and 10 persons at WM Life Re). Management believes that White Mountains has satisfactory relations with its employees.

AVAILABLE INFORMATION

The Company is subject to the informational reporting requirements of the Exchange Act. In accordance therewith, the Company files reports, proxy statements and other information with the SEC. These documents are available at www.whitemountains.com shortly after such material is electronically filed with or furnished to the SEC. In addition, the Company's code of business conduct and ethics as well as the various charters governing the actions of certain of the Company's Committees of its Board of Directors, including its Audit Committee, Compensation Committee and Nominating and Governance Committee, are available at www.whitemountains.com.

The Company will provide to any shareholder, upon request and without charge, copies of these documents (excluding any applicable exhibits unless specifically requested). Written or telephone requests should be directed to the Corporate Secretary, White Mountains Insurance Group, Ltd., 14 Wesley Street, Hamilton, HM 11 Bermuda, telephone number (441) 278-3160. Additionally, all such documents are physically available at the Company's registered office at Clarendon House, 2 Church Street, Hamilton, HM 11 Bermuda.

Table of Contents

Item 1A. Risk Factors

The information contained in this report may contain forward-looking statements within the meaning of Section 27A of the Securities Act of 1933 and Section 21E of the Securities Exchange Act of 1934. See **FORWARD-LOOKING STATEMENTS** (page 95) for specific important factors that could cause actual results to differ materially from those contained in forward-looking statements. The Company's actual future results and trends may differ materially depending on a variety of factors including, but not limited to, the risks and uncertainties discussed below.

Our investment portfolio may suffer reduced returns or losses which could adversely affect our results of operations and financial condition. Adverse changes in interest rates, foreign currency exchange rates, equity markets, debt markets or market volatility could result in significant losses to the fair value of our investment portfolio and could generate significant losses in our life reinsurance business.

Our investment portfolio consists of fixed maturity securities, convertible fixed maturity securities, short-term investments, common equity securities and other long-term investments such as hedge funds and private equities. We invest to maximize after-tax total risk-adjusted return over the long term subject to our investment guidelines and various regulatory restrictions. However, investing entails substantial risks. We cannot assure you that we will achieve our investment objectives, and our investment performance may vary substantially over time. Investment returns are an important part of our strategy to grow book value, and fluctuations in the fixed income or equity markets could impair our results of operations and financial condition. Investments generate both income, consisting primarily of interest earned on fixed maturity investments and dividends earned on equity securities, and realized and unrealized investment gains on securities.

Both the investment income we generate and the fair market value of our investment portfolio are affected by general economic and market conditions, including fluctuations in interest rates, foreign currency exchange rates, debt market levels, equity market levels and market volatility. Interest rates are highly sensitive to many factors, including governmental monetary policies, domestic and international economic and political conditions and other factors beyond our control. Although we attempt to manage the risks of changes in interest rates, we may not be able to do so. In particular, a significant increase in interest rates could result in significant losses in the fair value of our investment portfolio and, consequently, could have an adverse effect on our results of operations and financial condition. We are exposed to changes in equity markets. Because a portion of our investment portfolio is invested in securities denominated in currencies other than U.S. dollar, the value of our portfolio is sensitive to changes in foreign currency rates. We are also exposed to changes in the volatility levels of various investment markets. The underlying conditions are outside of our control and could adversely affect the value of our investments and our results of operations and financial condition.

Our life reinsurance business has reinsured the risk related to a shortfall between the account value and the guaranteed value that must be paid in respect of certain Japanese variable annuity contracts. We use derivative instruments to mitigate the market risks associated with changes in the fair value of these guarantees. These derivative instruments include put options, interest rate swaps, total return swaps and futures contracts on major equity indices, currency pairs and government bonds. However, these derivatives may not fully mitigate our exposure to the changes in the fair value of the guarantees. For example, WM Life Re reported significant losses in 2008 because the increase in the fair value of its liabilities exceeded the increase in the fair value of the related derivative instruments.

The fair value of our life reinsurance contracts and the related derivative instruments is significantly affected by general economic and market conditions such as equity market returns and volatility, interest rate fluctuations and foreign currency exchange rates. These conditions are outside of our control and could generate significant losses that would adversely affect our results of operations and financial condition.

Unpredictable catastrophic events could adversely affect our results of operations and financial condition.

We write insurance and reinsurance policies that cover losses from catastrophic events. Our policies cover unpredictable natural and other disasters, such as hurricanes, windstorms, earthquakes, floods, fires and explosions. In recent years, the frequency of major weather-related catastrophes has increased. Our exposure to catastrophic damage in the Northeastern United States is the largest single natural risk to our business. We also have significant exposure to a major earthquake or series of earthquakes in California, the Midwestern United States or Japan and windstorm damage in Northern Europe, the United States Atlantic Coast (i.e., Massachusetts to Florida) and the United States Gulf Coast region (i.e., Florida to Texas). In addition, we are exposed to losses from terrorist attacks, such as the attacks on the United States on September 11, 2001.

The extent of losses from a catastrophe is a function of both the total amount of insured exposure in the area affected by the event and the severity of the event. Increases in the value of insured property, the effects of inflation and changes in cyclical weather patterns may increase the severity of claims from catastrophic events in the future. Claims from catastrophic events could reduce our earnings and cause substantial volatility in our results of operations for any fiscal quarter or year and adversely affect our financial condition. Our ability to write new insurance and reinsurance policies could also be impacted as a result of corresponding reductions in our capital levels.

Table of Contents

We manage our exposure to catastrophic losses by limiting the aggregate insured value of policies in geographic areas with exposure to catastrophic events by estimating a PML for many different catastrophe scenarios and by buying reinsurance. To manage and analyze aggregate insured values and PML, we use a variety of tools, including catastrophe modeling software packages. Our estimates of PML are dependent on many variables, including assumptions about the demand surge and storm surge, loss adjustment expenses, insurance-to-value and storm intensity in the aftermath of weather-related catastrophes utilized to model the event, the relationship of the actual event to the modeled event and the quality of data provided to us by ceding companies (in the case of our reinsurance operations). Accordingly, if our assumptions about the variables are incorrect, the losses we might incur from an actual catastrophe could be materially higher than our expectation of losses generated from modeled catastrophe scenarios and our results of operations and financial condition could be materially adversely affected.

We may not maintain favorable financial strength or creditworthiness ratings which could adversely affect our ability to conduct business.

Third-party rating agencies assess and rate the financial strength, including claims-paying ability, of insurers and reinsurers. These ratings are based upon criteria established by the rating agencies and are subject to revision at any time at the sole discretion of the agencies. Some of the criteria relate to general economic conditions and other circumstances outside the rated company's control. These financial strength ratings are used by policyholders, agents and brokers as an important means of assessing the suitability of insurers and reinsurers as business counterparties and have become an increasingly important factor in establishing the competitive position of insurance and reinsurance companies. These financial strength ratings do not refer to our ability to meet non-insurance obligations and are not a recommendation to purchase or discontinue any policy or contract issued by us or to buy, hold or sell our securities. The maintenance of an A- or better financial strength rating from A.M. Best and/or Standard & Poor's is particularly important to our ability to write new or renewal business in most markets. General creditworthiness ratings are used by existing or potential investors to assess the likelihood of repayment on a particular debt issue. The maintenance of an investment grade creditworthiness rating (e.g., BBB- or better from Standard & Poor's and Baa3 or better from Moody's) is particularly important to our ability to raise new debt with acceptable terms. We believe that strong creditworthiness ratings are important factors that provide better financial flexibility when issuing new debt or restructuring existing debt.

Rating agencies periodically evaluate us to confirm that we continue to meet the criteria of the ratings previously assigned to us. See **RATINGS** in Item 1 for a summary of financial strength ratings on our significant insurance and reinsurance subsidiaries. A downgrade, withdrawal or negative watch/outlook of our financial strength ratings could severely limit or prevent our insurance and reinsurance subsidiaries from writing new insurance or reinsurance policies or renewing existing policies, which could have a material adverse effect on our results of operations and financial condition. A downgrade, withdrawal or negative watch/outlook of our creditworthiness ratings could limit our ability to raise new debt or could make new debt more costly and/or have more restrictive conditions.

Additionally, the majority of WMRe America's assumed reinsurance contracts contain optional cancellation, commutation and/or funding provisions that would be triggered if A.M. Best and/or Standard & Poor's were to downgrade the financial strength ratings of WMRe America below A- or if the surplus of WMRe America were to substantially decrease (generally, in excess of 20%). A client may choose to exercise these rights depending on, among other things, the reasons for such a downgrade, the extent of the downgrade, the prevailing market conditions, the degree of unexpired coverage, and the pricing and availability of replacement reinsurance coverage. We cannot predict in advance how many of our clients would actually exercise such rights but widespread exercise of these options could be materially adverse.

Table of Contents

The property and casualty insurance and reinsurance industries are highly competitive and cyclical and we may not be able to compete effectively in the future.

The property and casualty insurance and reinsurance industries are highly competitive and have historically been cyclical, experiencing periods of severe price competition and less selective underwriting standards (soft markets) followed by periods of relatively high prices and more selective underwriting standards (hard markets). OneBeacon s businesses each compete against a different subset of companies. In general terms, OneBeacon competes to varying degrees in one or more of its businesses with most of the large multi-line insurance companies, such as ACE Limited, Chartis Insurance, Chubb Group of Insurance Companies, CNA Insurance, Liberty Mutual Insurance Group, Travelers Insurance Group Holdings Inc. and Zurich Financial Services Ltd. OneBeacon also competes with most of the specialty companies, such as Allied World Assurance Company, HCC Insurance Holdings, Inc., Ironshore Inc., Markel Corporation, RLI Corp. and W.R. Berkley Corporation. Lastly, OneBeacon competes in certain of its businesses with various local and regional insurance companies. White Mountains Re competes with numerous reinsurance companies throughout the world, including Alterra Capital Holdings, Ltd., Arch Capital Group Ltd., Axis Capital Holdings, Ltd., Endurance Specialty Holdings Ltd., Everest Re Group, Ltd., Flagstone Re Holdings SA, General Reinsurance Corporation, Hannover Ruckversicherung AG, Lloyd s of London, Montpelier Re, Munich Re Group, Odyssey Re Holdings Corporation, Partner Re Ltd., Platinum Underwriters Holdings Ltd., Renaissance Re Holdings Ltd., Scor, Swiss Re Group, Transatlantic Holdings, Inc., Validus Holdings, Ltd. and XL Capital Ltd. Esurance competes with national and regional personal automobile insurance companies, though Esurance s main competition comes from other direct writers like Progressive, GEICO, and 21st Century. Many of these competitors have greater resources than we do and have established long-term and continuing business relationships throughout the insurance industry, which can be a significant competitive advantage for them.

OneBeacon offers its products through a number of distribution partners, consisting of independent agents, regional and national brokers, wholesalers and MGAs. Many of OneBeacon s distribution partners offer insurance products sold by other insurance companies in addition to OneBeacon s insurance products. We could be adversely affected if these distribution partners place more of their business with other insurance companies as a result of price competition or other factors. Additionally, OneBeacon s distribution partners compete with other independent agents, regional and national brokers, wholesalers and MGAs to place insurance products. We could be adversely affected if OneBeacon s distribution partners are unable to maintain a competitive position in their respective markets.

The supply of reinsurance is related to prevailing prices, the level of insured losses and the level of industry surplus which, in turn, may fluctuate in response to changes in rates of return earned in the reinsurance industry. As a result, the reinsurance business historically has been a cyclical industry characterized by periods of intense price competition due to excess underwriting capacity as well as periods when shortages of capacity permitted favorable premium rate levels. For example, the industry experienced a soft casualty market of lower prices and less favorable terms from 1997 to 2001 during which profitability suffered while the losses incurred from the 2005 U.S. hurricanes triggered price increases. In addition to these considerations, changes in the frequency and severity of losses suffered by insureds and insurers significantly affect the reinsurance industry cycle. Soft insurance markets could lead to a significant reduction in premium rates, less favorable contract terms, fewer submissions for our underwriting capacity and potential regulatory response.

We expect to continue to experience the effects of the insurance and reinsurance industries cyclicity. If we are unable to maintain our competitive position throughout soft and hard market cycles, our insurance and reinsurance businesses may be adversely affected and we may not be able to compete effectively in the future.

Our loss and loss adjustment expense reserves may be inadequate to cover our ultimate liability for losses and as a result our financial results could be adversely affected.

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

We are required to maintain adequate reserves to cover our estimated ultimate liabilities for loss and loss adjustment expenses. Loss and LAE reserves are typically comprised of (1) case reserves for claims reported and (2) IBNR reserves for losses that have occurred but for which claims have not yet been reported which include a provision for expected future development on case reserves. These reserves are estimates based on actuarial, claims and underwriting assessments of what we believe the settlement and administration of claims will cost based on facts and circumstances then known to us. Because of the uncertainties that surround estimating ultimate loss and LAE reserves, we cannot be certain that our reserves are adequate and actual claims and claim expenses paid might exceed our reserves due to the uncertainties that surround estimating loss and LAE reserves. If we determine in the future that our reserves are insufficient to cover our actual losses and LAE, we would have to add to our reserves, which could have a material adverse effect on our results of operations and financial condition. For example, in 2008 WMRe America increased reserves by \$181 million related to adverse loss development from its casualty reinsurance book.

For further discussion of our loss and LAE reserves, including our asbestos and environmental reserves, see **Item 7 - CRITICAL ACCOUNTING ESTIMATES - Loss and Loss Adjustment Expenses** .

Table of Contents

We may not be able to successfully alleviate risk through reinsurance and retrocessional arrangements. Additionally, we may not be able to collect all amounts due from our reinsurers under our existing reinsurance and retrocessional arrangements.

We attempt to limit our risk of loss through reinsurance and retrocessional arrangements. Retrocessional arrangements refer to reinsurance purchased by a reinsurer to cover its own risks assumed from ceding companies. The availability and cost of reinsurance and retrocessional protection is subject to market conditions, which are outside of our control. In addition, the coverage under our reinsurance and retrocessional arrangements may be inadequate to cover our future liabilities. As a result, we may not be able to successfully alleviate risk through these arrangements, which could have a material adverse effect on our results of operations and financial condition.

We are not relieved of our obligations to our policyholders or ceding companies by purchasing reinsurance. Accordingly, we are subject to credit risk with respect to our reinsurance and retrocessions in the event that a reinsurer is unable to pay amounts owed to us as a result of a deterioration in its financial condition. A number of reinsurers in the industry experienced such a deterioration in the aftermath of the 2001 terrorist attacks and the active 2005 hurricane season. To mitigate this risk, we annually review and periodically monitor our reinsurers' financial condition. While we believe that our reinsurers' financial condition is strong, it is possible that one or more of our reinsurers will be significantly adversely affected by future significant loss events, causing them to be unable to pay amounts owed to us. We also may be unable to recover amounts due under our reinsurance and retrocessional arrangements if our reinsurers choose to withhold payment due to a dispute or other factors beyond our control.

Our reinsurance operations are largely dependent upon ceding companies' evaluation of risk.

White Mountains Re, like other reinsurance companies that write treaty reinsurance, generally does not evaluate separately each of the assumed individual insurance risks under our reinsurance contracts. As such, we are largely dependent upon the cedents' original underwriting decisions. We are subject to the risk that the cedents may not have adequately or accurately evaluated the risks that they have insured, and we have reinsured, and that the premiums ceded may not adequately compensate us for the risks we assume. If our reserves are insufficient to cover our actual loss and LAE arising from our treaty reinsurance business, we would have to strengthen our reserves and incur charges to our earnings. These charges could be significant and could have a material adverse effect on our results of operations and financial condition.

We have significant foreign operations that expose us to certain additional risks, including foreign currency risks and political risk.

White Mountains Re conducts a significant portion of its business outside of the United States. As a result, a significant portion of our assets, liabilities, revenues and expenses are denominated in currencies other than the U.S. dollar and are therefore subject to foreign currency risk. Our foreign currency risk cannot be eliminated entirely and significant changes in foreign exchange rates may adversely affect our results of operations and financial condition.

Our foreign operations are also subject to legal, political and operational risks that may be greater than those present in the United States. As a result, our operations at these foreign locations could be temporarily or permanently disrupted.

Our debt, preferred stock and related service obligations could adversely affect our business.

As of December 31, 2010, we had approximately \$820 million face value of indebtedness and \$250 million face value of non-cumulative perpetual preference shares outstanding.

Our ability to meet our debt, preferred stock and related service obligations will depend on our future performance, which will be affected by financial, business, economic, regulatory and other factors, many of which are beyond our control. We are also subject to restrictive financial covenants contained in our revolving credit facility that require us to maintain specified financial ratios and to satisfy financial condition tests. These covenants can restrict us in several ways, including our ability to incur additional indebtedness. A breach of these covenants could result in an event of default under our revolving credit facility which would allow lenders to declare any amounts owed under the revolving credit facility to be immediately due and payable. A failure to pay principal and interest on our revolving credit facility in excess of \$25 million could trigger cross acceleration provisions contained in the indenture of the OBH Senior Notes. A failure to pay principal and interest on the OBH Senior Notes or the WMRe Senior Notes could trigger a cross acceleration provision on our revolving credit facility. If we do not have enough cash to repay accelerated debt, we may be required to refinance all or part of our existing debt, sell assets, borrow more cash or sell equity. We cannot assure you that we will be able to accomplish any of these alternatives on terms acceptable to us, if at all.

We could incur additional indebtedness and issue additional preferred stock in the future. To the extent new debt, new preferred stock and other obligations are added to our and our subsidiaries' current debt and preferred stock levels, the risks described in the previous paragraph would increase.

Table of Contents

We are a holding company with no direct operations, and our insurance and reinsurance subsidiaries' ability to pay dividends to us is restricted by law.

As a holding company with no direct operations, we rely on net investment income and dividends, tax sharing payments and other permitted payments from our subsidiaries to pay our expenses. Our subsidiaries may not be able to generate cash flow sufficient to pay a dividend or distribute funds to us. In addition, under the insurance laws of the jurisdictions in which our insurance and reinsurance subsidiaries are domiciled, an insurer or reinsurer is restricted with respect to the timing or the amount of dividends it may pay without prior approval by regulatory authorities.

Our top tier regulated insurance and reinsurance operating subsidiaries have the ability to pay approximately \$600 million of dividends without prior approval of regulatory authorities during 2011. At December 31, 2010, the Company and its intermediate holding companies had approximately \$338 million of net unrestricted cash, short-term investments and fixed maturity investments and approximately \$119 million of common equity securities and other long-term investments outside of its regulated insurance and reinsurance operating subsidiaries and \$475 million available to be drawn from its revolving credit facility. In addition, At December 31, 2010: OneBeacon Ltd. and its intermediate holding companies had approximately \$372 million of net unrestricted cash, short-term investments and fixed maturity investments outside of its regulated and unregulated insurance operating subsidiaries; White Mountains Re and its intermediate holding companies had \$78 million of net unrestricted cash, short-term investments and fixed maturity investments and \$16 million of other long-term investments outside of WMRe America and WMRe Sirius; and Esurance had \$14 million of net unrestricted cash, short-term investments and fixed maturity investments outside of Esurance Insurance Company and AFI. See **Item 7 - LIQUIDITY AND CAPITAL RESOURCES Dividend Capacity**. Management believes that our cash balances, cash flows from operations and cash flows from investments are adequate to meet expected cash requirements for the foreseeable future on both a holding company and operating subsidiary level. However, if our insurance and reinsurance subsidiaries cannot pay dividends in future periods or if we contribute additional funds to fulfill our obligations under our life reinsurance contracts, we may have difficulty servicing our debt, paying dividends on our common and preferred shares and meeting our holding company expenses. For additional information relating to insurance and reinsurance regulations governing our operations, see **Regulation**.

We may suffer losses from unfavorable outcomes from litigation and other legal proceedings.

In the ordinary course of business, we are subject to litigation and other legal proceedings as part of the claims process, the outcomes of which are uncertain. We maintain reserves for these legal proceedings as part of our loss and LAE reserves. We also maintain separate reserves for legal proceedings that are not related to the claims process. In the event of an unfavorable outcome in one or more legal matters, our ultimate liability may be in excess of amounts we have currently reserved for and such additional amounts may be material to our results of operations and financial condition. For a description of our material legal proceedings, see **Item 3 Legal Proceedings**.

As industry practices and legal, judicial, social and other conditions change, unexpected and unintended issues related to claims and coverage may emerge. These issues may adversely affect our results of operations and financial condition by either extending coverage beyond our underwriting intent or by increasing the number and size of claims. In some instances, these changes may not become apparent until sometime after we have issued insurance and reinsurance contracts that are affected by the changes.

Regulation may restrict our ability to operate.

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

The insurance and reinsurance industries are subject to extensive regulation under U.S., state and foreign laws. Governmental agencies have broad administrative power to regulate many aspects of the insurance business, which include premium rates, marketing practices, advertising, policy forms and capital adequacy. These governmental agencies are concerned primarily with the protection of policyholders rather than shareholders. Insurance laws and regulations impose restrictions on the amount and type of investments, prescribe solvency standards that must be met and maintained and require the maintenance of reserves. In our insurance underwriting, we rely heavily upon information gathered from third parties such as credit report agencies and other data aggregators. The use of this information is also highly regulated and any changes to the current regulatory structure could materially affect how we underwrite and price premiums.

Changes in laws and regulations may restrict our ability to operate and/or have an adverse effect upon the profitability of our business within a given jurisdiction. For example, legislation has been passed in Florida that significantly changes the reinsurance protection provided by the Florida Hurricane Catastrophe Fund to companies that write business in Florida. The new legislation also contains a provision that will disallow insurers that write homeowners insurance elsewhere in the United States to write automobile insurance in Florida unless they also write homeowners insurance in Florida. The impact of the new legislation, which could be adverse, upon White Mountains' insurance and reinsurance business in Florida cannot be determined until regulations interpreting the legislation are promulgated. In addition, state and federal legislation has been proposed to establish catastrophe funds and underwriting in coastal areas which could impact our business.

Table of Contents

In addition, the Dodd-Frank Act, which was enacted in July 2010, created the Federal Insurance Office (the FIO) within the Treasury Department. The FIO is responsible for gathering information and monitoring the insurance industry to identify gaps in the regulation of insurers that could contribute to a systemic crisis in the insurance industry or U.S. financial system. The FIO also has the authority to recommend changes to state insurance laws and regulations. We cannot predict whether the FIO will recommend any such changes, whether any states will adopt any such changes, or what effect such changes may have on our insurance operations.

Our non-U.S. reinsurance companies are subject to foreign regulations, including Solvency II which will be effective January 1, 2013 and will regulate insurance firms that operate in the European Union. Solvency II was enacted to reduce the risk that insurers would not be able to pay claims to policyholders as well as promote financial stability through minimum capital requirements as well as other requirements for the governance and risk management of insurers and the supervision of insurers. We cannot predict what regulations will be adopted to implement Solvency II nor the impact of such regulation upon our non-U.S. reinsurers. In addition, it is possible that the NAIC could adopt part or all of Solvency II including minimum capital requirements that could be in excess of our current minimum capital requirements established by state regulations. If the NAIC adopted Solvency II including additional capital requirements, our business and results of operations could be materially impacted.

We could be subject to litigation, regulatory enforcement action and damage to our reputation if confidential personally identifiable information is mishandled or stolen.

Our operating entities, particularly OneBeacon, Esurance and AFI, collect and store personally identifiable information from consumers. If our data security measures fail and personally identifiable information is mishandled or stolen, we could be subject to litigation and regulatory enforcement action. Further, such a failure could damage our reputation, which could have an adverse effect on our business, results of operations and financial condition.

We have surety bonds in Latin America and write credit and bond reinsurance that could expose us to an economic downturn, or changes to the regulatory or legal environment, in certain countries and regions as a whole.

White Mountains Re, through WRe America, has run-off operations that include a material amount of Latin American facultative surety exposure (our Surety Book). Surety bonding describes a class of business where insurance companies guarantee various contractual commitments assumed by contractors and other businesses. The majority of WRe America's Surety Book is comprised of performance, advanced payment, payment and maintenance bonds, which is insurance obtained by service providers, such as construction firms, to protect against their failure to complete service engagements according to contractual terms. As of December 31, 2010, the maximum certificate or bonding value in our Surety Book (a measurement which does not factor in the percentage to completion of any of the projects supported by the bonds) was approximately \$318 million. Approximately 92% of our Surety Book is represented by contracts in Colombia and 6% is represented in Brazil. While our Surety Book is comprised of a large number of contracts with relatively small individual exposures, a severe economic downturn that adversely affects the capital supply or business environment in Colombia or Brazil individually, or Latin America generally, or a significant shift in the regulatory or legal environments governing access to collateral in these markets, could have a material adverse effect on our results of operations and financial condition. In the event current recessionary pressures increase or continue over time, it is possible that certain South American countries could experience significant economic downturn that could affect the risks in White Mountains Re's Surety Book.

In addition, White Mountains Re, through WRe Sirius, writes trade credit and bond reinsurance, mostly on companies with worldwide operations. Most debtors are based in Europe, representing approximately 65% of White Mountains Re's exposure. The bulk of the business is

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

traditional short term commercial credit insurance, covering pre-agreed domestic and export sales of goods and services with typical coverage periods of 60 to 120 days. Losses under these policies (protection of undisputed debts against declared insolvency and protracted default) are closely correlated to reductions in a respective country's gross national product. As such, a recession that occurs in a relatively short period of time and impacts multiple countries could result in higher than expected losses. As of December 31, 2010, White Mountains Re's contractual loss exposure for this business is approximately \$2.0 billion. However, because of the short-term nature of this business, ceding companies can actively adjust credit exposures and substantially mitigate the effect of an economic crisis or a major bankruptcy. The exposure estimate described above does not reflect any positive impact from dynamic limit management nor does it include credit for recoveries.

Table of Contents

Our profitability may be adversely impacted by inflation, legislative actions and judicial decisions.

The effects of inflation could cause claim costs to rise in the future. In addition, legislative actions and judicial decisions continue to broaden liability and policy definitions and to increase the severity of claim payments, such as described above with respect to asbestos and environmental claims. To the extent inflation and these legislative actions and judicial decisions cause claim costs to increase above reserves established for these claims, we will be required to increase our loss and LAE reserves with a corresponding reduction in our net income in the period in which the deficiency is identified.

We have successfully created shareholder value through acquisitions and dispositions of insurance and reinsurance entities. We may not be able to continue to create shareholder value through such transactions in the future.

In past years, we have completed numerous acquisitions and dispositions of insurance and reinsurance entities, many of which have contributed significantly to our growth in adjusted book value. Failure to identify and complete future acquisition and disposition opportunities could limit our ability to achieve our target returns. Even if we were to identify and complete future acquisition or disposition opportunities, there is no assurance that such opportunities will ultimately achieve their anticipated benefits.

We have significant deferred tax assets which we may be unable to utilize if we do not generate sufficient future taxable income.

We have a deferred tax asset of \$160 million (net of a valuation allowance of \$110 million) related to net operating loss carryforwards, capital loss carryforwards and tax credit carryforwards at December 31, 2010 that are subject to carryforward limitations in the United States. We also have a deferred tax asset of \$165 million (net of a valuation allowance of \$380 million) related to net operating loss carryforwards in Luxembourg that are not subject to limitation at December 31, 2010. The loss carryforwards in Luxembourg primarily relate to tax deductible write-downs in 2007 and 2008 of investments in U.S. subsidiaries held by Luxembourg subsidiaries. Utilization of these assets and other assets included in our worldwide net deferred tax asset of \$127 million (net of a valuation allowance of \$484 million) is dependent on generating sufficient future taxable income of the appropriate character (i.e., ordinary income or capital gains) in the appropriate jurisdiction. If it is determined that it is more likely than not that sufficient future taxable income will not be generated, we would be required to increase the valuation allowance in future periods, which would have an adverse effect on our results of operations and financial condition.

We may become subject to taxes in Bermuda after 2016.

We have received a standard assurance from the Bermuda Minister of Finance, under Bermuda's Exempted Undertakings Tax Protection Act 1966, that if any legislation is enacted in Bermuda that would impose tax computed on profits or income, or computed on any capital asset, gain or appreciation, or any tax in the nature of estate, duty or inheritance tax, then the imposition of any such tax will not be applicable to us or to any of our operations or our shares, debentures or other obligations until March 28, 2016. Given the limited duration of the Minister of Finance's assurance, we cannot be certain that we will not be subject to any Bermuda tax after March 28, 2016. In the event that we become subject to any Bermuda tax after such date, it could have a material adverse effect on our results of operations and financial condition.

Changes in tax laws or tax treaties may cause more of the income of certain non-U.S. companies in our group to become subject to taxes in the United States.

The taxable income of our U.S. subsidiaries is subject to U.S. federal, state and local income tax and other taxes. The income of the non-U.S. companies in our group is generally subject to a lower effective tax rate than that imposed by the United States. Certain of our non-U.S. companies are eligible for the benefits of tax treaties between the United States and other countries. We believe our non-U.S. companies will continue to be eligible for treaty benefits. However, it is possible that factual changes or changes to U.S. tax laws or changes to tax treaties that presently apply to our non-U.S. companies could increase income, or the tax rate on income, subject to tax in the United States. Similarly, changes to the applicable tax laws, treaties or regulations of other countries could subject the income of members of our group to higher rates of tax outside the United States. For example, legislation has been introduced to Congress to amend the Internal Revenue Code of 1986 to disallow the deduction for excess non-taxed reinsurance premiums with respect to United States risks paid to affiliates.

Table of Contents

We depend on our key personnel to manage our business effectively and they may be difficult to replace.

Our performance substantially depends on the efforts and abilities of our management team and other executive officers and key employees. Furthermore, much of our competitive advantage is based on the expertise, experience and know-how of our key management personnel. We do not have fixed term employment agreements with any of our key employees nor key man life insurance and the loss of one or more of these key employees could adversely affect our business, results of operations and financial condition. Our success also depends on the ability to hire and retain additional personnel. Difficulty in hiring or retaining personnel could adversely affect our results of operations and financial condition.

Bermuda law differs from the laws in effect in the United States and may afford less protection to shareholders.

We are organized under the laws of Bermuda, and a portion of our assets are located outside the United States. As a result, it may not be possible for our shareholders to enforce court judgments obtained in the United States against us based on the civil liability provisions of the federal or state securities laws of the United States, either in Bermuda or in countries other than the United States where we will have assets. In addition, there is some doubt as to whether the courts of Bermuda and other countries would recognize or enforce judgments of U.S. courts obtained against us or our directors or officers based on the civil liabilities provisions of the federal or state securities laws of the United States or would hear actions against us or those persons based on those laws.

Our corporate affairs are governed by the Companies Act. The Companies Act differs in some material respects from laws generally applicable to U.S. corporations and shareholders, including the provisions relating to interested directors, amalgamations, mergers and acquisitions, takeovers, shareholder lawsuits and indemnification of directors. Generally, the duties of directors and officers of a Bermuda company are owed to the company only. Shareholders of Bermuda companies generally do not have rights to take action against directors or officers of the company and may only do so in limited circumstances. Class actions and derivative actions are generally not available to shareholders under Bermuda law. The Bermuda courts, however, would ordinarily be expected to permit a shareholder to commence an action in the name of a company to remedy a wrong to the company where the act complained of is alleged to be beyond the corporate power of the company or illegal, or would result in the violation of the company's memorandum of association or bye-laws. Furthermore, consideration would be given by a Bermuda court to acts that are alleged to constitute a fraud against noncontrolling shareholders or, for instance, where an act requires the approval of a greater percentage of the company's shareholders than that which actually approved it.

When the affairs of a company are being conducted in a manner that is oppressive or prejudicial to the interests of some part of the shareholders, one or more shareholders may apply to the Supreme Court of Bermuda, which may make such order as it sees fit, including an order regulating the conduct of the company's affairs in the future or ordering the purchase of the shares of any shareholders by other shareholders or by the company. Additionally, under our bye-laws and as permitted by Bermuda law, each shareholder has waived any claim or right of action against our directors or officers for any action taken by directors or officers in the performance of their duties, except for actions involving fraud or dishonesty. In addition, the rights of our shareholders and the fiduciary responsibilities of our directors under Bermuda law are not as clearly established as under statutes or judicial precedent in existence in jurisdictions in the United States, particularly the State of Delaware. Therefore, our shareholders may have more difficulty protecting their interests than would shareholders of a corporation incorporated in a jurisdiction within the United States.

Table of Contents

Item 1B. Unresolved Staff Comments

As of the date of this report, the Company had no unresolved comments from the Commission staff regarding its periodic or current reports under the Exchange Act.

Item 2. Properties

The Company maintains two professional offices in Hamilton, Bermuda which serve as its headquarters and its registered office. The Company's principal executive office is in Hanover, New Hampshire. In addition, White Mountains maintains professional offices in Guilford, Connecticut, which house its investment and corporate finance functions, and Boston, Massachusetts, which house its corporate accounting, reporting and compliance functions.

OneBeacon Ltd.'s headquarters are located in Hamilton, Bermuda and its United States corporate headquarters and principal executive office is located in Minnetonka, Minnesota. OneBeacon also maintains branch offices in various cities throughout the United States.

White Mountains Re Ltd.'s headquarters are located in Hamilton, Bermuda and its principal executive office is located in New York, New York. WMRe America is headquartered in New York, New York with various branch offices in the United States and in Toronto, Canada. WMRe Sirius is headquartered in Stockholm, Sweden with various branch offices in Europe, Australia, Asia and Bermuda. Esurance is headquartered in San Francisco, California with various offices throughout the United States. AFI is headquartered in Encino, California with operations in Oak Ridge, Tennessee.

The Company's headquarters, registered office, principal executive office, and corporate accounting, reporting and compliance offices are leased. White Mountains owns its investment and corporate finance office in Connecticut. WMRe Sirius' home office in Sweden and substantially all of its branch offices are leased. WMRe America's home office and its branch offices are leased as well. OneBeacon owns a building in Canton, Massachusetts that houses its corporate and other shared services functions, while its principal executive office and branch offices are leased. Esurance's and AFI's home office and their branch offices are leased. Management considers its office facilities suitable and adequate for its current level of operations.

Item 3. Legal Proceedings

White Mountains, and the insurance and reinsurance industry in general, is subject to litigation and arbitration in the normal course of business. Other than those items listed below, White Mountains was not a party to any material litigation or arbitration other than as routinely encountered in claims activity, none of which is expected by management to have a material adverse effect on its financial condition and/or cash flows.

Scandinavian Re

On August 19, 2009, the arbitration panel hearing the arbitration proceeding between Scandinavian Re and St. Paul Fire & Marine Insurance Company, et. al. (St. Paul) issued a final decision. This arbitration related to a dispute over a multi-year Retrocessional Casualty Aggregate Stop Loss Agreement (Agreement) concerning certain classes of casualty reinsurance written by St. Paul during the 1999-2001 underwriting years. Scandinavian Re had argued that the Agreement should be reformed or rescinded. The final decision stated, among other things, that the Agreement is valid and enforceable and shall be applied based on the written terms of the Agreement. The decision did not have a material effect on White Mountains' financial condition.

On November 16, 2009, Scandinavian Re filed a motion to vacate the arbitration award in federal court in the Southern District of New York. On February 23, 2010, the court issued an order granting Scandinavian Re's motion to vacate the arbitration award. The matter has been remanded for arbitration in front of a new panel of arbitrators. The judge vacated all rulings made by the first panel and required St. Paul to return to Scandinavian Re any monies paid over to it since September 26, 2007 so as to put the parties back in the same position that they were as of the day that St. Paul demanded arbitration. On March 15, 2010, St. Paul filed a notice of appeal with the 2nd Circuit Court of Appeals and posted a supersedeas bond, which stays enforcement of the district court's order. The briefing and the oral argument have been completed, and the parties are awaiting the ruling of the 2nd Circuit Court of Appeals.

Table of Contents**Executive Officers of the Registrant and its Subsidiaries (As of February 28, 2011)**

Name	Position	Age	Executive officer since
Raymond Barrette	Chairman and CEO	60	2007
Reid T. Campbell	Managing Director of White Mountains Capital, Inc.	43	2007
David T. Foy	Executive Vice President and Chief Financial Officer	44	2003
T. Michael Miller	President and CEO of OneBeacon Ltd.	52	2005
J. Brian Palmer	Vice President and Chief Accounting Officer	38	2001
G. Manning Rountree	Managing Director of White Mountains Capital, Inc. and President of WM Advisors	38	2009
Robert L. Seelig	Managing Director and General Counsel	42	2002
Gary C. Tolman	President and CEO of Esurance Holdings, Inc. (EHI)	59	2005
Allan L. Waters	President and CEO of White Mountains Re Ltd.	53	2007

All executive officers of the Company and its subsidiaries are elected by the Board for a term of one year or until their successors have been elected and have duly qualified. Information with respect to the principal occupation and relevant business experience of the Executive Officers follows:

Mr. Barrette has served as Chairman and CEO of the Company since January 2007. He served as a director of the Company from 2000 to 2005 and was re-appointed as a director in August 2006. He previously served as President and CEO of the Company from 2003 to 2005, as CEO of OneBeacon from 2001 to 2002, as President of the Company from 2000 to 2001 and as Executive Vice President and Chief Financial Officer of the Company from 1997 to 2000. Mr. Barrette also serves as a director of OneBeacon Ltd.

Mr. Campbell has served as a Managing Director of White Mountains Capital, Inc. since January 2004. He joined White Mountains in 1994 and has served in a variety of financial management positions with White Mountains. Prior to joining White Mountains, Mr. Campbell spent three years with KPMG LLP. Mr. Campbell also serves as a director of OneBeacon Ltd.

Mr. Foy was appointed Executive Vice President and Chief Financial Officer of the Company in April 2003. Prior to joining White Mountains in 2003, Mr. Foy served as Senior Vice President and Chief Financial Officer of Hartford Life Inc. and joined that company in 1993. Prior to joining Hartford Life, Mr. Foy was with Milliman and Robertson, an actuarial consulting firm. Mr. Foy also serves as a director of OneBeacon Ltd. and Symetra.

Mr. Miller was appointed President and CEO of OneBeacon in July 2005 and joined OneBeacon as its Chief Operating Officer in April 2005. Mr. Miller also serves as a director of OneBeacon Ltd. Prior to joining White Mountains, Mr. Miller spent 10 years at St. Paul Travelers, most recently as Co-Chief Operating Officer. Prior to joining St. Paul Travelers, Mr. Miller spent 14 years with The Chubb Corporation.

Mr. Palmer has served as Chief Accounting Officer since 2001 and previously served as Controller of a subsidiary of White Mountains from 1999 to 2001. Prior to joining White Mountains in 1999, Mr. Palmer was with PricewaterhouseCoopers LLP.

Mr. Rountree is a Managing Director of White Mountains Capital, Inc. and President of WM Advisors. He joined White Mountains in 2004. Prior to joining White Mountains, Mr. Rountree worked with both Putnam Investments and McKinsey & Company.

Mr. Seelig is Managing Director and General Counsel of the Company. Prior to joining White Mountains in September 2002, Mr. Seelig was with the law firm of Cravath, Swaine & Moore.

Mr. Tolman has served as President and CEO of EHI since 2000. Prior to joining EHI, Mr. Tolman was with Talegen Holdings for six years, serving most recently as its President. Prior to joining Talegen, Mr. Tolman was with Fireman's Fund Corporation for more than 15 years.

Mr. Waters was appointed President and CEO of White Mountains Re Ltd. in March 2007. Mr. Waters served as a director of White Mountains from 2003 to 2004 and was re-elected as a director in November 2005. From 1998 to 2007, Mr. Waters was the founder and Managing Member of Mulherrin Capital Advisors, LLC. Mr. Waters formerly served as Senior Vice President and Chief Financial Officer of White Mountains from 1993 to 1998, and originally joined the Company in 1985.

Table of Contents**PART II****Item 5. Market for the Company's Common Equity, Related Shareholder Matters and Issuer Purchases of Equity Securities**

White Mountains' common shares are listed on the New York Stock Exchange (symbol WTM) and the Bermuda Stock Exchange (symbol WTM-BH). As of February 17, 2011, there were 353 registered holders of White Mountains common shares, par value \$1.00 per share. The quarterly range of the high and low sales price for common shares during 2010 and 2009 is presented below:

Quarter ended:	2010		2009	
	High	Low	High	Low
December 31	\$ 338.65	\$ 307.29	\$ 340.00	\$ 294.82
September 30	333.88	294.91	318.32	218.80
June 30	363.37	306.01	229.90	168.04
March 31	359.18	314.17	288.35	146.10

For information on securities authorized for issuance under the Company's equity compensation plans, see **Item 12 Security Ownership of Certain Beneficial Owners and Management and Related Stockholder Matters**.

The following graph shows the five-year cumulative total return for a shareholder who invested \$100 in common shares as of January 1, 2006, assuming re-investment of dividends. Cumulative returns for the five-year period ended December 31, 2010 are also shown for the Standard & Poor's 500 Stocks (Property & Casualty) Capitalization Weighted Index (S&P P&C) and the Standard & Poor's 500 Stocks Capitalization Weighted Index (S&P 500) for comparison.

Purchases of Equity Securities by the Company

The following table provides information regarding common shares repurchased by the Company during the fourth quarter of 2010:

Months	Total Number of Shares Purchased	Average Price Paid per Share	Total Number of Shares Purchased as Part of Publicly Announced Plan (1)	Maximum Number of Shares that May Yet Be Purchased Under the Plan (1)
October 1 - 31, 2010	53,693	\$ 315.10	53,693	588,643
November 1 - 30, 2010	45,507	\$ 319.96	45,507	543,136
December 1 - 31, 2010	47,961	\$ 324.97	41,124	502,012
Total	147,161	\$ 319.82	140,324	502,012

(1) On November 17, 2006, White Mountains board of directors authorized the Company to repurchase up to 1 million of its common shares, from time to time, subject to market conditions. On August 26, 2010, White Mountains board of directors authorized the Company to repurchase up to an additional 600,000 common shares. Shares may be repurchased on the open market or through privately negotiated transactions. The repurchase authorization does not have a stated expiration. During 2010, the Company repurchased 677,125 common shares for \$220 million. Since the inception of the program through December 31, 2010, the Company has repurchased 1,097,736 common shares for \$423 million.

Table of Contents**Item 6. Selected Financial Data**

Selected consolidated income statement data and ending balance sheet data for each of the five years ended through December 31, 2010, follows:

(a) Effective January 1, 2008, White Mountains adopted ASC 825 and elected to record the changes in unrealized gains and losses from nearly all of its investment portfolio in net income. In prior periods, these changes have been included in other comprehensive income. Accordingly, total revenues and pre-tax income (loss) for periods prior to 2008 are not directly comparable to such measures for all other periods presented above.

(b) In connection with the OneBeacon Offering in 2006, White Mountains recognized a \$171 gain in other revenues and recorded \$479 in noncontrolling interest.

(c) The extraordinary gain in 2008 resulted from the excess of the fair value over the cost of net assets acquired in the Helicon acquisition. The extraordinary gain in 2006 resulted from the excess of the fair value over the cost of net assets acquired in the Mutual Services acquisition.

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

- (d) During 2010, OneBeacon repurchased \$187 face value of the OBH Senior Notes. At December 31, 2008, White Mountains had \$200 outstanding under its credit facility, which was repaid during 2009. During 2007, White Mountains Re issued the \$400 WMRe Senior Notes, a portion of the proceeds of which were used to repay the borrowings under White Mountains credit facility. At December 31, 2006, White Mountains had \$320 outstanding under its credit facility.
- (e) In May 2007, WMRe Group, issued \$250 non-cumulative perpetual preference shares.
- (f) Includes the dilutive effects of outstanding incentive options to acquire common shares (Options). Non-qualified options were not included in the diluted earnings per share denominator as their inclusion would be anti-dilutive for the periods presented.
- (g) Adjusted book value per share is a non-GAAP measure which is derived by expanding the GAAP book value per share calculation to include the effects of assumed conversion of all in-the-money convertible securities and to exclude the net unrealized gains (losses) from Symetra s fixed maturity portfolio. See the reconciliation of adjusted book value per share to book value per share on page 45.
- (h) During 2008, Berkshire exchanged 1,634,921 of the Company s common shares for a combination of cash and assets. During 2010, 2008 and 2007, the Company repurchased and retired 677,125, 129,770 and 290,841 common shares, respectively, under its share repurchase program.
- (i) Includes outstanding Options to acquire common shares, when applicable. In addition, for periods subsequent to December 31, 2006, the number of common shares outstanding used in the calculation of adjusted book value per share is adjusted to exclude unearned shares of restricted stock, the compensation of which, at the date of calculation, has yet to be amortized.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations

*The following discussion contains forward-looking statements. White Mountains intends statements that are not historical in nature, which are hereby identified as forward-looking statements, to be covered by the safe harbor provisions of the Private Securities Litigation Reform Act of 1995. White Mountains cannot promise that its expectations in such forward-looking statements will turn out to be correct. White Mountains actual results could be materially different from and worse than its expectations. See **FORWARD-LOOKING STATEMENTS** for specific important factors that could cause actual results to differ materially from those contained in forward-looking statements.*

The following discussion also includes five non-GAAP financial measures, adjusted comprehensive income, adjusted book value per share, adjusted capital, and Esurance's adjusted expense ratio and adjusted combined ratio, that have been reconciled to their most comparable GAAP financial measures (see page 68). White Mountains believes these measures to be more relevant than comparable GAAP measures in evaluating White Mountains' financial performance and condition.

RESULTS OF OPERATIONS FOR THE YEARS ENDED DECEMBER 31, 2010, 2009 and 2008

Overview Year Ended December 31, 2010 versus Year Ended December 31, 2009

White Mountains ended 2010 with an adjusted book value per share of \$441, an increase of 6%, including dividends, from December 31, 2009. White Mountains reported adjusted comprehensive income of \$141 million in 2010 compared to adjusted comprehensive income of \$560 million in 2009. The increase in adjusted book value per share in 2010 was driven by decent investment and underwriting results and share repurchases, offset somewhat by losses at WM Life Re from reduced surrender assumptions. White Mountains' investment return was 5.0% in 2010, an acceptable result given the conservative positioning of the portfolio. Underwriting results for 2010 were solid but worse than 2009, as OneBeacon's underwriting results were adversely impacted by losses in businesses it recently exited, while White Mountains Re was adversely impacted by large catastrophe losses, principally from the Chile earthquake in February 2010. Share repurchases increased adjusted book value per share by \$7 in 2010.

OneBeacon ended 2010 with a book value per share of \$13.02, an increase of 9%, including dividends, from December 31, 2009. OneBeacon's total GAAP combined ratio was 101% for 2010 compared to 94% for 2009, while its specialty insurance combined ratio was 94% for 2010 compared to 83% in 2009. The increase in OneBeacon's total GAAP combined ratio was primarily due to large loss activity and catastrophe losses experienced earlier in the year, particularly in recently exited personal lines and non-specialty commercial lines. OneBeacon's 2010 specialty insurance combined ratio also had 6 fewer points of favorable reserve development than in 2009. White Mountains Re reported a GAAP combined ratio of 94% in 2010 compared to 80% in 2009. This increase was principally due to increased catastrophe losses in 2010, which were 16 points higher than in 2009. Esurance reported an adjusted combined ratio of 103% in both 2010 and 2009. Esurance's results for 2010 were negatively impacted by poor results in Florida, offset by improved results in other states and higher favorable reserve development.

Total net written premiums decreased 16% to \$2,938 million in 2010 from \$3,492 million in 2009, primarily due to lower net written premiums at OneBeacon, partially offset by increases at White Mountains Re and Esurance. OneBeacon's net written premiums decreased 35% to \$1,236 million in 2010, reflecting the Commercial Lines Transaction beginning with January 1, 2010 renewals and the Personal Lines Transaction in July 2010. OneBeacon's specialty insurance premiums increased 4% in 2010 to \$988 million. White Mountains Re's net written premiums

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

increased 7% in 2010 to \$866 million, due mainly to increases in the trade credit and accident & health lines and the effects of foreign currency translation. Esurance's net written premiums increased 7% in 2010 to \$836 million, mainly due to improved policyholder conversion and retention.

Overview Year Ended December 31, 2009 versus Year Ended December 31, 2008

White Mountains ended 2009 with an adjusted book value per share of \$417, an increase of 18%, including dividends, from December 31, 2008. White Mountains reported adjusted comprehensive income of \$560 million in 2009 compared to adjusted comprehensive loss of \$749 million in 2008. The 2009 results were driven primarily by strong investment results, foreign currency gains, improved underwriting results and favorable weather, as compared to the 2008 results, which experienced significant investment and foreign currency losses.

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

Table of Contents

OneBeacon ended 2009 with a book value per share of \$15.03, an increase of 31%, including dividends, from December 31, 2008. OneBeacon's 2009 results include pre-tax proceeds of \$23 million, reflected in other revenues, from the Commercial Lines Transaction that was completed during the fourth quarter. OneBeacon reported a GAAP combined ratio of 94% for 2009 compared to 95% for 2008. The decrease in OneBeacon's combined ratio was primarily due to lower catastrophe losses and slightly higher favorable loss reserve development, somewhat offset by higher expenses in 2009, including increased incentive compensation costs and severance and other costs associated with the Commercial Lines Transaction. White Mountains Re reported a GAAP combined ratio of 80% in 2009 compared to 106% in 2008. This decrease was principally due to lower catastrophe losses, 3 points of favorable loss reserve development in 2009 compared to 8 points of unfavorable loss reserve development in 2008 and improved accident year results. Esurance reported an adjusted combined ratio of 103% in 2009 compared to 105% in 2008. This decrease was mostly due to improvements in the loss and LAE ratio, which was 74% in 2009 compared to 77% for 2008. Results were affected by lower frequencies in the first half of the year, partially offset by higher frequencies in the second half due to weather-related losses and increased driving. White Mountains' investment portfolio produced a total return of 9.4% in 2009, driven by an 18% return on its corporate bond portfolio.

Total net written premiums decreased 6% to \$3,492 million in 2009 from \$3,718 million in 2008, as all three of White Mountains' segments experienced lower written premiums in 2009. OneBeacon's net written premiums decreased 3% to \$1,907 million in 2009, as a 13% increase in specialty lines was more than offset by an 18% decrease in personal lines and an 11% decrease in non-specialty commercial lines business, which was subject to the Commercial Lines Transaction. White Mountains Re's net written premiums decreased 13% to \$807 million in 2009 from \$931 million in 2008, due mainly to reductions in U.S. casualty writings, reductions in property catastrophe excess writings, additional reinsurance purchased on the credit line of business, and the effects of foreign currency translation. Esurance's net written premiums decreased 5% in 2009 to \$779 million, compared to \$823 million in 2008, mainly due to the impact of selective rate adjustments. Despite the decreased premiums at Esurance, new policy sales increased 6% in 2009 compared to 2008. Most of the increase in new policy sales occurred in the second half of the year, as Esurance converted more shoppers into customers.

Adjusted Book Value Per Share

The following table presents White Mountains' adjusted book value per share, a non-GAAP financial measure, for the years ended December 31, 2010, 2009 and 2008 and reconciles this non-GAAP measure to the most comparable GAAP measure (See **NON-GAAP FINANCIAL MEASURES** on page 68):

	2010	December 31, 2009	2008
Book value per share numerators (in millions):			
White Mountains' common shareholders' equity	\$ 3,653.0	\$ 3,657.4	\$ 2,898.8
Benefits to be received from share obligations under employee benefit plans(1)		.4	1.1
Book value per share numerator	3,653.0	3,657.8	2,899.9
Equity in net unrealized (gains) losses from Symetra's fixed maturity portfolio	(58.5)	9.0	197.3
Adjusted book value per share numerator	\$ 3,594.5	\$ 3,666.8	\$ 3,097.2
Book value per share denominators (in thousands of shares):			
Common shares outstanding	8,194.9	8,860.2	8,808.8
Share obligations under employee benefit plans(1)		2.4	6.0
Book value per share denominator	8,194.9	8,862.6	8,814.8
Unearned restricted shares	(36.5)	(59.1)	(42.6)
Adjusted book value per share denominator	8,158.4	8,803.5	8,772.2
Book value per share	\$ 445.76	\$ 412.73	\$ 328.97
Adjusted book value per share	\$ 440.59	\$ 416.52	\$ 353.07

(1) Assumes conversion of in-the-money stock options

Table of Contents**Review of Consolidated Results**

A summary of White Mountains' consolidated financial results for the years ended December 31, 2010, 2009 and 2008 follows:

Millions	Year Ended December 31,		
	2010	2009	2008
Gross written premiums	\$ 3,554.3	\$ 3,897.6	\$ 4,116.5
Net written premiums	\$ 2,937.7	\$ 3,492.0	\$ 3,717.6
Revenues

Comprehensive income (loss) attributable to White Mountains' common shareholders	214.4	750.8	(940.8)
Change in net unrealized (gains) losses from Symetra's fixed maturity portfolio	(73.5)	(191.3)	191.7
Adjusted comprehensive income (loss)	\$ 140.9	\$ 559.5	\$ (749.1)

Consolidated Results - Year Ended December 31, 2010 versus Year Ended December 31, 2009

White Mountains' total revenues decreased 19% to \$3,571 million in 2010 compared to \$4,427 million in 2009, primarily due to lower net investment gains and lower earned premiums due to the Commercial and Personal Lines Transactions. White Mountains reported net realized and unrealized investment gains of \$96 million in 2010 compared to \$385 million in 2009. Earned premiums decreased 12% in 2010 compared to 2009 as decreases at OneBeacon and White Mountains Re were partially offset by an increase at Esurance. Net investment income was down 16% to \$229 million in 2010, due primarily to lower fixed maturity yields and a reduction in invested assets from the Personal Lines

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

Transaction, including a shift to lower yielding short-term investments during the first six months of 2010 in preparation for the sale, the OBH Senior Notes repurchases at OneBeacon and share repurchases. Other revenues decreased to \$84 million in 2010 from \$169 million in 2009, primarily due to a \$44 million decrease in foreign currency translation gains at White Mountains Re and a \$39 million decrease related to the deconsolidation of Tuckerman Fund II effective January 1, 2010, partially offset by a \$13 million gain from White Mountains Re's acquisition of Central National. Other revenues included \$23 million of foreign currency translation gains at White Mountains Re in 2010 compared to \$67 million in 2009.

Table of Contents

White Mountains' total expenses decreased 7% to \$3,421 million in 2010 compared to \$3,663 million in 2009. Losses and LAE expenses decreased \$51 million, or 2%, as decreases from the Commercial and Personal Lines Transactions were partially offset by a \$170 million increase in catastrophe losses. Other underwriting expenses decreased \$85 million, or 17%, due primarily to the Commercial and Personal Lines Transactions. General and administrative expenses decreased 17% to \$183 million in 2010 compared to \$220 million in 2009, primarily due to a \$38 million decrease related to the deconsolidation of Tuckerman Fund II effective January 1, 2010. Interest expense on debt decreased 19% to \$57 million in 2010 compared to \$71 million in 2009, primarily due to reductions of outstanding debt resulting from repurchases of OBH Senior Notes and the full repayment of the Sierra Note and the Atlantic Specialty Note.

Consolidated Results Year Ended December 31, 2009 versus Year Ended December 31, 2008

White Mountains' total revenues increased 50% to \$4,427 million in 2009 compared to \$2,945 million in 2008, primarily due to significant net unrealized and realized investment gains and foreign currency gains in other revenues in 2009 compared to significant losses from these sources in 2008. White Mountains reported net realized and unrealized investment gains of \$385 million in 2009 compared to \$1,107 million of net realized and unrealized investment losses in 2008. Earned premiums decreased 3% in 2009 compared to 2008, as all three of White Mountains segments experienced lower earned premiums. Net investment income decreased 34% to \$272 million in 2009 compared to \$410 million in 2008, due to lower overall portfolio yields, shifts in portfolio mix to lower risk, lower yield investments and a decrease in the overall invested asset base. Other revenues increased by \$237 million to \$169 million in 2009, due mainly to the net effect of the change in the fair value of WM Life Re's variable annuity liabilities and the fair value of the related derivative contracts, which reduced other revenues by \$81 million in 2009 compared to \$194 million in 2008. Other revenues also included \$67 million of foreign currency translation gains at White Mountains Re in 2009 compared to \$59 million of foreign currency translation losses reported in 2008, as well as an \$11 million gain from an increase in the value of White Mountains' investment in Symetra warrants during 2009 compared to a decrease of \$50 million in 2008, which was due to a significant decline in public equity valuations in the life insurance sector.

White Mountains' total expenses decreased 10% to \$3,663 million in 2009 compared to \$4,084 million in 2008. Losses and LAE expenses decreased \$387 million, or 15%, due primarily to \$122 million of net favorable loss reserve development in 2009 compared to \$21 million of net adverse loss reserve development in 2008 and to lower catastrophe losses at White Mountains Re, which reported \$57 million of catastrophe losses in 2009 compared to \$156 million in 2008. General and administrative expenses increased to \$220 million in 2009 from \$217 million in 2008 as an increase in incentive compensation expenses was partially offset by a decrease in expenses from consolidated limited partnerships. Interest expense on debt decreased 14% to \$71 million in 2009 compared to \$82 million in 2008, primarily due to reductions of outstanding debt resulting from the full repayment of the WTM Bank Facility and the Mortgage Note at OneBeacon and repurchases of OBH Senior Notes.

Income Taxes

The Company and its Bermuda domiciled subsidiaries are not subject to Bermuda income tax under current Bermuda law. In the event there is a change in the current law such that taxes are imposed, the Company and its Bermuda domiciled subsidiaries would be exempt from such tax until March 28, 2016, pursuant to the Bermuda Exempted Undertakings Tax Protection Act of 1966. The Company has subsidiaries and branches that operate in various other jurisdictions around the world that are subject to tax in the jurisdictions in which they operate. The jurisdictions in which the Company's subsidiaries and branches are subject to tax are Australia, Belgium, Canada, Germany, Gibraltar, Luxembourg, the Netherlands, Singapore, Sweden, Switzerland, the United Kingdom and the United States.

The income tax expense (benefit) related to pre-tax income (loss) for 2010, 2009 and 2008 represented an effective tax rate of 13.9%, 27.3% and (43.8)%, respectively. White Mountains' effective tax rates for 2010 and 2009 were lower than the U.S. statutory rate of 35% due primarily to

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

income generated in jurisdictions other than the United States. White Mountains' effective tax rate for 2008 generated a higher benefit than the U.S. statutory tax rate of 35% due primarily to a \$162 million tax benefit from the release of a valuation allowance against a deferred tax asset in a Luxembourg-domiciled, wholly owned subsidiary, White Mountains International S.à r.l. (WMI). WMI had built up substantial net operating loss carryforwards (NOLs) that had a full valuation allowance in periods prior to the fourth quarter of 2008 because there was no expected future taxable income at WMI to utilize them. The loss carryforwards at WMI primarily relate to tax deductible write-downs in 2007 and 2008 of investments in U.S. subsidiaries held by WMI.

White Mountains Re partially finances its operations with internal debt instruments. During the fourth quarter of 2008, Sweden enacted tax legislation that limits the deductibility of interest paid to a noteholder in a low tax jurisdiction. Due to uncertainty regarding the application of the new legislation, the deductibility of interest expense on a series of internal debt instruments issued by SIHAB (the SIHAB Notes) became at risk. The SIHAB Notes, which were previously held in a company with a low effective tax rate, were transferred to WMI, which, absent the benefit of the deferred tax asset, has an effective tax rate of 28.8%, in order to preserve the economic value of the internal capital structure by maintaining the deductibility of the interest on the SIHAB Notes in Sweden. Because the restructuring created a stream of expected future taxable income to WMI, White Mountains Re was required to release the valuation allowance. WMI is expected to fully utilize the NOLs at WMI by 2029.

Table of Contents**I. Summary of Operations By Segment**

White Mountains conducts its operations through four segments: (1) OneBeacon, (2) White Mountains Re, (3) Esurance and (4) Other Operations. While investment results are included in these segments, because White Mountains manages the majority of its investments through its wholly-owned subsidiary, WM Advisors, a discussion of White Mountains' consolidated investment operations is included after the discussion of operations by segment. White Mountains' segment information is presented in **Note 15 Segment Information** to the Consolidated Financial Statements.

OneBeacon

Financial results for OneBeacon for the years ended December 31, 2010, 2009 and 2008 follow:

Millions	Year Ended December 31,		
	2010	2009	2008
Gross written premiums	\$ 1,636.5	\$ 2,119.9	\$ 2,214.0
Net written premiums	\$ 1,236.3	\$ 1,906.7	\$ 1,963.1
Earned insurance and reinsurance premiums	\$ 1,487.7	\$ 1,959.5	\$ 1,879.0

Pre-tax income (loss)	\$ 128.5	\$ 456.9	\$ (600.6)

The following table presents OneBeacon's book value per share.

(Millions, except per share amounts)	2010	December 31, 2009	2008
OneBeacon book value per share numerators:			
OneBeacon common shareholders' equity	\$ 1,229.0	\$ 1,429.0	\$ 1,155.1
OneBeacon Ltd. common shares outstanding	94.4	95.1	95.1
OneBeacon book value per common share	\$ 13.02	\$ 15.03	\$ 12.15
Change in adjusted book value per common share, including dividends, for the year(1)	8.8%	30.6%	(21.5)%
	9.4%	31.4%	(23.9)%

Growth in adjusted book value per common share, on an IRR basis, for the year(1)

(1) OneBeacon Ltd. has paid quarterly dividends of \$0.21 per common share beginning in March 2007 and paid special dividends of \$2.50 and \$2.03 per common share in September 2010 and March 2008. The internal rate of return (IRR) basis is calculated using the actual dividend payment dates.

In the past year, OneBeacon completed two transactions (the Commercial Lines Transaction and the Personal Lines Transaction) that transformed it to a specialty insurance company. See **Note 2 Significant Transactions** to the Consolidated Financial Statements for a full description of these transactions. The transactions freed up significant capital, increased OneBeacon's financial flexibility and substantially reduced its catastrophe exposure.

Table of Contents

The following tables provide OneBeacon's GAAP ratios, net written premiums and earned insurance premiums for the years ended December 31, 2010, 2009, and 2008:

(\$ in millions)	Year Ended December 31, 2010		
	Specialty	Other (1)	Total
<i>GAAP Ratios:</i>			
Loss and LAE	55%	77%	63%

(1) Other is primarily businesses that are now in run-off or have been sold as a result of the Commercial Lines Transaction and the Personal Lines Transaction.

OneBeacon Results Year Ended December 31, 2010 versus Year Ended December 31, 2009

OneBeacon ended 2010 with a book value per share of \$13.02, an increase of 9%, including dividends, from December 31, 2009. OneBeacon reported a GAAP combined ratio of 101% for 2010 compared to 94% for 2009. The increase in OneBeacon's combined ratio was primarily due to higher catastrophe losses and higher-than-average levels of large losses experienced early in the year, particularly in businesses OneBeacon later exited through the Commercial Lines Transaction and the Personal Lines Transaction. Catastrophe losses added 4 points to OneBeacon's combined ratio in 2010 compared to 1 point in 2009.

OneBeacon's specialty insurance combined ratio for 2010 increased to 94% from 83% for 2009, as the loss and LAE ratio increased 11 points to 55%, while the expense ratio was flat at 39%. The loss and LAE ratio for 2010 included 3 points of favorable loss reserve development primarily

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

related to professional liability, as compared to 9 points of favorable loss reserve development for 2009, also primarily related to professional liability. The loss and LAE ratio for 2010 also included the impact of a higher number of large losses experienced in the property and inland marine, financial services and the OneBeacon Entertainment businesses than in 2009. The loss and LAE ratio included 2 points of catastrophe losses primarily related to severe wind and rainstorms in the northeastern United States experienced in the first quarter and elsewhere in the United States in the second quarter.

OneBeacon's other insurance combined ratio for 2010 increased to 114% from 104% for 2009, as the loss and LAE ratio increased 8 points to 77%, while the expense ratio increased 2 points to 37%. The loss and LAE ratio for 2010 included 7 points of catastrophe losses, primarily related to severe wind and rainstorms in the northeastern United States experienced in the first quarter, compared to 1 point of catastrophe losses in 2009. In addition, current accident year losses for 2010 were 7 points higher than 2009 primarily due to higher-than-average levels of large losses in the non-specialty commercial businesses. The increase in the loss and LAE ratio was partially offset by 5 points of favorable loss reserve development in 2010 primarily related to multiple peril liability and other general liability lines, compared with less than 1 point of adverse loss reserve development in 2009. The 2 point increase in the other insurance expense ratio in 2010 is primarily due to expenses that have not decreased proportionately with the reduction in earned premiums.

OneBeacon's net written premiums decreased 35% to \$1,236 million in 2010 and earned premiums decreased 24% in 2010 to \$1,488 million, reflecting decreases from the Commercial Lines Transaction and the Personal Lines Transaction. OneBeacon's specialty insurance net written premiums increased 4% in 2010 to \$988 million.

Table of Contents

OneBeacon's other revenues in 2010 included a \$9 million net gain on the Personal Lines Transaction and \$10 million of additional consideration related to the Commercial Lines Transaction, partially offset by an \$11 million loss related to the repurchase of a portion of the OBH Senior Notes. Other revenues in 2009 included pre-tax proceeds of \$23 million from the Commercial Lines Transaction and a \$5 million gain related to the purchase of a portion of the OBH Senior Notes, partially offset by a \$7 million realized loss related to the settlement of the interest rate swap.

Policy acquisition expenses decreased 18% to \$321 million and other underwriting expenses decreased 25% to \$247 million in 2010, reflecting the Commercial Lines Transaction and the Personal Lines Transaction. Interest expense decreased 25% to \$30 million in 2010, reflective of actions taken to reduce outstanding debt. General and administrative expenses were flat compared to the prior year.

Reinsurance protection. OneBeacon purchases reinsurance in order to minimize loss from large risks or catastrophic events. OneBeacon also purchases individual property reinsurance coverage for certain risks to reduce large loss volatility through property-per-risk excess of loss reinsurance programs and individual risk facultative reinsurance. OneBeacon also maintains excess of loss casualty reinsurance programs that provide protection for individual risk or catastrophe losses involving workers compensation, general liability, automobile liability, professional liability or umbrella liability. In addition, OneBeacon has a reinsurance cover with NICO, which entitles OneBeacon to recover up to \$2.5 billion in ultimate loss and LAE incurred related primarily to claims arising from business written by OneBeacon prior to 1992 for asbestos claims and prior to 1987 for environmental claims, and certain other exposures. See pages 7 and F-29 for a full description of OneBeacon's reinsurance protections. The availability and cost of reinsurance protection is subject to market conditions, which are outside of management's control. Limiting risk of loss through reinsurance arrangements serves to mitigate the impact of large losses; however, the cost of this protection in an individual period may exceed the benefit.

OneBeacon's net combined ratio for 2010 was higher than its gross combined ratio by 6 points, primarily due to the cost of catastrophe reinsurance and the business fronted under the Commercial Lines Transaction. OneBeacon's net combined ratio for 2009 was higher than its gross combined ratio by 5 points, primarily due to the cost of catastrophe, property and facultative reinsurance.

OneBeacon Results Year Ended December 31, 2009 versus Year Ended December 31, 2008

OneBeacon ended 2009 with a book value per share of \$15.03, an increase of 31%, including dividends, from December 31, 2008. OneBeacon's 2009 results included pre-tax proceeds of \$23 million, reflected in other revenues, from the Commercial Lines Transaction that was completed during the fourth quarter. OneBeacon reported a GAAP combined ratio of 94% for 2009 compared to 95% for 2008. The decrease in OneBeacon's combined ratio was primarily due to lower catastrophe losses and slightly higher favorable loss reserve development, somewhat offset by higher expenses in 2009, including increased incentive compensation costs and severance and other costs associated with the Commercial Lines Transaction.

OneBeacon's specialty insurance combined ratio for 2009 decreased to 83% from 84% for 2008, as the loss and LAE ratio decreased 4 points to 44% while the expense ratio increased 3 points to 39%. The decrease in the loss and LAE ratio was mainly due to the impact of large losses at IMU reported in 2008. Both 2009 and 2008 included 9 points of favorable loss reserve development, primarily related to lower than expected severity in professional liability. The 3 point increase in the expense ratio was mainly due to higher acquisition costs from changes in mix of business within the specialty insurance businesses and the mix of products offered within those businesses. OneBeacon's collector cars and boats business and some of its other newer specialty lines businesses have higher commission rates than its older specialty businesses.

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

OneBeacon's other insurance combined ratio for 2009 increased to 104% from 101% for 2008. The loss and LAE ratio increased 1 point to 69%, while the expense ratio increased 2 points to 35%. The increase in the loss and LAE ratio was primarily due to higher loss ratios in automobile liability, partially offset by a 3 point decrease in catastrophe losses. The 2009 loss and LAE ratio included 1 point of catastrophe losses, compared with 3 points for 2008, primarily related to hurricane Ike and from tornados in the southeastern United States in the first quarter of 2008. The 2 point increase in the expense ratio was primarily due to higher incentive compensation costs, severance and other costs associated with the Commercial Lines Transaction,

OneBeacon's net written premiums decreased 3% to \$1,907 million in 2009, as a 13% increase in specialty lines was more than offset by an 18% decrease in personal lines and an 11% decrease in non-specialty commercial lines business, which was subject to the Commercial Lines Transaction.

OneBeacon's other revenues in 2009 included pre-tax proceeds of \$23 million from the Commercial Lines Transaction and a \$5 million gain related to the purchase of a portion of the OBH Senior Notes, partially offset by a \$7 million realized loss related to the settlement of the interest rate swap. Other revenues in 2008 included \$2 million in gains from the sale of two shell companies.

Policy acquisition expenses increased 8% to \$390 million in 2009 mainly due to higher acquisition costs associated with OneBeacon's newer specialty businesses and changes in mix of business. Other underwriting expenses increased 13% to \$330 million in 2009, as 2008 included lower incentive compensation costs resulting from changes in assumptions in long-term incentive compensation plans. Interest expense on debt decreased by 12%, primarily due to the interest expense related to the Mortgage Note, which was repaid in the second quarter of 2008 and repurchases of the OBH Notes.

Table of Contents

Reinsurance protection. OneBeacon's net combined ratio for 2009 was higher than its gross combined ratio by 5 points, primarily due to the cost of catastrophe, facultative and property reinsurance. OneBeacon's net combined ratio for 2008 was higher than its gross combined ratio by 2 points, primarily due to the cost of catastrophe and facultative reinsurance, the impact of which was partially offset by ceded large losses at IMU and ceded property and casualty losses within other insurance businesses.

White Mountains Re

Financial results and GAAP combined ratios for White Mountains Re for the years ended December 31, 2010, 2009 and 2008 follows:

Millions	Year Ended December 31,		
	2010	2009	2008
Gross written premiums	\$ 1,079.1	\$ 996.5	\$ 1,076.1
Net written premiums	\$ 865.8	\$ 806.8	\$ 931.1
Earned insurance and reinsurance premiums	\$ 847.9	\$ 858.8	\$ 1,000.8
Net investment income	90.5	107.7	178.1
Net realized and unrealized investment (losses) gains	(10.9)	101.8	(284.5)
Other revenue foreign currency translation gains (losses)	22.6	66.9	(58.6)
Other revenue Tuckerman Fund II(1)(2)		38.9	28.4
Other revenue	13.3	.7	14.2
Total revenues	963.4	1,174.8	878.4

Total expenses	856.5	788.5	1,131.5
Pre-tax income (loss)	\$ 106.9	\$ 386.3	\$ (253.1)
GAAP ratios:			
Loss and LAE	63%	49%	74%
Expense	31%	31%	32%
Combined	94%	80%	106%

(1) Tuckerman Fund II was transferred from Other Operations to White Mountains Re, effective June 30, 2008. Therefore the consolidated results of Tuckerman Fund II are included in the table above after that date and are included in the Other Operations segment prior to July 1, 2008.

(2) As a result of White Mountains' adoption of the revisions to the guidance for variable interest entities under ASU 2009-17, effective January 1, 2010 White Mountains Re no longer consolidates the results of Tuckerman Fund II. See **Note 1**.

White Mountains Re Results Year Ended December 31, 2010 versus Year Ended December 31, 2009

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

White Mountains Re's GAAP combined ratio for 2010 was 94% compared to 80% for 2009. The increase in the combined ratio was principally due to an increase in catastrophe losses of 16 points, partially offset by an increase in favorable loss reserve development of 4 points. White Mountains Re recorded catastrophe losses of \$192 million in 2010, net of reinsurance and reinstatements, including \$130 million of losses from the earthquake in Chile, \$14 million of losses from the earthquake in New Zealand, \$11 million from flood losses in Europe, and \$11 million of losses from Deepwater Horizon. Catastrophe losses were \$57 million in 2009, primarily from summer windstorms in Europe and European winter storm Klaus. Favorable loss reserve development for 2010 was \$57 million and was primarily related to short-tailed lines, such as property, accident & health and marine, in recent underwriting years. Included in the \$57 million favorable loss reserve development was the recognition of \$16 million in deferred gains from a retrocessional reinsurance contract that inceptioned in 2000 and was fully collected in 2010. Favorable loss reserve development for 2009 was \$30 million and was principally due to favorable commutation activity on certain old casualty treaties, as well as \$20 million of losses ceded under a retrocessional reinsurance contract related to the 2001 accident year as further described below, partially offset by \$18 million of additional losses related to A&E exposures.

Table of Contents

White Mountains Re's gross written premiums increased 8% to \$1,079 million in 2010 from \$997 million in 2009. Net written premiums increased 7% to \$866 million in 2010 from \$807 million in 2009. These increases were primarily due to foreign currency translation (\$59 million and \$43 million of the increase, respectively) and increases in the trade credit and accident & health lines of business. The increases in net written premiums were slightly offset by the purchase of additional reinsurance in 2010, primarily on property catastrophe business. Despite the increase in net written premiums, during 2010 earned premiums declined 1% from 2009 due to changes in business mix, most notably a decrease in property catastrophe and casualty earned premiums, somewhat offset by increases in accident & health and trade credit earned premiums, which have a longer earnings recognition period.

White Mountains Re's other revenues decreased to \$36 million in 2010 from \$107 million in 2009. White Mountains Re's other revenues consisted primarily of \$23 million of foreign currency translation gains in 2010 compared to \$67 million in 2009. During 2010, White Mountains Re acquired Central National Insurance Company of Omaha and recorded a pre-tax gain of approximately \$13 million in other revenues that reflects the excess of the fair value of the net assets acquired over the consideration paid. In addition, Tuckerman Fund II is no longer consolidated (see **Note 1**). In 2009, White Mountains Re reported other revenues of \$39 million related to the consolidation of Tuckerman Fund II.

White Mountains Re's insurance and reinsurance acquisition expenses decreased 2% to \$168 million in 2010 from \$171 million in 2009. The decrease is proportional with the decrease in earned premium.

White Mountains Re's other underwriting expenses increased \$2 million in 2010, primarily due to foreign exchange and higher professional fees mainly from systems initiatives, somewhat offset by lower incentive compensation costs. General and administrative expenses decreased to \$23 million in 2010 from \$68 million in 2009 as a result of a reduction of \$38 million from the deconsolidation of Tuckerman Fund II and a reduction of \$7 million related to the reorganization of the White Mountains Re legal and operating structure incurred during the third quarter of 2009.

Reinsurance protection. White Mountains Re's reinsurance protection primarily consists of pro-rata and excess of loss protections to cover aviation, trade credit and certain property exposures. These reinsurance protections are designed to increase underwriting capacity, where appropriate, and to reduce potential loss exposure to any large event or frequency of smaller catastrophic events. In addition to its proportional reinsurance purchases for certain property exposures, in 2010 and 2009, White Mountains Re purchased group excess of loss retrocessional protection for its non-U.S. and non-Japan earthquake-related exposures. During 2010, White Mountains Re also purchased ILW contracts that covered adverse impact of the occurrence of wind and flood catastrophic events in Europe as well as a potential New Madrid earthquake event.

White Mountains Re's net combined ratio for 2010 was lower than its gross combined ratio by 6 points compared to 3 points for 2009. The decrease for 2010 was primarily due to retrocessional recoveries recognized on losses from the earthquake in Chile, including recovery of the full of \$65 million limit available under the non-U.S. earthquake cover referenced above as a result of the Chilean Earthquake. In addition, in 2010, the previously deferred gains of \$16 million from the retrocessional reinsurance contract incepting in calendar year 2000 mentioned above were recognized during the period. The decrease for 2009 was primarily due to the aforementioned cession under a retrocessional reinsurance contract related to the 2001 accident year, and recoveries on aviation losses occurring during the period.

White Mountains Re Results Year Ended December 31, 2009 versus Year Ended December 31, 2008

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

White Mountains Re's GAAP combined ratio for 2009 was 80% compared to 106% for 2008. The decrease in the combined ratio was principally due to a decrease in catastrophe losses of 9 points, 3 points of favorable loss reserve development in 2009 compared to 8 points of adverse loss reserve development in 2008, and improved accident year results. White Mountains Re recorded \$57 million of catastrophe losses in 2009, net of reinsurance and reinstatements, primarily from summer windstorms in Europe and European winter storm Klaus, compared to \$156 million in 2008, primarily from hurricane Ike and European hailstorms. Favorable loss reserve development for 2009 was \$30 million and was principally due to favorable commutation activity on certain old casualty treaties, as well as \$20 million of losses ceded under a retrocessional reinsurance contract related to the 2001 accident year, partially offset by \$18 million of additional losses related to A&E exposures. These retroceded losses were substantially offset in the combined ratio and pre-tax income by \$10 million of retroceded premiums as well as \$7 million of interest charges on funds held under the contract. White Mountains Re has now recorded the full limit of loss cessions available under this contract. Adverse loss reserve development for 2008 was \$80 million and was primarily the result of a broad review of White Mountains Re reserves during the first half of the year.

White Mountains Re's gross written premiums decreased 7% to \$997 million in 2009 from \$1,076 million in 2008. Net written premiums decreased by 13% to \$807 million in 2009 from \$931 million in 2008. These declines were due mainly to reductions in U.S. casualty writings, reductions in property catastrophe excess writings, additional cessions in the credit line of business and the effects of foreign currency translation. The reduction in U.S. casualty business is due to pricing, terms and conditions for certain accounts that do not meet White Mountains Re's underwriting guidelines, as well as higher ceding company retentions. The decrease in property catastrophe excess business reflects White Mountains Re's reduction in net peak zone property catastrophe exposures as part of its capital and risk management strategy.

Table of Contents

White Mountains Re's other revenues consisted primarily of \$67 million of foreign currency translation gains in 2009 compared to \$59 million of foreign currency translation losses in the 2008. In addition, White Mountains Re recorded \$39 million of other revenues in 2009 related to the consolidation of Tuckerman Fund II compared to \$28 million in 2008, as a result of its transfer to White Mountains Re from the Other Operations segment, effective June 30, 2008.

White Mountains Re's insurance and reinsurance acquisition expenses decreased 20% to \$171 million in 2009 from \$214 million in 2008. The decrease is due to the overall decline in premium volume discussed above in addition to increases in ceded commissions on the property and credit lines of business.

White Mountains Re's other underwriting expenses decreased by \$2 million, primarily due to lower headcount as well as the effect of foreign currency translation, partially offset by increased incentive compensation costs. General and administrative expenses increased to \$68 million in 2009 from \$41 million in the prior period, primarily due to \$12 million of higher expenses related to the consolidation of Tuckerman Fund II, in addition to \$7 million of costs relating to the reorganization of the White Mountains Re legal and operating structure in 2009.

Reinsurance protection. White Mountains Re's reinsurance protection primarily consists of pro-rata and excess of loss protections to cover aviation, trade credit and certain property exposures. These reinsurance protections are designed to increase underwriting capacity, where appropriate, and to reduce potential loss exposure to any large event or frequency of smaller catastrophe events. In addition to its proportional reinsurance purchases for certain property exposures, in 2009 and 2008, White Mountains Re purchased group excess of loss retrocessional protection for its non-U.S. and non-Japan earthquake-related exposures. During 2008, White Mountains Re also purchased two ILW contracts that covered adverse impact of the occurrence of wind and flood catastrophic events in the Northeastern United States, primarily through December 31, 2008.

For the year ended December 31, 2009, White Mountains Re's net combined ratio was lower than its gross combined ratio by 3 points, primarily due to the aforementioned cession under a retrocessional reinsurance contract related to the 2001 accident year, in addition to favorable loss reserve development on prior accident year property retrocessions. For the year ended December 31, 2008, White Mountains Re's net combined ratio was higher than its gross combined ratio by 6 points, primarily due to aforementioned \$80 million of adverse loss reserve development that was not covered by White Mountains Re's reinsurance contracts, in addition to the cost of the ILWs and other excess of loss protections.

Esurance

Esurance's financial results and GAAP combined ratios for the years ended December 31, 2010, 2009 and 2008 follows:

Millions	Year Ended December 31,		
	2010	2009	2008
Gross written premiums	\$ 838.7	\$ 781.2	\$ 826.4
Net written premiums	\$ 835.6	\$ 778.5	\$ 823.4
Earned insurance and reinsurance premiums	\$ 826.8	\$ 782.1	\$ 830.2
Net investment income	25.6	24.9	33.8

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

Net realized and unrealized investment gains (losses)	14.4	33.7	(46.1)
Other revenue - referral fee revenue	15.1	10.0	7.5
Other revenue	45.8	45.2	35.8
Total revenues	927.7	895.9	861.2
Losses and LAE	606.8	578.4	635.8
Insurance and reinsurance acquisition expenses	182.6	156.7	170.1
Other underwriting expenses	74.5	77.2	73.2
General and administrative expenses	36.0	34.7	32.1

Interest expense on debt			.5
Total expenses	912.2	864.5	927.7
Pre-tax income (loss)	\$ 15.5	\$ 31.4	\$ (66.5)
Adjusted ratios(1):			
Loss and LAE	74%	74%	77%
Adjusted expense	29%	29%	28%
Adjusted combined	103%	103%	105%

(1) Adjusted expense and combined ratios include acquisition expenses net of referral fee revenue. See **NON-GAAP FINANCIAL MEASURES** on page 68 for a reconciliation of Esurance's adjusted expense ratio and adjusted combined ratio to its GAAP expense and combined ratios.

Table of Contents

Esurance Results Year Ended December 31, 2010 versus Year Ended December 31, 2009

Esurance's adjusted combined ratio was 103% for both 2010 and 2009. Esurance's results for 2010 were negatively impacted by poor results in Florida, offset by improved results in other states and higher favorable reserve development. Esurance recorded 2 points of favorable loss and LAE reserve development in 2010 compared to 1 point of favorable loss and LAE reserve development in 2009. The adjusted expense ratio was 29% for both 2010 and 2009, as increased acquisition expenses were offset by decreased operating expenses.

Esurance's net written premiums increased 7% to \$836 million in 2010 from \$779 million in 2009. Net earned premiums increased 6% to \$827 million in 2010 from \$782 million in 2009. These increases were primarily attributable to higher policyholder conversion and retention.

Esurance's marketing expenditures increased 23% to \$96 million in 2010. Direct new policy sales increased 23% in 2010, primarily due to an increase in Esurance's online marketing programs and the launch of a new advertising campaign.

Esurance's other revenue increased 10% to \$61 million in 2010. The increase was from referral fee revenue from unaffiliated third parties participating in Esurance's comparison quotes program, which benefited from the increased traffic generated by the increase in marketing expenditures. General and administrative expenses increased by \$1 million to \$36 million in 2010, primarily due to increased expenses at AFI. The amortization of AFI's purchase accounting adjustments in 2010 was \$10 million related to the intangible asset associated with the acquired business in force and \$2 million related to their information technology infrastructure.

Esurance had 839,000 policies-in-force as of December 31, 2010, including 304,000 AFI customers (net of the Esurance Insurance Companies policies sold through AFI) and 26,000 other controlled policies (e.g., homeowners, renters and motorcycle insurance policies, which Esurance does not underwrite but places with other carriers). The Esurance Insurance Companies added approximately 65,000 policies-in-force in 2010.

Esurance Results Year Ended December 31, 2009 versus Year Ended December 31, 2008

Esurance's adjusted combined ratio decreased to 103% for 2009 from 105% for 2008. The decrease was primarily due to a 3 point improvement in the loss and LAE ratio. Loss results were affected by lower frequencies in the first half of the year partially offset by higher frequencies in the second half due to weather-related losses and increased driving. The adjusted expense ratio increased to 29% in 2009 compared to 28% in 2008, primarily due to increased advertising expenses and technology development costs.

Esurance's net written premiums decreased 5% to \$779 million in 2009 from \$823 million in 2008. Net earned premiums decreased 6% to \$782 million in 2009 from \$830 million in 2008. These decreases were attributable mainly to the impact of selective rate adjustments. Despite the decreased premiums, direct new policy sales increased 6% in 2009 compared to 2008. Most of the increase in direct new policy sales occurred in the second half of the year, as Esurance converted more shoppers into customers through website improvements and improved competitive position. Customer retention improved in 2009 compared to the previous year due to a shift toward more preferred customers, which more than offset the increase in non-pay cancellations resulting from the economic downturn. Esurance's marketing expenditures declined slightly to \$78 million in 2009 from \$80 million in 2008.

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

Esurance's other revenue increased 27% to \$55 million in 2009. The increase resulted primarily from the inclusion of a full year of commission revenue in 2009 from AFI, which Esurance acquired in the second quarter of 2008, along with an increase in the revenue from unaffiliated third parties participating in Esurance's comparison quotes program. General and administrative expenses increased by \$3 million to \$35 million in 2009, due to the inclusion of a full year of AFI's operating expenses in 2009. The amortization of AFI's purchase accounting adjustments in 2009 was \$16 million related to the intangible asset associated with the acquired business in force and \$2 million related to their information technology infrastructure.

Including approximately 294,000 AFI customers, Esurance had approximately 774,000 policies-in-force as of December 31, 2009. The Esurance Insurance Companies added approximately 29,000 policies-in-force in 2009.

Table of ContentsOther Operations

Other Operations consists of the operations of the Company, the Company's intermediate holding companies, WM Advisors, the consolidated results of the Tuckerman Fund I and Tuckerman Fund II (until its transfer to the White Mountains Re segment, effective June 30, 2008), the International American Group (until its disposition in October 2008), and White Mountains' investments in unconsolidated affiliates. The Other Operations segment also includes the results of WM Life Re, which is in run-off, and the weather risk management business until its disposition in the fourth quarter of 2009.

A summary of White Mountains' financial results from its Other Operations segment for the years ended December 31, 2010, 2009 and 2008 follows:

Millions	Year Ended December 31,		
	2010	2009	2008
Net investment income	\$ 15.8	\$ 14.3	\$ 34.0
Net realized and unrealized investment gains (losses)	17.8	.5	(12.9)
Other revenue Tuckerman Fund I and II(1)	23.3	23.4	72.8
Other revenue Symetra warrants	(1.4)	11.2	(50.0)
Other revenue	(44.0)	(50.3)	(121.4)
Total revenues	11.5	(.9)	(77.5)
Losses and LAE			(.6)
Other underwriting expenses			2.2
General and administrative expenses Tuckerman Fund I and II(1)	20.6	21.1	68.3
General and administrative expenses	90.2	83.8	60.7
Interest expense on debt	1.1	4.8	10.1
Total expenses	111.9	109.7	140.7
Pre-tax loss	\$ (100.4)	\$ (110.6)	\$ (218.2)

(1) Tuckerman Fund II was transferred from Other Operations to White Mountains Re, effective June 30, 2008. Therefore the consolidated results of Tuckerman Fund II are included in the table above through that date. The consolidated results of Tuckerman Fund I are included in all periods presented above.

Other Operations Results Year Ended December 31, 2010 versus Year Ended December 31, 2009

White Mountains' Other Operations segment's pre-tax loss was \$100 million in 2010 compared to \$111 million in 2009. The decrease in pre-tax loss was mainly due to higher investment gains in 2010, the absence of a \$7 million pre-tax loss from the weather-risk business in 2009, lower interest expense and lower compensation expenses, partially offset by a decrease in the value of the Symetra warrants (a decrease of \$1 million in 2010 compared to an increase of \$11 million in 2009) and an \$11 million loss on the disposition of Delos in 2010.

WM Life Re reported \$61 million of pre-tax loss in 2010 compared to \$57 million of pre-tax loss in 2009. During the third quarter of 2010, WM Life Re lowered the surrender assumptions used to calculate its variable annuity guarantee liability. WM Life Re's previous assumptions reflected its expectation that surrenders would rise as the surrender charges in the underlying annuities decline. However, the persistent instability in financial and foreign exchange markets has kept surrenders low. The lower surrender assumption resulted in a \$48 million increase in WM Life Re's variable annuity guarantee liability, which was recorded as a reduction of other revenues in the third quarter of 2010. The WM Life Re results for 2009 included \$22 million of losses from surrender assumption revisions made in the second quarter of 2009.

As discussed on page 86 under **FAIR VALUE MEASUREMENTS**, in determining the fair value of the benefit guarantees that WM Life Re reinsures, management makes assumptions about future policyholder surrender rates. If actual surrenders are lower than the surrender assumptions used in WM Life Re's liability valuation model, the liability for the benefit guarantees would increase. The change in surrender assumptions made by WM Life Re during the third quarter of 2010 reduced the potential impact of lower surrenders in the future. For example, a 50% reduction in the surrender assumptions used in WM Life Re's valuation model at December 31, 2010 would have increased the fair value of the liability by approximately \$12 million, compared to an increase of \$30 million based on assumptions in place at December 31, 2009.

Table of Contents**Other Operations Results Year Ended December 31, 2009 versus Year Ended December 31, 2008**

White Mountains Other Operations segment's pre-tax loss was \$111 million in 2009 compared to \$218 million in 2008. The decrease in pre-tax loss was primarily attributable to improved performance at WM Life Re and an increase in the value of White Mountains' investment in Symetra warrants, partially offset by increased incentive compensation expenses. WM Life Re reported \$57 million in pre-tax net losses in 2009 compared to \$187 million of pre-tax net losses in 2008. The pre-tax net losses from WM Life Re for 2008 resulted from the effect of volatile market conditions on WM Life Re's derivative assets and liabilities. In addition, the WM Life Re results for 2009 included \$22 million of losses from surrender assumption revisions, compared to \$93 million of such losses in 2008. The value of White Mountains' investment in Symetra warrants increased by \$11 million during 2009 compared to a decrease of \$50 million in 2008, which was due to a significant decline in the valuation of stocks in the life insurance sector. These decreases in pre-tax losses were partially offset by a \$48 million increase in incentive compensation expenses in 2009, mainly due to the reversal of outstanding performance share accruals at the end of 2008.

II. Summary of Investment Results

For purposes of discussing rates of return, all percentages are presented gross of management fees and trading expenses in order to produce a more relevant comparison to benchmark returns, while all dollar amounts are presented net of any management fees and trading expenses. A summary of White Mountains' consolidated pre-tax investment results for the years ended December 31, 2010, 2009 and 2008 follows:

Millions	Year Ended December 31,		
	2010	2009	2008
Net investment income	\$ 228.5	\$ 272.4	\$ 410.3
Net realized and unrealized investment gains (losses)	95.9	384.6	(1,107.1)
Net unrealized foreign currency gains (losses) on investments	102.9	185.1	(318.0)
Total GAAP pre-tax investment gains (losses)	\$ 427.3	\$ 842.1	\$ (1,014.8)

WMRe Sirius holds a large portfolio of investments that are denominated in U.S. dollars, but its functional currency is the Swedish kronor. When WMRe Sirius prepares its stand-alone GAAP financial statements, it translates its U.S. dollar-denominated investments to Swedish kronor and recognizes the related foreign currency translation gains or losses through income. When White Mountains consolidates WMRe Sirius, it translates WMRe Sirius' stand-alone GAAP financial statements to U.S. dollars and recognizes the foreign currency gains or losses arising from this translation, including those associated with WMRe Sirius' U.S. dollar-denominated investments, through other comprehensive income. Since White Mountains reports its financial statements in U.S. dollars, there is no net effect to adjusted book value per share or to investment returns from foreign currency translation on its U.S. dollar-denominated investments at WMRe Sirius. However, net realized and unrealized investment gains, other revenues and other comprehensive income can be significantly affected during periods of high volatility in the foreign exchange rate between the U.S. dollar and the Swedish kronor.

Gross investment returns and benchmarks returns

	Year Ended December 31,		
	2010	2009	2008
Fixed maturity investments	4.8%	12.3%	-2.9%
Short-term investments	0.1%	0.7%	1.6%

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

Total fixed maturity investments	3.8%	9.1%	-1.9%
Barclays U.S. Intermediate Aggregate Index	6.1%	6.5%	4.9%

Total consolidated portfolio	5.0%	9.4%	-9.1%

Table of Contents

Investment Returns Year Ended December 31, 2010 versus Year Ended December 31, 2009

White Mountains' GAAP pre-tax total return on invested assets was 5.0% for 2010, which includes 0.5% of foreign currency gains, compared to 9.4% for 2009, which includes 1.3% of foreign currency gains. Excluding the effects of foreign currency translation, White Mountains' fixed income portfolio returned 3.2% for 2010, lagging the Barclays U.S. Intermediate Aggregate Index return of 6.1%, primarily as a result of the shorter duration of White Mountains' fixed income portfolio. White Mountains' equity, convertible fixed maturities, and other long-term investment portfolio return of 12.6% underperformed the S&P 500 Index, as above index returns generated on assets managed by Prospector Partners were more than offset by lower returns on other equity assets. As overall financial markets have stabilized, White Mountains has gradually shifted back from a focus on capital preservation to its traditional total return investment philosophy. Additionally, White Mountains has been gradually shifting its equity exposure toward common stocks, a process it intends to continue on an opportunistic basis.

Net investment income was down 16% to \$229 million in 2010, due primarily to lower fixed maturity yields and a reduction in invested assets resulting from the Personal Lines Transaction, the OBH Senior Notes repurchases at OneBeacon and share repurchases.

Investment Returns Year Ended December 31, 2009 versus Year Ended December 31, 2008

White Mountains' pre-tax GAAP total return on invested assets was 9.4% for 2009, which includes 1.3% of foreign currency gains, compared to -9.1% for 2008, which includes 2.2% of currency losses. White Mountains' fixed maturity portfolio outperformed the Barclays U.S. Intermediate Aggregate Index by over 250 basis points in 2009, driven by an approximately 18% return on the corporate bond portfolio, into which WM Advisors added approximately \$800 million of net exposure in the first half of 2009. White Mountains' equity, convertible fixed maturities, and other long-term investment portfolio return of 11.7% underperformed the S&P 500 Index, reflecting the more conservative positioning of White Mountains' equity portfolio.

Net investment income was \$272 million in 2009, down from \$410 million in 2008, primarily due to lower overall portfolio yields, shifts in portfolio mix to lower risk, lower yield investments and a decrease in the overall invested asset base. White Mountains reported net realized and unrealized investment gains of \$385 million in 2009 compared to net realized and unrealized losses of \$1,107 million in 2008. The 2008 investment losses were mainly a result of the crisis that occurred in the financial markets during the third and fourth quarters of 2008. The weakening of the U.S. dollar also positively impacted investment returns in 2009, while the strengthened U.S. dollar had an adverse impact on the 2008 investment returns.

Portfolio composition

The following table presents the composition of White Mountains' investment portfolio as of December 31, 2010 and 2009:

\$ in millions	As of December 31, 2010		As of December 31, 2009	
	Carrying value	% of total	Carrying value	% of total

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

Fixed maturity investments	\$	6,379.9	73.1%	\$ 6,101.2	60.9%
Short-term investments		1,106.3	12.7	2,098.4	25.0
Common equity securities		710.0	8.1	458.5	6.1
Convertible fixed maturity investments		160.2	1.8	233.1	3.4
Other long-term investments		376.1	4.3	341.3	4.6
Total investments	\$	8,732.5	100.0%	\$ 9,232.5	100.0%

Table of Contents

The breakdown of White Mountains' fixed maturity and convertible fixed maturity investments at December 31, 2010 by credit class, based upon issue credit ratings provided by Standard & Poor's, or if unrated by Standard & Poor's, long term obligation ratings provided by Moody's, is as follows:

\$ in millions	As of December 31, 2010			
	Amortized cost	% of total	Carrying Value	% of total
U.S. government and government-sponsored entities(1)	\$ 2,136.4	32.9%	\$ 2,136.3	32.7%
AAA/Aaa	1,622.3	25.0	1,615.7	24.7
AA/Aa	286.3	4.5	289.3	4.4
A/A	1,026.4	15.8	1,030.6	15.8
BBB/Baa	1,145.2	17.6	1,171.6	17.9
Other/not rated	272.2	4.2	296.6	4.5
Total fixed maturity and convertible fixed maturity investments	\$ 6,488.8	100.0%	\$ 6,540.1	100.0%

(1) Includes mortgage-backed securities which carry the full faith and credit guaranty of the U.S. government (i.e., GNMA) or are guaranteed by a government sponsored entity (i.e., FNMA, FHLMC).

The weighted average duration of White Mountains' fixed maturity portfolio at December 31, 2010 was approximately 2.8 years, excluding short-term investments, and approximately 2.4 years including short-term investments. The cost or amortized cost and carrying value of White Mountains' fixed maturity and convertible fixed maturity investments at December 31, 2010 is presented below by contractual maturity. Actual maturities could differ from contractual maturities because borrowers may have the right to call or prepay certain obligations with or without call or prepayment penalties.

Millions	As of December 31, 2010	
	Amortized cost	Carrying Value
Due in one year or less	\$ 537.7	\$ 534.4
Due after one year through five years	2,399.6	2,457.7
Due after five years through ten years	876.4	875.0
Due after ten years	108.6	111.0
Mortgage-backed and asset-backed securities	2,483.4	2,472.3
Preferred stocks	83.1	89.7
Total fixed maturity and convertible fixed maturity investments	\$ 6,488.8	\$ 6,540.1

Table of Contents

LIQUIDITY AND CAPITAL RESOURCES

Operating Cash and Short-term Investments

Holding company level. The primary sources of cash for the Company and certain of its intermediate holding companies are dividends and tax sharing payments received from its insurance and reinsurance operating subsidiaries, capital raising activities, net investment income and proceeds from sales and maturities of investments. The primary uses of cash are repurchases of the Company's and OneBeacon Ltd.'s common shares, payments on and repurchases/retirements of its debt obligations, dividend payments to holders of the Company's common shares, to noncontrolling interest holders of OneBeacon Ltd.'s common shares and to holders of the WMRe Preference Shares, purchases of investments, payments made to tax authorities, contributions to operating subsidiaries and operating expenses.

Operating subsidiary level. The primary sources of cash for White Mountains' insurance and reinsurance operating subsidiaries are premium collections, net investment income, proceeds from sales and maturities of investments, contributions from holding companies and capital raising activities. The primary uses of cash are claim payments, policy acquisition costs, purchases of investments, payments on and repurchases/retirements of its debt obligations, dividend and tax sharing payments made to holding companies and operating expenses.

Both internal and external forces influence White Mountains' financial condition, results of operations and cash flows. Claim settlements, premium levels and investment returns may be impacted by changing rates of inflation and other economic conditions. In many cases, significant periods of time, ranging up to several years or more, may lapse between the occurrence of an insured loss, the reporting of the loss to White Mountains and the settlement of the liability for that loss. The exact timing of the payment of claims and benefits cannot be predicted with certainty. White Mountains' insurance and reinsurance operating subsidiaries maintain portfolios of invested assets with varying maturities and a substantial amount of short-term investments to provide adequate liquidity for the payment of claims.

Management believes that White Mountains' cash balances, cash flows from operations, routine sales and maturities of investments and the liquidity provided by the WTM Bank Facility are adequate to meet expected cash requirements for the foreseeable future on both a holding company and insurance and reinsurance operating subsidiary level.

Dividend Capacity

Under the insurance laws of the states and jurisdictions that White Mountains' insurance and reinsurance operating subsidiaries are domiciled, an insurer is restricted with respect to the timing and the amount of dividends it may pay without prior approval by regulatory authorities. Accordingly, there can be no assurance regarding the amount of such dividends that may be paid by such subsidiaries in the future. Following is a description of the dividend capacity of White Mountains' insurance and reinsurance operating subsidiaries:

OneBeacon:

Generally, OneBeacon's regulated insurance operating subsidiaries have the ability to pay dividends during any 12-month period without the prior approval of regulatory authorities in an amount set by formula based on the greater of prior year statutory net income or 10% of prior year end statutory surplus, subject to the availability of unassigned funds. OneBeacon's top tier regulated insurance operating subsidiaries have the ability to pay \$291 million of dividends during 2011 without prior approval of regulatory authorities, subject to the availability of unassigned funds. At December 31, 2010, OneBeacon's top tier regulated insurance operating subsidiaries had \$0.8 billion of unassigned funds and statutory surplus of \$1.0 billion. During 2010, OneBeacon's top tier regulated insurance operating subsidiaries distributed \$776 million to their immediate parent, including \$71 million of ordinary dividends, \$535 million of extraordinary dividends and a \$170 million return of capital.

During 2010, OneBeacon's unregulated insurance operating subsidiaries paid \$8 million of dividends to their immediate parent. At December 31, 2010, OneBeacon's unregulated insurance operating subsidiaries had \$18 million of net unrestricted cash, short-term investments and fixed maturity investments.

During 2010, OneBeacon Ltd. paid \$80 million of regular quarterly dividends and a \$236 million special dividend to its common shareholders. White Mountains received \$240 million of these dividends.

At December 31, 2010, OneBeacon Ltd. and its intermediate holding companies had approximately \$372 million of net unrestricted cash, short-term investments and fixed maturity investments outside of its regulated and unregulated insurance operating subsidiaries.

Table of Contents

White Mountains Re:

Subject to certain limitations under Swedish law, WMRe Sirius is permitted to transfer all or a portion of its pre-tax income to its Swedish parent companies to minimize taxes (referred to as a group contribution). In 2010, WMRe Sirius transferred \$68 million of its 2009 pre-tax income to its Swedish parent companies as a group contribution. In 2011, WMRe Sirius intends to transfer \$72 million (based on the December 31, 2010 SEK to USD exchange rate) of its 2010 pre-tax income to its Swedish parent companies as a group contribution.

WMRe Sirius has the ability to pay dividends subject to the availability of unrestricted statutory surplus. Historically, WMRe Sirius has allocated the majority of its pre-tax income, after group contributions to its Swedish parent companies, to the Safety Reserve (see **Safety Reserve** below). At December 31, 2010, WMRe Sirius had \$263 million (based on the December 31, 2010 SEK to USD exchange rate) of unrestricted statutory surplus, which is available for distribution in 2011. During 2010, WMRe Sirius paid \$21 million of dividends to its immediate parent.

WMRe America has the ability to pay dividends during any 12-month period without the prior approval of regulatory authorities in an amount set by formula based on the lesser of net investment income, as defined by statute, or 10% of statutory surplus, in both cases as most recently reported to regulatory authorities, subject to the availability of earned surplus. Based upon December 31, 2010 statutory surplus of \$743 million, WMRe America has the ability to pay \$74 million of dividends during 2011 without prior approval of regulatory authorities, subject to the availability of earned surplus. At December 31, 2010, WMRe America had \$67 million of earned surplus. During 2010, WMRe America did not pay any dividends to its immediate parent. During 2010, WMRe America distributed \$150 million to its immediate parent in the form of a share redemption, which was approved by the appropriate regulatory authorities.

In 2009, White Mountains Re reorganized its reinsurance operations whereby the in-force business and infrastructure of WMRe Bermuda was transferred to WMRe Sirius, which established a branch office in Bermuda to maintain the group's presence in the Bermuda market. In 2010, WMRe Bermuda was contributed to WMRe Sirius and is now in run-off. In February 2010, WMRe Bermuda distributed \$36 million to its immediate parent prior to its contribution to WMRe Sirius.

During 2010, White Mountains Re distributed \$225 million to its immediate parent.

At December 31, 2010, White Mountains Re and its intermediate holding companies had \$78 million of net unrestricted cash, short-term investments and fixed maturity investments and \$16 million of other long-term investments outside of WMRe America and WMRe Sirius.

Safety Reserve

Subject to certain limitations under Swedish law, WMRe Sirius is permitted to transfer pre-tax amounts into an untaxed reserve referred to as a safety reserve. At December 31, 2010, WMRe Sirius' safety reserve amounted to \$1.4 billion. Under GAAP, an amount equal to the safety reserve, net of a related deferred tax liability established at the Swedish tax rate of 26.3%, is classified as common shareholders' equity. Generally, this deferred tax liability is only required to be paid by WMRe Sirius if it fails to maintain predetermined levels of premium writings

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

and loss reserves in future years. As a result of the indefinite deferral of these taxes, Swedish regulatory authorities do not apply any taxes to the safety reserve when calculating solvency capital under Swedish insurance regulations. Accordingly, under local statutory requirements, an amount equal to the deferred tax liability on WMRe Sirius' safety reserve (\$379 million at December 31, 2010) is included in solvency capital. Access to the safety reserve is restricted to coverage of insurance losses. Access for any other purpose requires the approval of Swedish regulatory authorities. Similar to the approach taken by Swedish regulatory authorities, most major rating agencies generally include the \$1.4 billion balance of the safety reserve, without any provision for deferred taxes, in WMRe Sirius' capital when assessing WMRe Sirius' financial strength.

Esurance:

Esurance Insurance Company has the ability to pay dividends during any 12-month period without the prior approval of regulatory authorities in an amount set by formula based on the lesser of prior years' statutory net income, excluding realized capital gains, and prior year end statutory surplus, subject to the availability of unassigned funds. Based on 2010 statutory results, Esurance Insurance Company does not have the ability to pay dividends during 2011 without prior approval of regulatory authorities. During 2010, Esurance Insurance Company did not pay any dividends to its immediate parent.

During 2010, AFI did not pay any dividends to its immediate parent. At December 31, 2010, AFI had \$3 million of net unrestricted cash, short-term investments and fixed maturity investments.

During 2010, Esurance did not pay any dividends to its immediate parent. At December 31, 2010, Esurance had \$14 million of net unrestricted cash, short-term investments and fixed maturity investments outside of Esurance Insurance Company and AFI.

Table of Contents

Other Operations:

During 2010, WM Advisors did not pay any dividends to its immediate parent. At December 31, 2010, WM Advisors had \$22 million of net unrestricted cash, short-term investments and fixed maturity investments.

As of December 31, 2010, the Company and its intermediate holding companies had \$338 million of net unrestricted cash, short-term investments and fixed maturity investments and \$119 million of common equity securities and other long-term investments included in its Other Operations segment.

Insurance Float

Insurance float is an important aspect of White Mountains' insurance operations. Insurance float represents funds that an insurance or reinsurance company holds for a limited time. In an insurance or reinsurance operation, float arises because premiums are collected before losses are paid. This interval can extend over many years. During that time, the insurer or reinsurer invests the funds. When the premiums that an insurer or reinsurer collects do not cover the losses and expenses it eventually must pay, the result is an underwriting loss, which is considered to be the cost of insurance float. White Mountains calculates its insurance float by taking its net investment assets and subtracting its total adjusted capital. Although insurance float can be calculated using numbers determined under GAAP, insurance float is not a GAAP concept and, therefore, there is no comparable GAAP measure.

Insurance float can increase in a number of ways, including through acquisitions of insurance and reinsurance operations, organic growth in existing insurance and reinsurance operations and recognition of losses that do not cause a corresponding reduction in investment assets. Conversely, insurance float can decrease in a number of other ways, including sales of insurance and reinsurance operations, shrinking or run-off of existing insurance and reinsurance operations, the acquisition of operations that do not have substantial investment assets (e.g., an agency) and the recognition of gains that do not cause a corresponding increase in investment assets. White Mountains has historically obtained its insurance float primarily through acquisitions, as opposed to organic growth. It is White Mountains' intention to generate low-cost float over time through a combination of acquisitions and organic growth in its existing insurance and reinsurance operations. However, White Mountains will seek to increase its insurance float organically only when market conditions allow for an expectation of generating underwriting profits.

Certain operational leverage metrics can be measured with ratios that are calculated using insurance float. There are many activities that do not change the amount of insurance float at an insurance company but can have a significant impact on the company's operational leverage metrics. For example, investment gains and losses, foreign currency gains and losses, debt issuances and repurchases/repayments, common and preferred share issuances and repurchases and dividends paid to shareholders are all activities that do not change insurance float but that can meaningfully impact operational leverage metrics.

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

Table of Contents

The following table illustrates White Mountains consolidated insurance float position as of the past five year-ends:

(\$ in millions)	2010	2009	December 31, 2008	2007	2006
Total investments	\$ 8,732.5	\$ 9,232.5	\$ 9,002.7	\$ 11,649.0	\$ 11,332.7
Consolidated limited partnership investments(1)	(91.5)	(50.4)	(50.2)	(123.0)	(123.4)
Trust account assets(2)				(305.6)	(338.9)
Cash	434.8	366.0	409.6	171.3	159.0
Investments in unconsolidated affiliates	389.7	344.8	116.9	406.3	335.5
Equity in net unrealized (gains) losses from Symetra's fixed maturity portfolio	(63.7)	9.0	197.3	5.6	4.1
Accounts receivable on unsettled investment sales	40.0	27.6	78.2	201.1	8.5
Accounts payable on unsettled investment purchases	(22.4)	(9.1)	(7.5)	(46.4)	(66.8)
Interest-bearing funds held by ceding companies(3)	78.9	97.3	123.7	192.8	226.7
Interest-bearing funds held under reinsurance treaties(4)	(52.5)	(62.0)	(54.7)	(73.4)	(94.5)
Net investment assets	\$ 9,445.8	\$ 9,955.7	\$ 9,816.0	\$ 12,077.7	\$ 11,442.9
Total White Mountains common shareholders equity	\$ 3,653.0	\$ 3,657.4	\$ 2,898.8	\$ 4,713.4	\$ 4,455.3
Noncontrolling interest - OneBeacon Ltd.	295.0	351.0	283.5	517.2	490.7
Noncontrolling interest - WMRe Preference Shares	250.0	250.0	250.0	250.0	
Debt	818.8	1,050.7	1,362.0	1,192.9	1,106.7
Total capital(1)(2)	5,016.8	5,309.1	4,794.3	6,673.5	6,052.7
Equity in net unrealized (gains) losses from Symetra's fixed maturity portfolio, net of applicable taxes	(58.5)	9.0	197.3	5.6	4.1
Total adjusted capital	\$ 4,958.3	\$ 5,318.1	\$ 4,991.6	\$ 6,679.1	\$ 6,056.8
Insurance float	\$ 4,487.5	\$ 4,637.6	\$ 4,824.4	\$ 5,398.6	\$ 5,386.1
Insurance float as a multiple of total adjusted capital	0.9x	0.9x	1.0x	0.8x	0.9x
Net investment assets as a multiple of total adjusted capital	1.9x	1.9x	2.0x	1.8x	1.9x
Insurance float as a multiple of White Mountains common shareholders equity	1.2x	1.3x	1.7x	1.1x	1.2x
Net investment assets as a multiple of White Mountains common shareholders equity	2.6x	2.7x	3.4x	2.6x	2.6x

(1) The noncontrolling interest arising from White Mountains investments in consolidated limited partnerships has not been included in insurance float or total capital because White Mountains does not benefit from the return on or have the ability to utilize the net assets supporting this noncontrolling interest.

(2) Excludes preferred stock subject to mandatory redemption having an aggregate accreted liquidation preference at December 31, 2007 and 2006 of \$278 and \$269, respectively (and \$306 and \$339 of investments held in irrevocable grantor trusts for the purpose of economically defeasing the preferred stock as of these dates).

(3) Excludes funds held by ceding companies from which White Mountains does not receive interest credits.

(4) Excludes funds held by White Mountains under reinsurance treaties for which White Mountains does not provide interest credits.

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

During 2010, insurance float decreased by \$150 million, primarily due to the Personal Lines Transaction at OneBeacon, which reduced insurance float by approximately \$390 million, and favorable loss reserve development of \$126 million (see **Note 3**). These decreases were partially offset by growth in Esurance's in-force business, losses at WM Life Re and the portion of the \$250 million of catastrophe losses in 2010 that were unpaid as of December 31, 2010. These catastrophe losses create a temporary increase in insurance float when they are first recorded, which later reverses and decreases insurance float as the catastrophe losses are paid in the future.

During 2009, insurance float decreased primarily from loss reserve run-off of approximately \$250 million and favorable loss reserve development of \$122 million (see **Note 3**), partially offset by a change of \$139 million in deferred taxes on investments, as White Mountains investment portfolio recovered a large portion of investment losses from the global financial crisis in 2008, and \$57 million of losses at WM Life Re. Additionally, the large investment and foreign currency gains experienced in 2009 (see page 44) significantly decreased White Mountains operational leverage metrics.

Table of Contents

During 2008, insurance float decreased by \$574 million, primarily from loss reserve run-off of approximately \$150 million, a change of \$185 million in deferred taxes on investments that arose primarily as a result of the global financial crisis, the release of a \$162 million valuation allowance against a deferred tax asset of a subsidiary (see **Note 7**), the transfer of CCIC and International American Group as a part of the Berkshire Exchange (see page 25), which caused insurance float to decrease by approximately \$170 million, and the acquisition of AFI (see **Note 2**), which caused insurance float to decrease by approximately \$65 million. These decreases were partially offset by \$187 million in losses at WM Life Re (see page 56). Additionally, severe investment and foreign currency losses experienced during the global financial crisis (see page 47) and the Berkshire Exchange caused significant increases in White Mountains' operational leverage metrics during 2008.

Financing

The following table summarizes White Mountains' capital structure at December 31, 2010 and 2009:

(\$ in millions)	December 31,	
	2010	2009
OBH Senior Notes, carrying value	\$ 419.6	\$ 606.5
WMRe Senior Notes, carrying value	399.2	399.1
WTM Bank Facility		
Other debt(1)		45.1
Total debt	818.8	1,050.7
Noncontrolling interest - OneBeacon Ltd.	295.0	351.0
Noncontrolling interest - WMRe Preference Shares	250.0	250.0
Total White Mountains' common shareholders' equity	3,653.0	3,657.4
Total capital(2)	5,016.8	5,309.1
Equity in net unrealized (gains) losses from Symetra's fixed maturity portfolio, net of applicable taxes	(58.5)	9.0
Total adjusted capital	\$ 4,958.3	\$ 5,318.1
Total debt to total adjusted capital	17%	20%
Total debt and Preference Shares to total adjusted capital	22%	24%

(1) See **Note 6 - Debt** of the accompanying Consolidated Financial Statements for a discussion of other debt.

(2) The noncontrolling interest arising from White Mountains' investments in consolidated limited partnerships has not been included in total capital because White Mountains does not have the ability to utilize the assets supporting this noncontrolling interest.

Management believes that White Mountains generally has the flexibility and capacity to obtain funds externally as needed through debt or equity financing on both a short-term and long-term basis. However, given the recent disruptions in the capital markets, White Mountains can provide no assurance that, if needed, it would be able to obtain additional debt or equity financing on satisfactory terms, if at all.

On June 1, 2010, through a tender offer, OBH repurchased and retired \$156 million aggregate principal amount of the OBH Senior Notes for an aggregate purchase price of \$165 million.

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

Additionally, during 2010, OBH repurchased and retired \$30 million of outstanding OBH Senior Notes and OBIC purchased \$1 million of outstanding OBH Senior Notes. In addition, during the first quarter of 2010, OneBeacon repaid in full the \$14 million outstanding under the Atlantic Specialty Note.

As part of the Berkshire Exchange transaction in 2008, Berkshire indemnified White Mountains for all amounts due under the Sierra Note at its maturity, except for the portion of the interest on the Sierra Note that accrued from its issue date through December 31, 2007, plus interest on this accrued amount through the date of repayment. The Sierra Note matured on March 31, 2010. The final amount due under the note is currently in dispute with respect to the amount of loss reserve development. During 2010, the undisputed amounts owed under the Sierra Note were repaid to Sierra.

At December 31, 2009, White Mountains had a revolving credit facility with a syndicate of lenders administered by Bank of America, N.A. with a total commitment of \$417.5 million (the WTM Bank Facility) and a revolving credit facility with Barclays Bank PLC (Barclays) with a total commitment of \$33.3 million (the WTM Barclays Facility). In 2010, Barclays joined the syndicate of lenders to the WTM Bank Facility and increased its commitment to \$57.5 million, bringing the total commitment under the WTM Bank Facility to \$475.0 million. Barclays joined the WTM Bank Facility under the same terms and conditions as the other lenders. Simultaneously with the addition of Barclays to the WTM Bank Facility, White Mountains terminated the WTM Barclays Facility. As of December 31, 2010, the WTM Bank Facility was undrawn.

Table of Contents

It is possible that, in the future, one or more of the rating agencies may lower White Mountains' existing ratings. If one or more of its ratings were downgraded, White Mountains could incur higher borrowing costs on future borrowings and its ability to access the capital markets could be impacted. In addition, White Mountains' insurance and reinsurance operating subsidiaries could be adversely impacted by a downgrade in their financial strength ratings, including a possible reduction in demand for their products in certain markets.

White Mountains provides an irrevocable and unconditional guarantee as to the payment of principal and interest on the OBH Senior Notes. In consideration of this guarantee OneBeacon pays White Mountains a guarantee fee equal to 25 basis points per annum on the outstanding principal amount of the OBH Senior Notes. If White Mountains' voting interest in OneBeacon Ltd.'s common shares ceases to represent more than 50% of all their voting securities, OneBeacon Ltd. will seek to redeem, exchange or otherwise modify the senior notes in order to fully and permanently eliminate White Mountains' obligations under the guarantee. In the event that White Mountains' guarantee is not eliminated, the guarantee fee will increase over time up to a maximum guarantee fee of 425 basis points.

The OBH Senior Notes and the WMRe Senior Notes were issued under indentures that contain restrictive covenants which, among other things, limit the ability of the Company, OBH, WMRe Group and their respective subsidiaries to create liens and enter into sale and leaseback transactions and limits the ability of the Company, OBH, WMRe Group and their respective subsidiaries to consolidate, merge or transfer their properties and assets. The indentures do not contain any financial ratios or specified levels of net worth or liquidity to which the Company, OBH or WMRe Group must adhere. At December 31, 2010, White Mountains was in compliance with all of the covenants under the OBH Senior Notes and the WMRe Senior Notes, and anticipates it will continue to remain in compliance with these covenants for the foreseeable future.

The WTM Bank Facility contains various affirmative, negative and financial covenants that White Mountains considers to be customary for such borrowings, including certain minimum net worth and maximum debt to capitalization standards. Failure to meet one or more of these covenants could result in an event of default, which ultimately could eliminate availability under these facilities and result in acceleration of principal repayment on any amounts outstanding. At December 31, 2010, White Mountains was in compliance with all of the covenants under the WTM Bank Facility and anticipates it will continue to remain in compliance with these covenants for the foreseeable future.

Contractual Obligations and Commitments

Below is a schedule of White Mountains' material contractual obligations and commitments as of December 31, 2010:

Millions	Due in One Year or Less	Due in Two to Three Years	Due in Four to Five Years	Due After Five Years	Total
Loss and LAE reserves(1)	\$ 1,559.9	\$ 1,843.7	\$ 893.9	\$ 2,066.2	\$ 6,363.7
Debt		419.9		400.0	819.9
Interest on debt	50.2	88.0	51.0	38.3	227.5
Long-term incentive compensation(2)	59.4	134.3	6.5	17.0	217.2
Pension and other benefit plan obligations	13.8	8.6	9.3	40.6	72.3
Operating leases	25.5	37.0	17.7	11.7	91.9
Total contractual obligations	\$ 1,708.8	\$ 2,531.5	\$ 978.4	\$ 2,573.8	\$ 7,792.5

(1)

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

Represents expected future cash outflows resulting from loss and LAE payments. The amounts presented are gross of reinsurance recoverables on unpaid losses of \$119 and include the discount on OneBeacon's workers compensation loss and LAE reserves of \$177 as of December 31, 2010. These balances add back the remaining purchase accounting fair value adjustment of \$177 related to the acquisition of OneBeacon as it is a non-cash item.

(2) Does not include deferred compensation of \$16.4 as a distribution date has not been elected.

White Mountains' loss reserves do not have contractual maturity dates. However, based on historical payment patterns, the preceding table includes an estimate of when management expects White Mountains' loss reserves to be paid. The timing of claim payments is subject to significant uncertainty. White Mountains maintains a portfolio of marketable investments with varying maturities and a substantial amount of short-term investments to provide adequate liquidity for the payment of claims.

The WMRe Preference Shares are not included in the table above as these perpetual preferred shares have no stated maturity date and are redeemable only at the option of WMRe Group. See **Item 1 Business WHITE MOUNTAINS RE** for more details.

The balances included in the table above regarding White Mountains' long-term incentive compensation plans include amounts payable for performance shares and units, as well as deferred compensation balances. Exact amounts to be paid for performance shares cannot be predicted with certainty, as the ultimate amounts of these liabilities are based on the future performance of White Mountains and in some cases the market price of the Company's and OneBeacon Ltd.'s common shares at the time the payments are made. The estimated payments reflected in the table are based on current accrual factors (including performance relative to targets and common share price) and assume that all outstanding balances were 100% vested as of December 31, 2010.

Table of Contents

There are no provisions within White Mountains' leasing agreements that would trigger acceleration of future lease payments. White Mountains does not finance its operations through the securitization of its trade receivables, through special purpose entities or through synthetic leases. Further, except as noted in the following paragraph, White Mountains has not entered into any material arrangements requiring it to guarantee payment of third-party debt or lease payments or to fund losses of an unconsolidated special purpose entity.

Through WMRe Sirius, White Mountains has a long-term investment as a stockholder in LUC Holdings, an entity that has entered into a head lease to rent the London Underwriting Center (LUC) through 2016. LUC Holdings in turn subleases space in the LUC. In the LUC Holdings stockholders agreement, the stockholders have guaranteed any shortfall between the head lease and the sub-leases on a joint and several basis. As a consequence, in recent years the stockholders have funded an operating shortfall of LUC. At December 31, 2010, White Mountains has recorded a liability of \$5 million for its share of the expected future shortfall between LUC Holdings' head lease payments and sub-lease receipts. White Mountains does not believe that future shortfalls, if any, will have a material impact on its results of operations.

White Mountains also has future binding commitments to fund certain private equity and other long-term investments. These commitments, which total approximately \$96 million, do not have fixed funding dates and are therefore excluded from the table above.

WM Life Re reinsures death and living benefit guarantees associated with certain variable annuities issued in Japan. WM Life Re has assumed the risk related to a shortfall between the account value and the guaranteed value that must be paid by the ceding company to an annuitant or to an annuitant's beneficiary in accordance with the underlying annuity contracts. WM Life Re uses derivative instruments, including put options, interest rate swaps, total return swaps and futures contracts on major equity indices, currency pairs and government bonds, to mitigate the risks associated with changes in the fair value of the reinsured variable annuity guarantees. As of December 31, 2010 the total guarantee value was approximately ¥237 billion (approximately \$2.9 billion) and the related account values were approximately 82% of this amount. The following table represents expected future cash outflows for WM Life Re's reinsurance contracts.

Cash outflows Millions	Due in One Year or Less	Due in Two to Three Years	Due in Four to Five Years	Due After Five Years	Total
WM Life Re reinsurance contracts	\$ 4	\$ 5	\$ 14	\$ 736	\$ 759

White Mountains purchases derivative instruments, including futures and over-the counter option contracts on interest rates, major equity indices, and foreign currencies, to mitigate the risks associated with changes in the fair value of the reinsured variable annuity guarantees. At December 31, 2010, the fair value of these derivative instruments was \$348 million. In addition, WM Life Re held approximately \$326 million of cash and fixed maturity investments at December 31, 2010 posted as collateral to its reinsurance counterparties.

Share Repurchase Programs

The Company:

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

In 2006, White Mountains' board of directors authorized the Company to repurchase up to 1 million of its common shares, from time to time, subject to market conditions. On August 26, 2010, White Mountains' board of directors authorized the Company to repurchase an additional 600,000 common shares. Shares may be repurchased on the open market or through privately negotiated transactions. The repurchase authorization does not obligate The Company to acquire any specific number of shares. This program does not have a stated expiration date. Since the inception of this program through December 31, 2010, the Company repurchased 1,097,736 common shares for \$423 million. During 2011, through February 24, 2011, the Company has repurchased and retired 196,725 of its common shares under this program for \$68 million.

In addition to the shares repurchased under the share repurchase program, on October 31, 2008, White Mountains completed a transaction with Berkshire, through which Berkshire exchanged substantially all of its 16.3% stake in White Mountains (1,634,921 of its 1,724,200 common shares) for 100% of a White Mountains subsidiary which held CCIC, the International American Group and \$708 million in cash. See the **Berkshire Exchange** on page 25.

OneBeacon Ltd.:

In 2007, OneBeacon Ltd.'s board of directors authorized OneBeacon Ltd. to repurchase up to \$200 million of its Class A common shares from time to time, subject to market conditions. Shares may be repurchased on the open market or through privately negotiated transactions. This program does not have a stated expiration date. During 2010, OneBeacon repurchased and retired 0.7 million of its Class A common shares under this program for \$11 million. During 2008, OneBeacon repurchased and retired 3.4 million of its Class A common shares under this program for \$69 million. OneBeacon did not repurchase any shares in 2009.

Table of Contents

Cash Flows

Detailed information concerning White Mountains' cash flows during 2010, 2009 and 2008 follows:

Cash flows from operations for the years ended 2010, 2009, and 2008

Net cash flows provided from (used for) operations was \$56 million, \$(47) million and \$89 million in 2010, 2009 and 2008, respectively. Cash flows from operations decreased \$136 million from 2008 to 2009 mainly due to a \$138 million decrease in net investment income, primarily due to lower overall portfolio yields, shifts in portfolio mix to lower risk, lower yield investments and a decrease in the overall invested asset base. Cash flows from operations increased \$103 million from 2009 to 2010 as a \$44 million decrease in net investment income was more than offset by a \$133 million increase in cash flows from operations at WM Life Re and a \$14 million decrease in interest expense on debt. WM Life Re's cash flows from operations reflect approximately \$57 million and \$177 million of net payments in 2010 and 2009 to purchase derivative instruments, fund collateral trusts and receive collateral provided by counterparties under the terms of existing derivative contracts as a result of losses at WM Life Re. In addition, a decrease in cash flows from operations in 2010 at OneBeacon resulting from the Commercial Lines Transaction and the Personal Lines Transaction was offset by an increase in cash from operations at Esurance. White Mountains does not believe that these trends will have a meaningful impact on its future liquidity or its ability to meet its future cash requirements.

Cash flows from investing and financing activities for the year ended December 31, 2010

Financing and Other Capital Activities

During the first quarter of 2010, the Company declared and paid a \$9 million cash dividend to its common shareholders.

During 2010, the Company repurchased and retired 677,125 of its common shares for \$222 million through its share repurchase program and 10,746 of its common shares for \$4 million outside of its share repurchase program.

During 2010, OneBeacon Ltd. declared and paid \$316 million of cash dividends to its common shareholders, including \$80 million of regular quarterly dividends and a \$236 million special dividend. White Mountains received a total of \$240 million of these dividends.

During 2010, OneBeacon Ltd. repurchased and retired 0.7 million of its Class A common shares for \$11 million through its share repurchase program.

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

During 2010, OBH repurchased and retired a portion of the outstanding OBH Senior Notes for \$196 million and OneBeacon Insurance Company purchased a portion of the outstanding OBH Senior Notes for \$1 million. In addition, during the first quarter of 2010, OneBeacon repaid in full the \$14 million outstanding under the Atlantic Specialty Note.

During 2010, OneBeacon paid \$30 million of interest on the OBH Senior Notes.

During 2010, White Mountains Re declared and paid \$225 million of dividends to its immediate parent.

During 2010, White Mountains Re paid \$26 million of interest on the WMRe Senior Notes and \$19 million of dividends on the WMRe Preference Shares.

During 2010, White Mountains Re paid Sierra \$43 million on the Sierra Note, which consisted of \$33 million for the principal repayment and \$10 million for accrued interest. In accordance with an indemnification agreement, Berkshire reimbursed White Mountains \$37 million related to the Sierra Note payments.

During 2010, White Mountains contributed \$70 million to the Esurance segment.

During 2010, White Mountains contributed \$45 million to WM Life Re.

Acquisitions and Dispositions

During the first quarter of 2010, White Mountains Re acquired Central National for \$5 million.

During the third quarter of 2010, OneBeacon completed the Personal Lines Transaction and received consideration of approximately \$167 million.

During 2010, OneBeacon received \$10 million of additional consideration from the Commercial Lines Transaction.

During the fourth quarter of 2010, White Mountains sold its interest in Delos for \$22 million.

Cash flows from investing and financing activities for the year ended December 31, 2009

Financing and Other Capital Activities

During the third quarter of 2009, the Company repaid the entire \$200 million that had been drawn on the WTM Bank Facility. During 2009, the Company paid \$4 million in interest on the WTM Bank Facility.

During the first quarter of 2009, the Company declared and paid a \$9 million cash dividend to its common shareholders.

During 2009, OneBeacon Ltd. declared and paid \$80 million of regular quarterly cash dividends to its common shareholders. White Mountains received a total of \$60 million of these dividends.

During 2009, OBH repurchased and retired \$11 million face value of outstanding OBH Senior Notes for \$8 million and OBIC purchased \$58 million face value of outstanding OBH Senior Notes for \$55 million. In addition, during 2009, OneBeacon repaid the entire \$41 million outstanding under its Mortgage Note.

Table of Contents

During 2009, OneBeacon paid \$37 million of interest on the OBH Senior Notes and repaid \$2 million in principal on its other debt obligations.

During 2009, White Mountains Re declared and paid \$480 million of cash distributions to its immediate parent, which included \$350 million received in connection with the reorganization of its reinsurance operations and \$30 million it received from Galileo prior to its sale.

During 2009, White Mountains Re paid \$26 million of interest on the WMRe Senior Notes and \$19 million of dividends on the WMRe Preference Shares.

During 2009, AFI declared and paid \$4 million of capital distributions to its immediate parent.

During 2009, WM Advisors declared and paid \$15 million of cash dividends to its immediate parent.

During 2009, White Mountains contributed \$133 million to WM Life Re.

During 2009, White Mountains contributed \$98 million to Esurance.

During 2009, White Mountains Re contributed \$45 million to Scandinavian Re.

Acquisitions and Dispositions

During 2009, OneBeacon sold the renewal rights to its non-specialty commercial lines business for \$23 million.

Cash flows from investing and financing activities for the year ended December 31, 2008

Financing and Other Capital Activities

During the first quarter of 2008, the Company drew the full \$475 million available on WTM Bank Facility. The Company repaid \$175 million and \$100 million of this amount during the second and third quarters of 2008, respectively. The Company drew an additional \$176 million on the facility during October 2008 and repaid that amount in December 2008. During 2008, the Company paid \$8 million in interest on the WTM

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

Bank Facility.

During 2008, the Company declared and paid \$42 million in cash dividends to its common shareholders. During the third quarter of 2008, the Company's Board of Directors adopted a new dividend policy whereby the Company expects to declare a \$1 per share annual dividend in the first quarter of each year, rather than the then current \$2 per share quarterly dividend. As a result, the Company did not pay any dividends to its common share holders in the third and fourth quarters of 2008.

On October 31, 2008, White Mountains executed a transaction with Berkshire through which Berkshire exchanged substantially all of its 16.3% stake in White Mountains (1,634,921 of its 1,724,200 common shares) for 100% of a White Mountains subsidiary, which held CCIC, the International American Group and \$708 million in cash.

During 2008, the Company repurchased and retired 129,770 of its common shares for \$56 million through its share repurchase program.

During 2008, OneBeacon Ltd. declared and paid \$276 million of cash dividends to its common shareholders, including a \$195 million special dividend and \$80 million of regular quarterly dividends. White Mountains received a total of \$206 million of these dividends.

During 2008, OneBeacon Ltd. repurchased and retired 3.4 million of its Class A common shares for \$69 million through its share repurchase program.

In December 2008, OneBeacon contributed \$25 million to OBIC, one of its regulated insurance operating subsidiaries.

During 2008, OneBeacon declared and paid \$12 million in cash dividends on, and repaid the \$300 million redemption value of, preferred stock issued to Berkshire, using funds that had been held in trust.

During the third quarter of 2008, OBH repurchased and retired \$24 million face value of its outstanding OBH Senior Notes for \$22 million.

During 2008, OneBeacon paid \$40 million in interest on the OBH Senior Notes and repaid \$2 million in principal on its other debt obligations.

During 2008, White Mountains Re paid \$26 million of interest on the WMRe Senior Notes and \$19 million of dividends on the WMRe Preference Share.

During 2008, White Mountains Re declared and paid \$100 million of dividends to its immediate parent.

During 2008, White Mountains contributed \$105 million to WM Life Re.

During 2008, White Mountains contributed \$48 million to Esurance and \$3 million to AFI.

Acquisitions and Dispositions

During the first quarter of 2008, White Mountains Re acquired Helicon Re Holdings, Ltd. for approximately \$150 million.

During 2008, White Mountains acquired 100% of the outstanding debt and equity of AFI for \$75 million.

During 2008, OneBeacon sold one of its inactive licensed subsidiaries, Farmers and Merchants Insurance Company, for \$8 million.

TRANSACTIONS WITH RELATED PERSONS

See **Note 19 Transactions with Related Persons** in the accompanying Consolidated Financial Statements.

NON-GAAP FINANCIAL MEASURES

This report includes five non-GAAP financial measures that have been reconciled to their most comparable GAAP financial measures. White Mountains believes these measures to be more relevant than comparable GAAP measures in evaluating White Mountains' results of operations and financial condition.

Adjusted comprehensive income is a non-GAAP financial measure that excludes the change in equity in net unrealized gains and losses from Symetra's fixed maturity portfolio, net of applicable taxes, from comprehensive income. In the calculation of comprehensive income under GAAP, fixed maturity investments are marked-to-market while the liabilities to which those assets are matched are not. Symetra attempts to earn a spread between what it earns on its investments and what it pays out on its products. In order to try to fix this spread, Symetra invests in a manner that tries to match the duration and cash flows of its investments with the required cash outflows associated with its life insurance and structured settlements products. As a result, Symetra typically earns the same spread on in-force business whether interest rates fall or rise. Further, at any given time, some of Symetra's structured settlement obligations may extend 40 or 50 years into the future, which is further out than the longest maturing fixed maturity investments regularly available for purchase in the market (typically 30 years). For these long-dated products, Symetra is unable to fully match the obligation with assets until the remaining expected payout schedule comes within the duration of securities available in the market. If at that time, these fixed maturity investments have yields that are lower than the yields expected when the structured settlement product was originally priced, the spread for the product will shrink and Symetra will ultimately harvest lower returns for its shareholders. GAAP comprehensive income increases when rates decline, which would suggest an increase in the value of Symetra - the opposite of what is happening to the intrinsic value of the business. Therefore, White Mountains' management and Board of Directors use adjusted comprehensive income when assessing Symetra's quarterly financial performance. In addition, this measure is typically the predominant component of change in adjusted book value per share, which is used in calculation of White Mountains' performance for both short-term (annual bonus) and long-term incentive plans. The reconciliation of adjusted comprehensive income to comprehensive income is included on page 46.

Adjusted book value per share is a non-GAAP measure which is derived by expanding the GAAP calculation of book value per White Mountains common share to exclude equity in net unrealized gains and losses from Symetra's fixed maturity portfolio, net of applicable taxes. In addition, the number of common shares outstanding used in the calculation of adjusted book value per share are adjusted to exclude unearned restricted common shares, the compensation cost of which, at the date of calculation, has yet to be amortized. The reconciliation of adjusted book value per share to GAAP book value per share is included on page 45.

Total capital at White Mountains is comprised of White Mountains' common shareholders' equity, debt and noncontrolling interest in OneBeacon Ltd and the WMRe Preference Shares. Total adjusted capital excludes the equity in net unrealized gains and losses from Symetra's fixed maturity portfolio, net of applicable taxes, from total capital. The reconciliation of total capital to total adjusted capital is included on page 62.

Esurance's adjusted expense ratio and adjusted combined ratio are non-GAAP financial measures. To calculate the adjusted expense ratio and adjusted combined ratio, acquisition expenses are reduced by referral fee revenue. Referral fee revenue, which is recorded as a component of

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

other revenues under GAAP, represents fees that Esurance receives for referring customers for whom it does not write policies to other insurance carriers and aggregators. Management believes that Esurance's adjusted expense ratio and adjusted combined ratio are better measures to evaluate Esurance's underwriting results than its GAAP expense ratio and GAAP combined ratio because the expenses that are incurred to acquire policyholders at Esurance, particularly advertising expenses, also lead to referral fee revenue. The reconciliation of Esurance's adjusted expense ratio and adjusted combined ratio to its GAAP expense ratio and GAAP combined ratio follows:

	Year Ended December 31,		
	2010	2009	2008
GAAP expense ratio	31%	30%	29%
Referral fees	(2)%	(1)%	(1)%
Adjusted expense ratio	29%	29%	28%
GAAP combined ratio	105%	104%	106%
Referral fees	(2)%	(1)%	(1)%
Adjusted combined ratio	103%	103%	105%

Table of Contents

CRITICAL ACCOUNTING ESTIMATES

Management's Discussion and Analysis of Financial Condition and Results of Operations discuss the Company's consolidated financial statements, which have been prepared in accordance with GAAP. The financial statements presented herein include all adjustments considered necessary by management to fairly present the financial position, results of operations and cash flows of White Mountains.

The preparation of financial statements in conformity with GAAP requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities as of the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. Certain of these estimates are considered critical in that they involve a higher degree of judgment and are subject to a significant degree of variability. On an ongoing basis, management evaluates its estimates, including those related to fair value measurements of investments and other financial instruments, valuation of liabilities associated with an assumed reinsurance agreement covering benefit guarantees on variable annuities in Japan, its property-casualty loss and LAE reserves and its property-casualty reinsurance contracts. Management bases its estimates on historical experience and on various other factors that are believed to be reasonable under the circumstances, the results of which form the basis for making judgments about the carrying values of assets and liabilities that are not readily apparent from other sources.

1. Loss and Loss Adjustment Expense Reserves

General

White Mountains establishes loss and LAE reserves that are estimates of amounts needed to pay claims and related expenses in the future for insured events that have already occurred. The process of estimating reserves involves a considerable degree of judgment by management and, as of any given date, is inherently uncertain.

Loss and LAE reserves are typically comprised of (1) case reserves for claims reported and (2) reserves for losses that have occurred but for which claims have not yet been reported, referred to as incurred but not reported reserves, which include a provision for expected future development on case reserves. Case reserves are estimated based on the experience and knowledge of claims staff regarding the nature and potential cost of each claim and are adjusted as additional information becomes known or payments are made. IBNR reserves are derived by subtracting paid loss and LAE and case reserves from estimates of ultimate loss and LAE. Actuaries estimate ultimate loss and LAE using various generally accepted actuarial methods applied to known losses and other relevant information. Like case reserves, IBNR reserves are adjusted as additional information becomes known or payments are made.

Ultimate loss and LAE are generally determined by extrapolation of claim emergence and settlement patterns observed in the past that can reasonably be expected to persist into the future. In forecasting ultimate loss and LAE with respect to any line of business, past experience with respect to that line of business is the primary resource, but cannot be relied upon in isolation. White Mountains' own experience, particularly claims development experience, such as trends in case reserves, payments on and closings of claims, as well as changes in business mix and coverage limits, is the most important information for estimating its reserves. External data, available from organizations such as statistical bureaus, consulting firms and reinsurance companies, is sometimes used to supplement or corroborate White Mountains' own experience, and can be especially useful for estimating costs of new business. For some lines of business, such as long-tail coverages discussed below, claims

data reported in the most recent accident year is often too limited to provide a meaningful basis for analysis due to the typical delay in reporting of claims. For this type of business, White Mountains uses a selected loss ratio method for the initial accident year or years. This is a standard and accepted actuarial reserve estimation method in these circumstances in which the loss ratio is selected based upon information used in pricing policies for that line of business, as well as any publicly available industry data, such as industry pricing, experience and trends, for that line of business.

Uncertainties in estimating ultimate loss and LAE are magnified by the time lag between when a claim actually occurs and when it is reported and settled. This time lag is sometimes referred to as the claim-tail. The claim-tail for most property coverages is typically short (usually a few days up to a few months). The claim-tail for liability/casualty coverages, such as automobile liability, general liability, products liability, multiple peril coverage, and workers compensation, can be especially long as claims are often reported and ultimately paid or settled years, even decades, after the related loss events occur. During the long claims reporting and settlement period, additional facts regarding coverages written in prior accident years, as well as about actual claims and trends may become known and, as a result, White Mountains may adjust its reserves. If management determines that an adjustment is appropriate, the adjustment is booked in the accounting period in which such determination is made in accordance with GAAP. Accordingly, should reserves need to be increased or decreased in the future from amounts currently established, future results of operations would be negatively or positively impacted, respectively.

Table of Contents

In determining ultimate loss and LAE, the cost to indemnify claimants, provide needed legal defense and other services for insureds and administer the investigation and adjustment of claims are considered. These claim costs are influenced by many factors that change over time, such as expanded coverage definitions as a result of new court decisions, inflation in costs to repair or replace damaged property, inflation in the cost of medical services and legislated changes in statutory benefits, as well as by the particular, unique facts that pertain to each claim. As a result, the rate at which claims arose in the past and the costs to settle them may not always be representative of what will occur in the future. The factors influencing changes in claim costs are often difficult to isolate or quantify and developments in paid and incurred losses from historical trends are frequently subject to multiple and conflicting interpretations. Changes in coverage terms or claims handling practices may also cause future experience and/or development patterns to vary from the past. A key objective of actuaries in developing estimates of ultimate loss and LAE, and resulting IBNR reserves, is to identify aberrations and systemic changes occurring within historical experience and accurately adjust for them so that the future can be projected reliably. Because of the factors previously discussed, this process requires the use of informed judgment and is inherently uncertain.

White Mountains' actuaries use several generally accepted actuarial methods to evaluate its loss reserves, each of which has its own strengths and weaknesses. Management places more or less reliance on a particular method based on the facts and circumstances at the time the reserve estimates are made. These methods generally fall into one of the following categories or are hybrids of one or more of the following categories:

- *Historical paid loss development methods:* These methods use historical loss payments over discrete periods of time to estimate future losses. Historical paid loss development methods assume that the ratio of losses paid in one period to losses paid in an earlier period will remain constant. These methods necessarily assume that factors that have affected paid losses in the past, such as inflation or the effects of litigation, will remain constant in the future. Because historical paid loss development methods do not use case reserves to estimate ultimate losses, they can be more reliable than the other methods discussed below that look to case reserves (such as actuarial methods that use reported losses) in situations where there are significant changes in how case reserves are established by a company's claims adjusters. However, historical paid loss development methods are more leveraged, meaning that small changes in payments have a larger impact on estimates of ultimate losses, than actuarial methods that use reported losses because cumulative loss payments take much longer to equal the expected ultimate losses than cumulative reported amounts. In addition, and for similar reasons, historical paid loss development methods are often slow to react to situations when new or different factors arise than those that have affected paid losses in the past.
- *Historical reported loss development methods:* These methods, like historical paid loss development methods, assume that the ratio of losses in one period to losses in an earlier period will remain constant in the future. However, instead of using paid losses, these methods use reported losses (i.e., the sum of cumulative historical loss payments plus outstanding case reserves) over discrete periods of time to estimate future losses. Historical reported loss development methods can be preferable to historical paid loss development methods because they explicitly take into account open cases and the claims adjusters' evaluations of the cost to settle all known claims. However, historical reported loss development methods necessarily assume that case reserving practices are consistently applied over time. Therefore, when there have been significant changes in how case reserves are established, using reported loss data to project ultimate losses can be less reliable than other methods.
- *Expected loss ratio methods:* These methods are based on the assumption that ultimate losses vary proportionately with premiums. Expected loss ratios are typically developed based upon the information used in pricing, and are multiplied by the total amount of premiums written to calculate ultimate losses. Expected loss ratio methods are useful for estimating ultimate losses in the early years of long-tailed lines of business, when little or no paid or reported loss information is available.
- *Adjusted historical paid and reported loss development methods:* These methods take traditional historical paid and reported loss development methods and adjust them for the estimated impact of changes from the past in factors such as inflation, the speed of claim payments or the adequacy of case reserves. Adjusted historical paid and reported loss development methods are often more reliable methods of predicting ultimate losses in periods of significant change, provided the actuaries can develop methods to reasonably quantify the impact of changes.

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

White Mountains performs an actuarial review of its recorded reserves each quarter. White Mountains' actuaries compare the previous quarter's estimates of paid loss and LAE, case reserves and IBNR to amounts indicated by actual experience. Differences between previous estimates and actual experience are evaluated to determine whether a given actuarial method for estimating loss and LAE should be relied upon to a greater or lesser extent than it had been in the past. While some variance is expected each quarter due to the inherent uncertainty in loss and LAE, persistent or large variances would indicate that prior assumptions and/or reliance on certain reserving methods may need to be revised going forward.

Table of Contents**OneBeacon**

OneBeacon, like other insurance companies, categorizes and tracks its insurance reserves by line of business, such as automobile liability, multiple peril package business, and workers compensation. Furthermore, OneBeacon regularly reviews the appropriateness of reserve levels at the line of business level, taking into consideration the variety of trends that impact the ultimate settlement of claims for the subsets of claims in each particular line of business.

In its selection of recorded reserves, OneBeacon historically gave greater weight to adjusted paid loss development methods, which are not dependent on the consistency of case reserving practices, over methods that rely on reported losses. In recent years, the amount of weight given to methods based on reported losses has increased with OneBeacon's confidence that its case reserving practices have been more consistently applied.

Upon completion of each quarterly review, OneBeacon's actuaries select indicated reserve levels based on the results of the actuarial methods described previously, which are the primary consideration in determining management's best estimate of required reserves. However, in making its best estimate, management also considers other qualitative factors that may lead to a difference between held reserves and actuarially recommended levels in the future. Typically, these factors exist when management and OneBeacon's actuaries conclude that there is insufficient historical reported and paid loss information or that trends included in the historical reported and paid loss information are unlikely to repeat in the future. Such factors include, among others, recent entry into new markets or new products, improvements in the claims department that are expected to lessen future ultimate loss costs and legal and regulatory developments. At December 31, 2010 and 2009, total carried reserves were 11.7% and 10.2% above the actuarial point estimate, respectively.

Loss and LAE Reserves by Line of Business

OneBeacon's net loss and LAE reserves at December 31, 2010 and 2009 were as follows:

Millions	December 31, 2010			December 31, 2009		
	Case	IBNR	Total	Case	IBNR	Total
Specialty insurance operations	\$ 283.2	\$ 498.2	\$ 781.4	\$ 215.6	\$ 442.7	\$ 658.3
Other insurance operations	335.1	285.8	620.9	519.1	564.5	1,083.6
Total	\$ 618.3	\$ 784.0	\$ 1,402.3	\$ 734.7	\$ 1,007.2	\$ 1,741.9

OneBeacon's net loss and LAE reserves by line of business at December 31, 2010 and 2009 were as follows:

Millions	December 31, 2010			December 31, 2009		
	Case	IBNR	Total	Case	IBNR	Total
Workers compensation	\$ 171.0	\$ 102.6	\$ 273.6	\$ 134.7	\$ 126.7	\$ 261.4
Personal automobile liability	83.2	35.4	118.6	254.4	117.6	372.0

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

Multiple peril	.1	135.7	135.8	(30.7)	222.4	191.7
Commercial automobile liability	81.3	53.7	135.0	90.5	68.9	159.4
General liability(1)	163.9	388.7	552.6	129.3	382.6	511.9
Homeowners/Farmowners	4.0	2.3	6.3	41.8	22.9	64.7
Other(2)	114.8	65.6	180.4	114.7	66.1	180.8
Total	\$ 618.3	\$ 784.0	\$ 1,402.3	\$ 734.7	\$ 1,007.2	\$ 1,741.9

(1) Includes loss and LAE reserves related to professional liability.

(2) Includes loss and LAE reserves related to marine liability.

For loss and allocated loss adjustment expense reserves, excluding A&E, the key assumption as of December 31, 2010 was that the impact of the various reserving factors, as described below, on future paid losses would be similar to the impact of those factors on the historical loss data with the following exceptions:

- Severity trends have been relatively stable over the relevant historical period. The actuarial methods used would project losses assuming continued stability in severity trends. Management has considered future increases in loss severity trends in making its reserve selections.
- During 2010, OneBeacon reassigned a significant amount of its claims to a run-off claims unit. While initial emerged losses have suggested better than expected outcomes, management has selected reserves more in line with its previous expectations.

Table of Contents

The major causes of material uncertainty (reserving factors) generally will vary for each product line, as well as for each separately analyzed component of the product line. The following section details reserving factors by product line. There could be other reserving factors that may impact ultimate claim costs. Each reserving factor presented will have a different impact on estimated reserves. Also, reserving factors can have offsetting or compounding effects on estimated reserves. For example, in workers compensation, the use of expensive medical procedures that result in medical cost inflation may enable workers to return to work faster, thereby lowering indemnity costs. Thus, in almost all cases, it is impossible to discretely measure the effect of a single reserving factor and construct a meaningful sensitivity expectation. Actual results will likely vary from expectations for each of these assumptions, resulting in an ultimate claim liability that is different from that being estimated currently.

Workers compensation

Workers compensation covers an employer's liability for injuries, disability or death of employees, without regard to fault, as prescribed by state workers compensation law and other statutes. Workers compensation is generally considered a long tail coverage, as it takes a relatively long period of time to finalize claims from a given accident year. While certain payments such as initial medical treatment or temporary wage replacement for the injured worker are made quickly, some other payments are made over the course of several years, such as awards for permanent partial injuries. In addition, some payments can run as long as the injured worker's life, such as permanent disability benefits and ongoing medical care. Despite the possibility of long payment tails, the reporting lags are generally short, settlements are generally not complex, and most of the liability can be considered high frequency with moderate severity. The largest reserve risk generally comes from the low frequency, high severity claims providing lifetime coverage for medical expense arising from a worker's injury. Examples of common reserving factors that can change and, thus, affect the estimated workers compensation reserves include:

General workers compensation reserving factors

- Mortality trends of injured workers with lifetime benefits and medical treatment or dependents entitled to survivor benefits
- Degree of cost shifting between workers compensation and health insurance
- Changes in claim handling philosophies (e.g., case reserving standards)

Indemnity reserving factors

- Time required to recover from the injury
- Degree of available transitional jobs
- Degree of legal involvement
- Changes in the interpretations and processes of various workers compensation bureaus' oversight of claims

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

- Future wage inflation for states that index benefits
- Changes in the administrative policies of second injury funds
- Re-marriage rate for spouse in instances of death

Medical reserving factors

- Changes in the cost of medical treatments, including prescription drugs, and underlying fee schedules
- Frequency of visits to health providers
- Number of medical procedures given during visits to health providers
- Types of health providers used
- Type of medical treatments received
- Use of preferred provider networks and other medical cost containment practices
- Availability of new medical processes and equipment
- Changes in the use of pharmaceutical drugs
- Degree of patient responsiveness to treatment

Workers compensation book of business reserving factors

- Product mix
- Injury type mix
- Changes in underwriting standards

Table of Contents

Personal automobile liability

Automobile covers both physical damage and liability coverage. Automobile physical damage insurance covers loss or damage to vehicles from collision, vandalism, fire, theft or other causes. Automobile liability insurance covers bodily injury of others, damage to their property and costs of legal defense resulting from a collision caused by the insured. The personal automobile product line is a mix of property and liability coverages and, therefore, includes both short- and long-tail coverages. The payments that are made quickly typically pertain to automobile physical damage (property) claims and property damage (liability) claims. The payments that take longer to finalize and are more difficult to estimate relate to bodily injury claims. Personal automobile reserves are typically analyzed in three components: bodily injury liability, property damage liability, and collision/comprehensive claims. This last component has minimum reserve risk and fast payouts and, accordingly, separate factors are not presented. Reporting lags are relatively short and the claim settlement process for personal automobile liability generally is the least complex of the liability products. It is generally viewed as a high frequency, low to moderate severity product line.

Examples of common reserving factors that can change and, thus, affect the estimated personal automobile liability reserves include:

Personal automobile liability reserving factors

- Trends in jury awards
- Changes in the underlying court system and its philosophy
- Changes in case law
- Litigation trends
- Frequency of claims with payment capped by policy limits
- Change in average severity of accidents, or proportion of severe accidents
- Subrogation opportunities
- Degree of patient responsiveness to treatment
- Changes in claim handling philosophies (e.g., case reserving standards)

Personal automobile liability book of business reserving factors

- Changes in policy provisions (e.g., deductibles, policy limits, or endorsements)

- Changes in underwriting standards

Multiple peril

Multiple peril represents a package policy sold to insureds or to members of trade associations or other groups that include general liability and property insurance. General liability covers businesses for any liability resulting from bodily injury and property damage arising from general business operations, accidents on a premises and the products manufactured or sold. Property covers losses to a business premises, inventory and equipment as a result of weather, fire, theft and other causes. Because commercial multiple peril provides a combination of property and liability coverage typically for small businesses, it includes both short and long tail coverages. For property coverage, it generally takes a relatively short period of time to close claims, while for the other coverages, generally for the liability coverages, it takes a longer period of time to close claims. The reserving risk for this line is dominated by the liability coverage portion of this product, except occasionally in the event of catastrophic or large single losses.

Multiple peril liability reserves here are generally analyzed as two components: bodily injury and property damage. Bodily injury payments reimburse the claimant for damages pertaining to physical injury as a result of the policyholder's legal obligation arising from non-intentional acts such as negligence, subject to the insurance policy provisions. In some cases the damages can include future wage loss (which is a function of future earnings power and wage inflation) and future medical treatment costs. Property damage payments result from damages to the claimant's private property arising from the policyholder's legal obligation for non-intentional acts. In most cases, property damage losses are a function of costs as of the loss date, or soon thereafter. Defense costs are also a part of the insured costs covered by liability policies and can be significant, sometimes greater than the cost of the actual paid claims, though for some products this risk is mitigated by policy language such that the insured portion of defense costs erodes the amount of policy limit available to pay the claim.

Multiple peril liability is generally considered a long tail line, as it takes a relatively long period of time to finalize and settle claims from a given accident year. The speed of claim reporting and claim settlement is a function of the specific coverage provided and the jurisdiction, among other factors. There are numerous components underlying the multiple peril liability product line. Some of these have relatively moderate payment patterns (with most of the claims for a given accident year closed within 5 to 7 years), while others can have extreme lags in both reporting and payment of claims (e.g., a reporting lag of a decade for construction defect claims).

Table of Contents

Examples of common reserving factors that can change and, thus, affect the estimated multiple peril liability reserves include:

Multiple peril liability reserving factors

- Changes in claim handling philosophies (e.g., case reserving standards)
- Changes in policy provisions or court interpretations of such provisions
- New theories of liability
- Trends in jury awards
- Changes in the propensity to sue, in general with specificity to particular issues
- Changes in statutes of limitations
- Changes in the underlying court system
- Distortions from losses resulting from large single accounts or single issues
- Changes in tort law
- Shifts in lawsuit mix between federal and state courts
- Changes in settlement patterns

Multiple peril liability book of business reserving factors

- Changes in policy provisions (e.g., deductibles, policy limits, or endorsements)
- Changes in underwriting standards
- Product mix (e.g., size of account, industries insured, or jurisdiction mix)

Commercial automobile liability

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

The commercial automobile product line is a mix of property and liability coverages and, therefore, includes both short and long tail coverages. The payments that are made quickly typically pertain to auto physical damage (property) claims and property damage (liability) claims. The payments that take longer to finalize and are more difficult to estimate relate to bodily injury claims. Commercial automobile reserves are typically analyzed in three components; bodily injury liability, property damage liability, and collision/comprehensive claims. This last component has minimum reserve risk and fast payouts and, accordingly, separate reserving factors are not presented. In general, claim reporting lags are minor, claim complexity is not a major issue, and the line is viewed as high frequency, low to moderate severity.

Examples of common reserving factors that can change and, thus, affect the estimated commercial automobile liability reserves include:

Bodily injury and property damage liability reserving factors

- Trends in jury awards
- Changes in the underlying court system
- Changes in case law
- Litigation trends
- Frequency of claims with payment capped by policy limits
- Change in average severity of accidents, or proportion of severe accidents
- Subrogation opportunities
- Changes in claim handling philosophies (e.g., case reserving standards)
- Frequency of visits to health providers
- Number of medical procedures given during visits to health providers
- Types of health providers used
- Types of medical treatments received
- Changes in cost of medical treatments
- Degree of patient responsiveness to treatment

Commercial automobile liability book of business reserving factors

- Changes in policy provisions (e.g., deductibles, policy limits, or endorsements)

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

- Changes in mix of insured vehicles (e.g., long-haul trucks versus local and smaller vehicles, or fleet risks versus non-fleet risks)
- Changes in underwriting standards

General liability

See the above discussions under the liability product lines with regard to reserving factors for multiple peril.

Table of Contents

Homeowners/Farmowners

Homeowners/Farmowners is generally considered a short-tail coverage. Most payments are related to the property portion of the policy, where the claim reporting and settlement process is generally restricted to the insured and the insurer. Claims on property coverage are typically reported soon after the actual damage occurs, although delays of several months are not unusual. The resulting settlement process is typically fairly short term, although exceptions do exist. The liability portion of the homeowners/farmowners policy generates claims which take longer to pay due to the involvement of litigation and negotiation, but with generally small reporting lags. Overall, the line is generally high frequency, low to moderate severity (except for catastrophes), with simple to moderate claim complexity. Examples of common reserving factors that can change and, thus, affect the estimated homeowners/farmowners reserves include:

Non-catastrophe reserving factors

- Salvage opportunities
- Amount of time to return property to residential use
- Changes in weather patterns
- Local building codes
- Litigation trends
- Trends in jury awards

Catastrophe reserving factors

- Physical concentration of policyholders
- Availability and cost of local contractors
- Local building codes
- Quality of construction of damaged homes
- Amount of time to return property to residential use
- For the more severe catastrophic events, demand surge inflation, whereby the greatly increased demand for building materials such as plywood far surpasses the immediate supply, leading to short-term material increases in building material costs

Homeowners/Farmowners book of business reserving factors

- Policy provisions mix (e.g., deductibles, policy limits, or endorsements)
- Degree of concentration of policyholders
- Changes in underwriting standards

OneBeacon Loss and LAE Development

Loss and LAE development 2010

In 2010, OneBeacon experienced \$51 million of favorable loss and LAE reserve development on prior accident year loss reserves. The favorable loss reserve development was primarily due to lower than expected severity on losses related to professional liability business, multiple peril liability and other general liability lines. The favorable development also included an \$8 million release of commercial catastrophe reserves associated with storms occurring in 2004 and 2005.

Specifically, at December 31, 2009, management had revised its expectations downward with respect to future loss emergence in the professional liability business, which is included in the general liability line of business, which had initially been based on market analysis when this business was initiated in 2002 and 2003. However, during 2010, losses continued to be significantly lower than these revised expectations. As a result, management lowered its selected reserves on the earliest years which affected more recent years as total loss expectations for those years are based in part on prior years' results. The impact of this revised estimate was a decrease to professional liability reserves of \$19 million.

At December 31, 2009, management had recorded \$8 million of reserves for certain claims related to catastrophes from accident years 2004 and 2005 related to OneBeacon's excess property business. During 2010, these claims were resolved for amounts below OneBeacon's policy coverage therefore the reserves were no longer necessary.

At December 31, 2009, based on actuarial techniques described above, management estimated that IBNR related to multiple peril liability was \$171 million, or approximately 93% of case reserves of \$184 million for accident years 2004 through 2009. During 2010, case incurred loss and allocated LAE (ALAE) was \$66 million, which was less than expected for this line of business. As a result of the lower than expected case incurred loss and ALAE during 2010, the actuarial methods based on case incurred losses produced lower estimated ultimate losses for these accident years. As a result, at December 31, 2010, the IBNR was determined to be \$86 million, or approximately 57% of the remaining case reserves. The impact of this revised estimate was a decrease to multiple peril liability reserves of \$18 million.

Table of Contents

At December 31, 2009, based on actuarial techniques described above, management estimated that IBNR related to general liability occurrence was \$107 million, or approximately 265% of case reserves of \$40 million for accident years 2004 through 2009. During 2010, case incurred loss and ALAE was \$33 million, which was less than expected for this line of business. As a result of the lower than expected case incurred loss and ALAE during 2010, the actuarial methods based on case incurred losses produced lower estimated ultimate losses for these accident years. As a result, at December 31, 2010, the IBNR was determined to be \$62 million, or approximately 164% of the remaining case reserves. The impact of this revised estimate was a decrease to general liability occurrence reserves of \$12 million.

In addition to the development described for the lines of business above, management also recorded a \$6 million net increase in IBNR in other lines of business as a result of its review of loss reserves at December 31, 2010. The change in IBNR for each other line of business was not individually significant.

Loss and LAE development 2009

In 2009, OneBeacon experienced \$83 million of favorable loss and LAE reserve development on prior accident year loss reserves. The favorable loss reserve development was primarily related to lower than expected severity on losses. The favorable loss reserve development was primarily related to professional liability business, multiple peril liability and other general liability lines and was partially offset by adverse loss reserve development at AutoOne.

Specifically, at December 31, 2008, management had revised its expectations downward with respect to future loss emergence in the professional liability business, which is included in the general liability line of business. The original expectations had initially been based on market analysis when this business was initiated in 2002 and 2003. However, during 2009, losses continued to be significantly lower than these revised expectations. As a result, management lowered its selected reserves on the earliest years of this business. Loss estimates in more recent years were also affected as total loss expectations for later years are based in part on prior years' results. The impact of this revised estimate was a decrease to professional liability reserves of \$60 million.

At December 31, 2008, management had estimated that future payments from PIP litigation from AutoOne business would be approximately \$8 million. During 2009, the legal expenses related to this litigation were higher than expected. As a result, management increased estimates of all accident years for AutoOne. The total increase in estimate was \$33 million.

At December 31, 2008, based on actuarial techniques described above, management estimated that IBNR related to multiple peril liability was \$174 million, or approximately 85% of case reserves of \$205 million for 2002 and subsequent accident years. During 2009, case incurred loss and ALAE was \$37 million, which was less than expected for this line of business. As a result of the lower than expected case incurred loss and ALAE during 2009, the actuarial methods based on case incurred losses produced lower estimated ultimate losses for these accident years. As a result, at December 31, 2009, the IBNR was determined to be \$95 million, or approximately 73% of the remaining case reserves. The impact of this revised estimate was a decrease to multiple peril liability reserves of \$43 million.

At December 31, 2008, based on actuarial techniques described above, management estimated that IBNR related to general liability occurrence was \$94 million, or approximately 275% of case reserves of \$34 million for 2002 and subsequent accident years. During 2009, case incurred loss and ALAE was \$16 million, which was less than expected for this line of business. As a result of the lower than expected case incurred loss

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

and ALAE during 2009, the actuarial methods based on case incurred losses produced lower estimated ultimate losses for these accident years. As a result, at December 31, 2009, the IBNR was determined to be \$62 million, or approximately 214% of the remaining case reserves. The impact of this revised estimate was a decrease to general liability occurrence reserves of \$14 million.

In addition to the development described for the lines of business above, management also recorded changes in IBNR in other lines of business as a result of its review of loss reserves at December 31, 2009 that essentially offset. The change in IBNR for each other line of business was not individually significant.

Loss and LAE development 2008

In 2008, OneBeacon experienced \$62 million of favorable loss reserve development, primarily related to lower than expected severity on losses. The favorable loss reserve development was primarily related to professional liability business and multiple peril liability and was partially offset by adverse loss reserve development at AutoOne and in legacy run-off.

Specifically, at December 31, 2007, management had revised its expectations downward with respect to future loss emergence in the professional liability business, which is included in the general liability line of business. The original expectations had initially been based on market analysis when this business was initiated in 2002 and 2003. However, during 2008, losses continued to be significantly lower than these revised expectations. As a result, management lowered its selected reserves on the earliest years of this business. Loss estimates in more recent years were also affected as total loss expectations for later years are based in part on prior years' results. The impact of this revised estimate was a decrease to professional liability reserves of \$51 million.

Table of Contents

At December 31, 2007, management had estimated that future payments from PIP litigation from OneBeacon's NYAIP business would be approximately \$14 million. During 2008, the legal expenses related to this litigation were higher than expected as the 2002 accident year neared conclusion. As a result, management increased estimates of all accident years for NYAIP and other similar business in New York. The total increase in estimate was \$11 million.

At December 31, 2007, based on actuarial techniques described above, management estimated that IBNR related to multiple peril liability was \$137 million, or approximately 64% of case reserves of \$213 million for 2002 and subsequent accident years. During 2008, case incurred loss ALAE was \$16 million, which was less than expected for this line of business. As a result of the lower than expected case incurred loss and ALAE during 2008, the actuarial methods based on case incurred losses produced lower estimated ultimate losses for these accident years. As a result, at December 31, 2008, the IBNR was determined to be \$87 million, or approximately 64% of the remaining case reserves. The impact of this revised estimate was a decrease to multiple peril liability reserves of \$34 million.

At December 31, 2007, based on actuarial techniques described above, management estimated that IBNR related to workers compensation was \$41 million, or approximately 96% of case reserves of \$43 million for 2005 and subsequent accident years. During 2008, case incurred loss and ALAE was \$20 million, which was greater than expected for this line of business. As a result of the higher than expected case incurred loss and ALAE during 2008, the actuarial methods based on case incurred losses produced higher estimated ultimate losses for these accident years. As a result, at December 31, 2008, the IBNR was determined to be \$35 million, or approximately 81% of the remaining case reserves. The impact of this revised estimate was an increase to workers compensation reserves of \$14 million.

In addition to the development described for the lines of business above, management also recorded a \$2 million net decrease in IBNR in other lines of business as a result of its review of loss reserves at December 31, 2008. The change in IBNR for each other line of business was not individually significant.

Range of Reserves by Line of Business

OneBeacon's range of reserve estimates at December 31, 2010 was evaluated to consider the strengths and weaknesses of the actuarial methods applied against OneBeacon's historical claims experience data. The following table shows the recorded reserves and the high and low ends of OneBeacon's range of reasonable loss reserve estimates at December 31, 2010. The high and low ends of OneBeacon's range of reserve estimates in the table below are based on the results of various actuarial methods described above.

Millions	December 31, 2010		
	Low	Recorded	High
Specialty insurance operations	\$ 626	\$ 781.4	\$ 807
Other insurance operations	455	620.9	665
Total	\$ 1,081	\$ 1,402.3	\$ 1,472

The following table shows the recorded reserves and the high and low ends of OneBeacon's range of reasonable loss and LAE reserve estimates by line of business at December 31, 2010.

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

Millions	December 31, 2010		
	Low	Recorded	High
Workers compensation	\$ 198	\$ 273.6	\$ 292
Personal automobile liability	110	118.6	131
Multiple peril	67	135.8	141
Commercial automobile liability	120	135.0	138
General liability	405	552.6	570
Homeowners/Farmowners	6	6.3	7
Other	175	180.4	193
Total	\$ 1,081	\$ 1,402.3	\$ 1,472

The recorded reserves represent management's best estimate of unpaid loss and LAE by line of business. OneBeacon uses the results of several different actuarial methods to develop its estimate of ultimate reserves. While OneBeacon has not determined the statistical probability of actual ultimate paid losses falling within the range, OneBeacon believes that it is reasonably likely that actual ultimate paid losses will fall within the ranges noted above because the ranges were developed by using several different generally accepted actuarial methods.

Table of Contents

The probability that ultimate losses will fall outside of the ranges of estimates by line of business is higher for each line of business individually than it is for the sum of the estimates for all lines taken together due to the effects of diversification. The diversification effects result from the fact that losses across OneBeacon's different lines of business are not completely correlated. Although OneBeacon believes its reserves are reasonably stated, ultimate losses may deviate, perhaps materially, from the recorded reserve amounts and could be above or below the range of actuarial projections. This is because ranges are developed based on known events as of the valuation date, whereas the ultimate disposition of losses is subject to the outcome of events and circumstances that may be unknown as of the valuation date.

The percentages shown in the following table represent the linear interpolation of where OneBeacon's recorded loss and LAE reserves are within the range of reserves estimates by line of business at December 31, 2010 and 2009, where the low end of the range equals zero, the middle of the range equals 50% and the high end of the range equals 100%.

(expressed as a percentage of the range)	December 31,	
	2010	2009
Workers compensation	80%	58%
Personal automobile liability	40	50
Multiple peril	93	89
Commercial automobile liability	82	74
General liability	90	94
Homeowners/Farmowners	33	76
Other	34	97
Total	82%	78%

During 2010, emerged loss experience for workers compensation was lower than had been projected by several of the actuarial methods. As this favorable emerged loss experience coincides with some significant changes in claims staffing, management has selected reserves consistent with previous projections which results in selected reserves being higher in the range.

At year-end 2009, management had recorded reserves in other lines for catastrophe claims from accident years 2004 and 2005 above the actuarial projections. During 2010, these losses were settled and are no longer included in the outstanding reserves as of December 31, 2010. As a result, management selected reserves at year-end 2010 lower in the range of actuarial methods.

Overall, management is concerned about the impact of future increases in inflation, including adverse changes in tort liability. These types of changes would result in deterioration in the loss reserves, therefore, management has selected loss reserves somewhat higher relative to actuarial indications than in previous years.

Sensitivity Analysis

The following discussion includes disclosure of possible variations from current estimates of loss reserves due to a change in certain key assumptions. Each of the impacts described below is estimated individually, without consideration for any correlation among key assumptions or among lines of business. Therefore, it would be inappropriate to take each of the amounts described below and add them together in an attempt to estimate volatility for OneBeacon's reserves in total. It is important to note that the variations discussed are not meant to be a worst-case scenario, and therefore, it is possible that future variations may be more than amounts discussed below.

- *Workers compensation:* Recorded reserves for workers compensation were \$274 million at December 31, 2010. The two most important assumptions for workers compensation reserves are loss development factors and loss cost trends, particularly medical cost inflation. Loss development patterns are dependent on medical cost inflation. Approximately half of the workers compensation net reserves are related to future medical costs. Across the entire reserve base, a 0.5 point change in calendar year medical inflation would have changed the estimated net reserve by approximately \$49 million at December 31, 2010, in either direction.
- *Professional liability:* Recorded reserves for professional liability were \$364 million across all lines at December 31, 2010. A key assumption for professional liability is the implicit loss cost trend, particularly the severity inflation trend component of loss costs. Across the entire reserve base, a 10.0 point change in assumed annual severity would have changed the estimated net reserve by approximately \$60 million at December 31, 2010, in either direction.
- *Multiple peril liability:* Recorded reserves for multiple peril were \$136 million at December 31, 2010. Reported loss development patterns are a key assumption for these lines of business, particularly for more mature accident years. Historically, assumptions on reported loss development patterns have been impacted by, among other things, emergence of new types of claims (e.g. construction defect claims) or a shift in the mixture between smaller, more routine claims and larger, more complex claims. If case reserve adequacy for non-construction defect claims changed by 10.0 points this would have changed the estimated net reserve by approximately \$20 million at December 31, 2010, in either direction.

Table of Contents

A&E Reserves

OneBeacon's reserves include provisions made for claims that assert damages from A&E related exposures. Asbestos claims relate primarily to injuries asserted by those who allegedly came in contact with asbestos or products containing asbestos. Environmental claims relate primarily to pollution and related clean-up cost obligations, particularly as mandated by federal and state environmental protection agencies. In addition to the factors described above regarding the reserving process, OneBeacon estimates its A&E reserves based upon, among other factors, facts surrounding reported cases and exposures to claims, such as policy limits and deductibles, current law, past and projected claim activity and past settlement values for similar claims, as well as analysis of industry studies and events, such as recent settlements and asbestos-related bankruptcies. The cost of administering A&E claims, which is an important factor in estimating loss and LAE reserves, tends to be higher than in the case of non-A&E claims due to the higher legal costs typically associated with A&E claims.

A large portion of OneBeacon's A&E losses resulted from the operations of the Employers Group, an entity acquired by one of the legacy companies in 1971. These operations, including business of Employers Surplus Lines Insurance Company and Employers Liability Assurance Corporation, provided primary and excess liability insurance for commercial insureds, including Fortune 500-sized accounts, some of whom subsequently experienced claims for A&E losses. OneBeacon stopped writing such coverage in 1984.

OneBeacon's liabilities for A&E losses from business underwritten in the recent past are substantially limited by the application of exclusionary clauses in the policy language that eliminated coverage for such claims. After 1987 for pollution and 1992 for asbestos, most liability policies contained industry-standard absolute exclusions of such claims. In earlier years, various exclusions were also applied, but the wording of those exclusions was less strict and subsequent court rulings have reduced their effectiveness.

OneBeacon also incurred A&E losses via its participation in industry pools and associations. The most significant of these pools was Excess Casualty Reinsurance Association (ECRA), which provided excess liability reinsurance to U.S. insurers from 1950 until the early 1980s. ECRA incurred significant liabilities for A&E, of which OneBeacon bears approximately a 4.7% share, or \$32 million and \$36 million at December 31, 2010 and 2009, respectively, which is fully reflected in OneBeacon's loss and LAE reserves.

More recently, since the 1990s, OneBeacon has experienced an increase in claims from commercial insureds, including many non-Fortune 500-sized accounts written during the 1970s and 1980s, who are named as defendants in asbestos lawsuits. As a number of large well-known manufacturers of asbestos and asbestos-containing products have gone into bankruptcy, plaintiffs have sought recoveries from peripheral defendants, such as installers, transporters or sellers of such products, or from owners of premises on which the plaintiffs' exposure to asbestos allegedly occurred. At December 31, 2010, 478 policyholders had asbestos-related claims against OneBeacon. In 2010, 103 new insureds with such peripheral involvement presented asbestos claims under prior OneBeacon policies.

Historically, most asbestos claims have been asserted as product liability claims. Recently, insureds who have exhausted the available products liability limits of their insurance policies have sought from insurers such as OneBeacon payment for asbestos claims under the premises and operations coverage of their liability policies, which may not be subject to similar aggregate limits. OneBeacon expects this trend to continue. However, to date there have been fewer of these premises and operations coverage claims than product liability coverage claims. This may be due to a variety of factors, including that it may be more difficult for underlying plaintiffs to establish losses as stemming from premises and operations exposures, which requires proof of the defendant's negligence, rather than products liability under which strict legal liability applies. Premises and operations claims may vary significantly and policyholders may seek large amounts, although such claims frequently settle for a fraction of the initial alleged amount. Accordingly, there is a great deal of variation in damages awarded for the actual injuries. As of December 31, 2010, there were approximately 265 active claims by insureds against OneBeacon without product liability coverage asserting

operations or premises coverage, which may not be subject to aggregate limits under the policies.

OneBeacon has a reinsurance contract with National Indemnity Company (NICO , a subsidiary of Berkshire) under which OneBeacon is entitled to recover from NICO up to \$2.5 billion in the future for asbestos claims arising from business written by OneBeacon in 1992 and prior, environmental claims arising from business written by OneBeacon in 1987 and prior, and certain other exposures, including mass torts. Under the terms of the NICO Cover, NICO receives the economic benefit of reinsurance recoverables from certain of OneBeacon's third-party reinsurers in existence at the time the NICO Cover was executed (Third-Party Recoverables). As a result, the Third-Party Recoverables serve to protect the \$2.5 billion limit of NICO coverage for the benefit of OneBeacon. Any amounts uncollectible from third-party reinsurers due to dispute or the reinsurers' financial inability to pay are covered by NICO under its agreement with OneBeacon. Third-Party Recoverables are typically for the amount of loss in excess of a stated level each year. Of claim payments from 2000 through 2010, approximately 44% of asbestos and environmental losses have been recovered under the historical third-party reinsurance.

Table of Contents

In September 2008, OneBeacon completed a study of its A&E exposures. This study considered, among other items, (1) facts, such as policy limits, deductibles and available third-party reinsurance, related to reported claims; (2) current law; (3) past and projected claim activity and past settlement values for similar claims; (4) industry studies and events, such as recent settlements and asbestos related bankruptcies; and (5) collectibility of third-party reinsurance. Based on the study, OneBeacon increased its best estimate of incurred losses ceded to NICO, net of underlying reinsurance, by \$83 million to \$2.2 billion, which is within the \$2.5 billion coverage provided by the NICO Cover. The increase in the estimate of incurred A&E losses was principally driven by raised projections for claims related to asbestos. Based on the results of the study, OneBeacon believes that, under all reasonable scenarios, ultimate incurred losses will not exceed the NICO Cover. Due to the NICO Cover, there was no impact to income or equity from the change in estimate.

As part of its previously described actuarial review process, OneBeacon reviews A&E activity each quarter and compares that activity to what was assumed in the most recently completed internal study. As of December 31, 2010, OneBeacon noted no change in the range of reasonable outcomes around its best estimate described above.

As noted above, OneBeacon has ceded estimated incurred losses of approximately \$2.2 billion of the coverage provided by NICO at December 31, 2010. Since entering into the NICO Cover, approximately 5% of the \$2.2 billion of utilized coverage relates to uncollected amounts from third-party reinsurers through December 31, 2010. Net losses paid totaled approximately \$1.4 billion as of December 31, 2010, with \$182 million paid in 2010. Asbestos payments during 2010 reflect payments resulting from intensified efforts by claimants to resolve asbestos claims prior to the potential enactment of U.S. federal asbestos legislation. To the extent that OneBeacon's estimate of ultimate A&E losses as well as the estimate and collectibility of Third-Party Recoverables differs from actual experience, the remaining protection under the NICO Cover may be more or less than the approximate \$320 million that OneBeacon estimates remained at December 31, 2010.

OneBeacon's reserves for A&E losses, net of Third-Party Recoverables but prior to NICO recoveries, were \$0.7 billion at December 31, 2010. An industry benchmark of reserve adequacy is the survival ratio, computed as a company's reserves divided by its historical average yearly loss payments. This ratio indicates approximately how many more years of payments the reserves can support, assuming future yearly payments are equal to historical levels. OneBeacon's survival ratio was 10.7 years at December 31, 2010. This was computed as the ratio of A&E reserves, net of Third-Party Recoverables prior to the NICO Cover of \$0.7 billion plus the remaining unused portion of the NICO Cover of \$320 million, to the average A&E loss payments over the three-year period ended December 31, 2010, net of Third-Party Recoverables. OneBeacon's survival ratio was 11.6 years at December 31, 2009. OneBeacon believes that as a result of the NICO Cover and its historical third-party reinsurance programs, OneBeacon should not experience material financial loss from A&E exposures under current coverage interpretations and that its survival ratio compares favorably to industry survival ratios. However, the survival ratio is a simplistic measure estimating the number of years it would be before the current ending loss reserves for these claims would be paid using recent annual average payments. Many factors, such as aggressive settlement procedures, mix of business and coverage provided, have a significant effect on the amount of A&E reserves and payments and the resultant survival ratio. Thus, caution should be exercised in attempting to determine reserve adequacy for these claims based simply on this survival ratio.

OneBeacon's reserves for A&E losses at December 31, 2010 represent management's best estimate of its ultimate liability based on information currently available. Based on this estimate, OneBeacon believes the NICO Cover will be adequate to cover all of its A&E obligations. However, as case law expands, medical and clean-up costs increase and industry settlement practices change, OneBeacon may be subject to A&E losses beyond currently estimated amounts. Therefore, OneBeacon cannot guarantee that its A&E loss and LAE reserves, plus the remaining coverage under the NICO Cover, will be sufficient to cover additional liability arising from any such unfavorable developments. See **Note 3 Reserves for Unpaid Loss and LAE Asbestos and environmental loss and LAE reserve activity** of the accompanying historical consolidated financial statements for more information regarding its A&E reserves.

Table of Contents

OneBeacon A&E Claims Activity

OneBeacon's A&E claim activity for the last two years is illustrated in the table below:

A&E Claims Activity	Year Ended December 31,	
	2010	2009
Asbestos		
Accounts with asbestos claims at the beginning of the year	482	474
Accounts reporting asbestos claims during the year	103	93
Accounts on which asbestos claims were closed during the year	(107)	(85)
Accounts with asbestos claims at the end of the year	478	482
Environmental		
Accounts with environmental claims at the beginning of the year	384	378
Accounts reporting environmental claims during the year	106	131
Accounts on which environmental claims were closed during the year	(137)	(125)
Accounts with environmental claims at the end of the year	353	384
Total		
Total accounts with A&E claims at the beginning of the year	866	852
Accounts reporting A&E claims during the year	209	224
Accounts on which A&E claims were closed during the year	(244)	(210)
Total accounts with A&E claims at the end of the year	831	866

White Mountains Re

The estimation of net reinsurance loss and LAE reserves is subject to the same risk as the estimation of insurance loss and LAE reserves. In addition to those risk factors which give rise to inherent uncertainties in establishing insurance loss and LAE reserves, the inherent uncertainties of estimating such reserves are even greater for the reinsurer, due primarily to: (1) the claim-tail for reinsurers being further extended because claims are first reported to the original primary insurance company and then through one or more intermediaries or reinsurers, (2) the diversity of loss development patterns among different types of reinsurance treaties or facultative contracts, (3) the necessary reliance on the ceding companies for information regarding reported claims and (4) the differing reserving practices among ceding companies.

Loss and LAE Reserves by Class of Business

White Mountains Re's net loss and LAE reserves by class of business at December 31, 2010 and 2009 were as follows:

Net loss and LAE reserves by class of business Millions	December 31, 2010			December 31, 2009		
	Case	IBNR	Total	Case	IBNR	Total
Casualty (excluding A&E)	\$ 189.3	\$ 408.8	\$ 598.1	\$ 180.2	\$ 471.8	\$ 652.0
Other property	180.9	96.7	277.6	189.1	96.4	285.5

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

A&E(1)	55.8	113.8	169.6	48.0	116.5	164.5
Aviation and space	91.2	50.4	141.6	97.0	27.8	124.8

Total	\$ 898.9	\$ 1,091.7	\$ 1,990.6	\$ 815.5	\$ 1,050.6	\$ 1,866.1

-
- (1) White Mountains Re's A&E exposures are predominantly attributable to WMRe America, and are principally the result of run-off of businesses acquired in the 1990s.
- (2) Included in this class is primarily the run-off exposures from various acquisitions.

As with insurance reserves, the process of estimating reinsurance reserves involves a considerable degree of judgment by management and, as of any given date, is inherently uncertain. Based on the above, such uncertainty may be larger relative to the reserves for a company that principally writes reinsurance compared to an insurance company, and certainty may take a longer time to emerge.

Table of Contents

In order to reduce the potential uncertainty of loss reserve estimation, White Mountains Re obtains information from numerous sources to assist in the process. White Mountains Re's underwriting and pricing actuaries devote considerable effort to understanding and analyzing each insured's operations and loss history during the underwriting of the business, using a combination of insured and industry statistics. Such statistics normally include historical premium and loss data by class of business, individual claim information for larger claims, distributions of insurance limits provided, loss reporting and payment patterns, and rate change history. This analysis is used to project expected loss ratios for each treaty during the upcoming contract period. These expected ultimate loss ratios are aggregated across all treaties and are input directly into the loss reserving process to generate the expected loss ratios that are used to estimate IBNR.

Upon notification of a loss from an insured (typically a ceding company), White Mountains Re establishes case reserves, including LAE reserves, based upon White Mountains Re's share of the amount of reserves established by the insured and White Mountains Re's independent evaluation of the loss. In cases where available information indicates that reserves established by a ceding company are inadequate, White Mountains Re establishes case reserves or IBNR in excess of its share of the reserves established by the ceding company. In addition, specific claim information reported by insureds or obtained through claim audits can alert management to emerging trends such as changing legal interpretations of coverage and liability, claims from unexpected sources or classes of business, and significant changes in the frequency or severity of individual claims where customary. Generally, ceding company audits are not customary outside the United States. This information is often used to supplement estimates of IBNR.

Although loss and LAE reserves are initially determined based on underwriting and pricing analyses, White Mountains Re regularly reviews the adequacy of its recorded reserves by using a variety of generally accepted actuarial methods, including historical incurred and paid loss development methods. If actual loss activity differs substantially from expectations, an adjustment to recorded reserves may be warranted. As time passes, loss reserve estimates for a given year will rely more on actual loss activity and historical patterns than on initial assumptions based on pricing indications.

White Mountains Re's expected annual loss reporting assumptions are updated at least once a year. These assumptions are applied to year-end IBNR to generate expected reported losses for the subsequent year. Interpolation methods are applied to estimate quarterly reported losses, which are then compared to actual reported losses each quarter. Significant differences may result in a change in estimates or a revision in the estimated loss reporting pattern. Expected loss ratios underlying the current accident year are updated quarterly, to reflect new business that is underwritten by the company.

As mentioned above, there can be a considerable time lag from the time a claim is reported to a ceding company to the time it is reported to the reinsurer. The lag can be several years in some cases. This lag can be due to a number of reasons, including the time it takes to investigate a claim, delays associated with the litigation process, the deterioration in a claimant's physical condition many years after an accident occurs, etc. In its loss reserving process, White Mountains Re assumes that such lags are predictable, on average, over time and therefore the lags are contemplated in the loss reporting patterns used in its actuarial projection methods. This means that, as a reinsurer, White Mountains Re must rely on such actuarial estimates for a longer period of time after reserves are first estimated than does a primary insurance company.

Backlogs in the recording of assumed reinsurance can also complicate the accuracy of loss reserve estimation. As of December 31, 2010, there were no significant backlogs related to the processing of assumed reinsurance information at White Mountains Re.

White Mountains Re relies heavily on information reported by ceding companies, as discussed above. In order to determine the accuracy and completeness of such information, White Mountains Re underwriters, actuaries, and claims personnel perform audits of certain ceding companies where customary. Generally, ceding company audits are not customary outside the United States. In such cases, White Mountains Re

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

reviews information from ceding companies for unusual or unexpected results. Any material findings are discussed with the ceding companies. White Mountains Re sometimes encounters situations where it is determined that a claim presentation from a ceding company is not in accordance with contract terms. Most situations are resolved amicably and without the need for litigation or arbitration. However, in the infrequent situations where a resolution is not possible, White Mountains Re will vigorously defend its position in such disputes.

White Mountains Re also obtains reinsurance whereby another reinsurer contractually agrees to indemnify White Mountains Re for all or a portion of the risks underwritten by White Mountains Re. Such arrangements, where one reinsurer provides reinsurance to another reinsurer, are usually referred to as retrocessional reinsurance arrangements. White Mountains Re establishes estimates of amounts recoverable from retrocessional reinsurance in a manner consistent with the loss and LAE liability associated with reinsurance contracts offered to its customers, net of an allowance for uncollectible amounts, if any. Net reinsurance loss reserves represent loss and LAE reserves reduced by ceded reinsurance recoverable on unpaid losses.

Table of Contents

In 2010, White Mountains Re had net favorable loss reserve development of \$57 million, primarily related to short-tailed lines, such as property, accident & health and marine, in recent underwriting years. Included in the \$57 million favorable loss reserve development was the recognition of \$16 million in deferred gains from a retrocessional reinsurance contract that inceptioned in 2000 and was fully collected in 2010. In 2009, White Mountains Re recorded \$30 million of net favorable loss reserve development due mainly to a \$20 million cession under a retrocessional contract related to the 2001 accident year (substantially offset in the combined ratio and pre-tax income by \$10 million of retroceded premiums as well as \$7 million of interest charges on funds held under the contract) and favorable commutation activity on certain old casualty treaties, partially offset by \$18 million of loss reserve additions related to A&E exposures.

In the first quarter of 2008, White Mountains Re recorded \$41 million of adverse loss reserve development related principally to WMRe America's construction defect exposed accounts from underwriting years 2001 and prior. As a result of the first quarter reserve development, in the second quarter of 2008 management performed a comprehensive loss Reserve Review. The Reserve Review was conducted by management, including internal underwriting, claims and actuarial personnel, with assistance from external consultants. The Reserve Review included all of WMRe America's non-A&E casualty loss reserves as well as certain lines of business at WMRe Sirius. The Reserve Review resulted in \$140 million of additional adverse loss reserve development at WMRe America, partially offset by \$85 million of favorable loss reserve development at WMRe Sirius. The adverse loss reserve development at WMRe America was predominantly attributable to its casualty reinsurance book written in the 1996-2002 underwriting years, whereas the favorable loss reserve development at WMRe Sirius was mainly attributable to its property reinsurance book. In total, for 2008, White Mountains Re recorded \$80 million of adverse loss development.

The actuarial methods described above are used to calculate a point estimate of loss and LAE reserves for each company within White Mountains Re. These point estimates are then aggregated to produce an actuarial point estimate for the entire segment. Once a point estimate is established, White Mountains Re's actuaries estimate loss reserve ranges to measure the sensitivity of the actuarial assumptions used to set the point estimates. These ranges are calculated from historical variations in loss ratios, payment and reporting patterns by class and type of business.

The actuarial analysis is a primary consideration for management in determining its best estimate of loss and LAE reserves. In making its best estimate, management also considers other qualitative factors that may lead to a difference between its best estimate of loss and LAE reserves and the actuarial point estimate. Typically, these factors exist when management and the company's actuaries conclude that there is insufficient historical incurred and paid loss information or that trends included in the historical incurred and paid loss information are unlikely to repeat in the future. These factors may include, among others, changes in the techniques used to assess underwriting risk, more accurate and detailed levels of data submitted with reinsurance applications, the uncertainty of the current reinsurance pricing environment, the level of inflation in loss costs, changes in ceding company reserving practices, and legal and regulatory developments. At December 31, 2010 and 2009, total carried reserves were 2.6% and 1.4% above the actuarial point estimate, respectively.

The following table illustrates White Mountains Re's recorded net loss and LAE reserves and high and low estimates for those classes of business for which a range is calculated, at December 31, 2010.

Net loss and LAE reserves by class of business Millions	December 31, 2010		
	Low	Recorded	High
Casualty (excluding A&E)	\$ 531	\$ 598.1	\$ 624
Other property	257	277.6	299
A&E	152	169.6	183
Aviation and space	131	141.6	151
Property catastrophe excess	151	179.2	179
Accident & health	101	108.6	117

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

Agriculture	11	11.3	12
Marine	111	120.1	129
Contingency	6	6.3	7
Trade Credit	58	68.0	68
Run-off	234	310.2	330
Total	\$ 1,743	\$ 1,990.6	\$ 2,099

The probability that ultimate losses will fall outside of the range of estimates by class of business is higher for each class of business individually than it is for the sum of the estimates for all classes taken together due to the effects of diversification. Management believes that it is reasonably likely that actual ultimate losses will fall within the total range noted above because the ranges were developed by using generally accepted actuarial methods supplemented with input of underwriting and claims staff. However, due to the inherent uncertainty, ultimate losses may deviate, perhaps materially, from the recorded reserve amounts and could be above or below the range of actuarial projections.

Table of Contents*White Mountains Re A&E Reserves*

White Mountains Re's A&E exposure is primarily from reinsurance contracts written between 1974 through 1985 by companies acquired by WMRe America (MONY Reinsurance Company and Christiania General Insurance Company). The exposures are mostly higher layer excess of loss treaty and facultative coverages with relatively low limits exposed for each claim. WMRe America has a specialized unit that handles claims relating to A&E exposures. The issues presented by these types of claims require specialization, expertise and an awareness of the various trends and developments in relevant jurisdictions. Net incurred loss activity for asbestos and environmental in the last two years was as follows:

Net incurred loss and LAE activity Millions	Year Ended December 31,	
	2010	2009
Asbestos	\$ 7.3	\$ 18.4
Environmental	(1.3)	(.7)
Total	\$ 6.0	\$ 17.7

In 2010 and 2009, White Mountains Re recorded \$7 million and \$18 million of asbestos-related IBNR losses and LAE. The 2010 addition to asbestos related IBNR occurred in the first half of 2010 prior to the in-depth analysis addressed below. These increases were the result of management's monitoring of a variety of metrics including: actual paid and reported claims activity; net survival ratios; peer comparisons; and industry benchmarks. In each of 2010 and 2009, White Mountains Re recorded \$(1) million of environmental losses.

In the third quarter 2010, WMRe America completed an in-depth analysis of its asbestos exposure, which was an update to the 2007 asbestos study described below. The main focus of the analysis was on the internal claims analysis of all treaty and facultative contracts likely to have asbestos exposure at June 30, 2010. This analysis entailed examining total expected asbestos losses and LAE from a variety of information sources, including asbestos studies, data reported to WMRe America and external benchmarking scenarios. The combined effect of all these estimates resulted in no further increase in IBNR for asbestos losses and LAE as a result of the 2010 in-depth analysis.

In 2007, White Mountains Re completed a detailed, ground-up asbestos exposure study. The study analyzed potential exposure to loss of all insureds that had reported at least \$250,000 in losses to WMRe America through reinsurance contracts as of June 30, 2007 and a significant sample of all other insureds that had reported losses of less than \$250,000, whose sample findings were extrapolated to the entire population. The combined effect of all these estimates resulted in an increase of \$52 million in IBNR for asbestos losses and LAE in 2007.

White Mountains Re's net reserves for A&E losses were \$170 million and \$165 million at December 31, 2010 and 2009, respectively. White Mountains Re's A&E three-year net losses paid survival ratio was approximately 12.5 years at December 31, 2010 and 12.3 years at December 31, 2009.

The following tables show gross and net loss and LAE payments for A&E exposures for the years ending December 31, 2002 through December 31, 2010:

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

Millions Year ended December 31,	Asbestos paid loss and LAE		Environmental paid loss and LAE	
	Gross	Net	Gross	Net
2002	\$ 5.9	\$ 4.5	\$ 3.2	\$ 2.9
2003	10.7	7.4	1.7	1.1
2004	19.3	14.3	1.5	1.4
2005	11.7	12.2	4.8	4.0
2006	9.8	7.9	.6	.5
2007	12.3	10.7	2.0	1.7
2008	19.7	14.3	2.2	1.6
2009	11.4	10.3	1.5	1.5
2010	14.5	12.1	.8	.9

White Mountains Re A&E Claims Activity

Generally, White Mountains Re sets up claim files for each reported claim by each cedent for each individual insured. In many instances, a single claim notification from a cedent could involve several years and layers of coverage resulting in a file being set up for each involvement. Precautionary claim notices are submitted by the ceding companies in order to preserve their right to pursue coverage under the reinsurance contract. Such notices do not contain an incurred loss amount. Accordingly, an open claim file is not established. As of December 31, 2010, White Mountains Re had 1,223 open claim files for asbestos and 268 open claim files for environmental exposures.

Table of Contents

White Mountains Re's A&E claim activity for the last two years is illustrated in the table below.

A&E Claims Activity	Year ended December 31,	
	2010	2009
Asbestos		
Total asbestos claims at the beginning of the year	1,158	1,213
Asbestos claims - Central National acquisition	17	
Asbestos claims reported during the year	229	199
Asbestos claims closed during the year	(181)	(254)
Total asbestos claims at the end of the year	1,223	1,158
Environmental		
Total environmental claims at the beginning of the year	252	281
Environmental claims - Central National acquisition	9	
Environmental claims reported during the year	60	52
Environmental claims closed during the year	(53)	(81)
Total environmental claims at the end of the year	268	252
Total		
Total A&E claims at the beginning of the year	1,410	1,494
A&E claims - Central National acquisition	26	
A&E claims reported during the year	289	251
A&E claims closed during the year	(234)	(335)
Total A&E claims at the end of the year	1,491	1,410

The costs associated with administering the underlying A&E claims by White Mountains Re's clients tend to be higher than non-A&E claims due to generally higher legal costs incurred by ceding companies in connection with A&E claims ceded to White Mountains Re under the reinsurance contracts.

Esurance

Esurance establishes loss and LAE reserves that are estimates of amounts needed to pay claims and related expenses in the future for insured events that have already occurred. The process of estimating reserves involves a considerable degree of judgment by management and, as of any given date, is inherently uncertain.

After reviewing the indications from a variety of commonly accepted actuarial methods, Esurance actuaries select an indicated reserve level for each accident period, which is the primary consideration in determining management's best estimate of required reserves. However, in making its best estimate, management also considers other qualitative factors that may lead to a difference between held reserves and actuarially recommended levels. Such factors may include, among others, improvements in the claims department, regulatory developments, level of inflation in loss costs, and legislative or legal changes. At both December 31, 2010 and 2009, total carried reserves were 3% above the actuarial point estimate.

Loss and LAE Reserves by Class of Business

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

Esurance's net loss and LAE reserves by class of business at December 31, 2010 and 2009 were as follows:

Net loss and LAE reserves by class of business Millions	December 31, 2010			December 31, 2009		
	Case	IBNR	Total	Case	IBNR	Total
Personal auto liability	\$ 214.7	\$ 197.9	\$ 412.6	\$ 205.8	\$ 186.6	\$ 392.4
Personal auto physical damage	13.0	(8.3)	4.7	17.3	(6.3)	11.0
Total	\$ 227.7	\$ 189.6	\$ 417.3	\$ 223.1	\$ 180.3	\$ 403.4

Table of Contents

Esurance writes private passenger auto coverages whose risk factors expose its reserves to significant variability. This variability is magnified by the claim-tail, the time lag between when a claim actually occurs and when it is settled. The claim-tail is typically short for physical damage coverages (usually a few days up to a few months), but it is significantly longer for liability coverages as claims are often settled years after the loss occurs. This claim-tail differs by state due to varying statutes of limitation. For example, California has a 2 year statute of limitation, whereas New York allows claims to be reported up to 6 years following the date of loss for various coverages. These statewide differences in the claim-tail have led to increased uncertainty in establishing loss and LAE reserves as Esurance has experienced significant growth over the years, and the growth rate has not been uniform by state. Esurance's growth in written premiums, the relatively limited historical experience of Esurance's current book of business, rapid growth in personnel in the claims department, and case reserving changes by the claims department increase the variability of Esurance's reserves. The absence of other risk factors from those described above does not imply that additional factors will not be identified in the future as having significant influence on Esurance's reserves.

The following table illustrates Esurance's recorded net loss and LAE reserves and high and low estimates at December 31, 2010.

Net loss and LAE reserves by class of business Millions	December 31, 2010		
	Low	Recorded	High
Personal auto liability	\$ 372	\$ 412.6	\$ 431
Personal auto physical damage	3	4.7	7
Total	\$ 375	\$ 417.3	\$ 438

The recorded reserves represent management's best estimate of unpaid loss and LAE by line of business. Esurance uses the results of several different actuarial methods to develop its estimate of ultimate reserves. Esurance believes that it is reasonably likely that actual ultimate paid losses will fall within the ranges noted above because the ranges were developed by using several different generally accepted actuarial methods. However, due to the inherent uncertainty, ultimate losses may deviate, perhaps materially, from the recorded reserve amounts and could be above or below the range of actuarial projections.

2. Fair Value Measurements

General

On January 1, 2008, White Mountains adopted ASC 820-10, Fair Value Measurements. ASC 820-10 provides a revised definition of fair value, establishes a framework for measuring fair value and expands financial statement disclosure requirements for fair value information. Fair value is defined as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants (an exit price) at a particular measurement date. The Statement establishes a fair value hierarchy that distinguishes between inputs based on market data from independent sources (observable inputs) and a reporting entity's internal assumptions based upon the best information available when external market data is limited or unavailable (unobservable inputs). The fair value hierarchy prioritizes fair value measurements into three levels based on the nature of the inputs. Quoted prices in active markets for identical assets have the highest priority (Level 1), followed by observable inputs other than quoted prices including prices for similar but not identical assets or liabilities (Level 2), and unobservable inputs, including the reporting entity's estimates of the assumptions that market participants would use, having the lowest priority (Level 3).

White Mountains carries certain financial instruments at fair value with changes therein recognized in earnings. Assets and liabilities carried at fair value include substantially all of the investment portfolio; derivative instruments, both exchange traded and over the counter instruments;

and reinsurance assumed liabilities associated with variable annuity benefit guarantees. Valuation of assets and liabilities measured at fair value require management to make estimates and apply judgment to matters that may carry a significant degree of uncertainty. In determining its estimates of fair value, White Mountains uses a variety of valuation approaches and inputs. Whenever possible, White Mountains estimates fair value using valuation methods that maximize the use of observable prices and other inputs. Where appropriate, assets and liabilities measured at fair value have been adjusted for the effect of counterparty credit risk.

Table of Contents**Invested Assets**

White Mountains' invested assets measured at fair value include fixed maturity securities, common and preferred equity securities, convertible fixed maturity securities and interests in hedge funds and private equity funds.

Where available, the estimated fair value of investments is based upon quoted prices in active markets. In circumstances where quoted prices are unavailable, White Mountains uses fair value estimates based upon other observable inputs including matrix pricing, benchmark interest rates, market comparables, and other relevant inputs. Where observable inputs are not available, the estimated fair value is based upon internal pricing models using assumptions that include inputs that may not be observable in the marketplace but which reflect management's best judgment given the circumstances and consistent with what other market participants would use when pricing such instruments.

As of December 31, 2010, approximately 94% of the investment portfolio recorded at fair value was priced based upon quoted market prices or other observable inputs. Investments valued using Level 1 inputs include fixed maturities, primarily investments in U.S. Treasuries, common equities and short-term investments, which include U.S. Treasury Bills. Investments valued using Level 2 inputs comprise fixed maturities including corporate debt, state and other governmental debt, convertible fixed maturity securities and mortgage and asset-backed securities. Fair value estimates for investments that trade infrequently and have few or no observable market prices are classified as Level 3 measurements. Level 3 fair value estimates based upon unobservable inputs include White Mountains' investments in hedge funds and private equity funds, as well as investments in debt securities, including certain asset-backed securities, where quoted market prices are unavailable. White Mountains uses brokers and outside pricing services to assist in determining fair values. For investments in active markets, White Mountains uses the quoted market prices provided by the outside pricing service to determine fair value. The outside pricing services used by White Mountains have indicated that they will only provide prices where observable inputs are available. White Mountains' process to validate the market prices obtained from the outside pricing sources includes, but is not limited to, periodic evaluation of model pricing methodologies and monthly analytical reviews of certain prices. White Mountains also periodically performs back-testing of selected sales activity to determine whether there are any significant differences between the market price used to value the security prior to sale and the actual sale price.

White Mountains' investments in debt securities, including asset-backed securities, are generally valued using matrix and other pricing models. Key inputs include benchmark yields, benchmark securities, reported trades, issuer spreads, bids, offers, credit ratings and prepayment speeds.

The following table summarizes White Mountains' fair value measurements and the percentage of Level 3 investments at December 31, 2010:

Millions	December 31, 2010		Level 3 Inputs as a % of total fair value
	Fair value	Level 3 Inputs	
US Government and agency obligations	\$ 409.1	\$	%
Debt securities issued by industrial corporations	2,358.0	.6	
Municipal obligations	4.3		
Mortgage-backed and asset-backed securities	2,472.3	65.8	2.7
Foreign government, agency and provincial obligations	1,046.5		
Preferred stocks	89.7	71.4	79.6
Fixed maturities	6,379.9	137.8	2.2
Common equity securities	710.0	71.2	10.0

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

Convertible fixed maturity investments	160.2			
Short-term investments	1,106.3			
Other long-term investments (1)	334.2		334.2	100.0
Total investments	\$ 8,690.6	\$	543.2	6.3%

(1) Excludes carrying value of \$41.9 associated with other long-term investments accounted for using the equity method.

Table of Contents

White Mountains uses quoted market prices where available as the inputs to estimate fair value for its investments in active markets. Such measurements are considered to be either Level 1 or Level 2 measurements, depending on whether the quoted market price inputs are for identical securities (Level 1) or similar securities (Level 2). Level 3 measurements for fixed maturities at December 31, 2010 comprise securities for which the estimated fair value has not been determined based upon quoted market price inputs for identical or similar securities.

The following table summarizes the changes in White Mountains fair value measurements by level for the year ended December 31, 2010:

Millions	Level 3 Investments						Total
	Level 1 Investments	Level 2 Investments	Fixed Maturities	Common equity securities	Convertible fixed maturities	Other long-term investments	
Balance at January 1, 2010	\$ 3,211.8	\$ 5,434.1	\$ 119.1	\$ 122.2	\$	\$ 325.6	\$ 9,212.8
Total realized and unrealized gains (losses)(1)	125.5	46.0	5.7	(6.6)		32.4	203.0
Amortization/Accretion	1.2	(41.7)	(1.6)				(42.1)
Purchases(2)	19,983.2	5,955.7	81.9	.2		65.4	26,086.4
Sales	(21,248.6)	(5,361.8)	(25.3)	(44.6)		(104.2)	(26,784.5)
Transfers in	5.6	51.4	9.4			15.0	81.4
Transfers out		(15.0)	(51.4)				(66.4)
Balance at December 31, 2010	\$ 2,078.7	\$ 6,068.7	\$ 137.8	\$ 71.2	\$	\$ 334.2	\$ 8,690.6

- (1) Includes unrealized foreign exchange gains and losses recognized as a component of other comprehensive income in reporting currency translation.
- (2) Includes investments acquired as part of the Central National acquisition.

Fair Value Measurements transfers between levels

Transfers between levels are recorded using the fair value measurement as of the end of the quarterly period in which the event or change in circumstance giving rise to the transfer occurred.

Transfers into Level 3 other long-term investments of \$15.0 million represent the deconsolidation of White Mountains investment in Tuckerman Fund II due to the adoption of revisions to the guidance for variable interest entities under ASU 2009-17 (see **Note 1**). In addition, during the 2010, five securities which had been classified as Level 3 measurements in prior periods were recategorized as Level 2 measurements because quoted market prices for similar securities that were considered reliable and could be validated against an alternative source were available at December 31, 2010. These measurements consist of Transfers out of \$51.4 million in fixed maturities for the period ended December 31, 2010. A security that was classified as a Level 2 investment in prior periods was priced with unobservable inputs during the current period and represents the transfers in of \$9.4 million in Level 3 investments. The fair value of this security was estimated using industry standard pricing models, in which management selected inputs using its best judgment. These inputs principally included benchmark yields, benchmark securities, reported trades, issuer spreads, bids, offers, credit ratings and prepayment speeds. The pricing models used by White Mountains use the same valuation methodology for all Level 3 measurements for fixed maturities. The security is considered to be Level 3 because the measurements are not directly observable. At December 31, 2010, the estimated fair value for this securities determined using the industry standard pricing models was \$1.2 million more than the estimated fair value based upon quoted prices provided by a third party. One security that was classified as a Level 2 investment in the prior periods due to restrictions on selling the security was transferred to a Level 1 investment when the restrictions lapsed during the year. This represents the Transfers In of \$5.6 million within Level 1 investments.

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

The following table summarizes the amount of total gains (losses) included in earnings attributable to unrealized investment gains (losses) for Level 3 investments for years ended December 31, 2010, 2009, and 2008:

Millions	Year Ended December 31,		
	2010	2009	2008
Fixed maturities	\$ 10.2	\$ 47.3	\$ (60.8)
Common equity securities	(19.2)	14.7	(16.7)
Convertible fixed maturities		.1	
Other long-term investments	39.0	65.0	(161.4)
Total unrealized investment gains (losses), pre-tax - Level 3 investments	\$ 30.0	\$ 127.1	\$ (238.9)

Table of Contents

Symetra Warrants

White Mountains holds warrants to acquire common shares of Symetra. The warrants are recorded at fair value. White Mountains uses a Black-Scholes valuation model to determine the fair value of the Symetra warrants. The major assumptions used in valuing the Symetra warrants at December 31, 2010 were a risk-free rate of 1.29%, volatility of 25%, an expected life of 3.58 years, a strike price of \$11.49 per share and a share price of \$13.70 per share. Symetra's warrants are not publicly traded. Accordingly, the fair value measurement of the warrants is based on observable and unobservable inputs. Due to an insufficient history of Symetra's volatility, it is classified as a Level 3 measurement.

Other Long-Term Investments

Other long-term investments accounted for at fair value at December 31, 2010 are comprised of \$160 million in hedge funds and \$160 million in private equity funds. At December 31, 2010, all of White Mountains' investments in hedge funds and private equity funds that were included in other long-term investments were in the form of limited partnership and limited liability corporation interests. At December 31, 2010, White Mountains held limited partnership and limited liability corporation investments in 18 hedge funds and 34 private equity funds. The largest investment in a single fund was \$49 million at December 31, 2010.

The fair value of White Mountains' investments in hedge funds and private equity funds is based upon White Mountains' proportionate interest in the underlying fund's net asset value, which is deemed to approximate fair value. White Mountains employs a number of procedures to assess the reasonableness of the fair value measurements for its other long-term investments including obtaining and reviewing each fund's audited financial statements and discussing each fund's pricing with the fund's manager. However, since the fund managers do not provide sufficient information to independently evaluate the pricing inputs and methods for each underlying investment, the inputs are considered to be unobservable. Accordingly, the fair values of White Mountains' investments in hedge funds and private equity funds have been classified as Level 3.

In circumstances where the underlying investments are publicly traded, such as the investments made by hedge funds, the fund manager uses current market prices to determine fair value. In circumstances where the underlying investments are not publicly traded, such as the investments made by private equity funds, the private equity fund managers have considered the need for a liquidity discount on each of the underlying investments when determining the fund's net asset value. In circumstances where White Mountains' portion of a fund's net asset value is deemed to differ from fair value due to illiquidity or other factors associated with White Mountains' investment in the fund, the net asset value is adjusted accordingly. At December 31, 2010, White Mountains did not record an adjustment to the net asset value related to its investments in hedge funds or private equity funds.

Sensitivity analysis of likely returns on hedge fund and private equity fund investments

White Mountains' investment portfolio includes investments in hedge funds and private equity funds. At December 31, 2010, the value of investments in hedge funds and in private equity funds was \$160 million and \$160 million, respectively. The underlying investments are typically publicly traded and private common equity investments, and, as such, are subject to market risks that are similar to White Mountains' common equity securities. The following illustrates the estimated effect on December 31, 2010 fair value resulting from a 10% change and a 30% change in market value:

Millions	December 31, 2010							
	Change in fair value				Change in fair value			
	10% decline		10% increase		30% decline		30% increase	
Hedge funds	\$	(16.0)	\$	16.0	\$	(48.0)	\$	48.0
Private equity funds	\$	(16.0)	\$	16.0	\$	(48.0)	\$	48.0

Hedge fund and private equity fund returns are commonly measured against the benchmark returns of hedge fund indices and/or the S&P 500 Index. The historical returns for each index in the past 5 full years are listed below:

	Year Ended December 31,				
	2010	2009	2008	2007	2006
HFRX Equal Weighted Strategies Index	5.3%	11.4%	-21.9%	4.0%	8.8%
S&P 500 Index	15.1%	26.5%	-37.0%	5.5%	15.8%

Table of Contents

Valuation of Variable Annuity Reinsurance Liabilities

White Mountains has entered into agreements to reinsure death and living benefit guarantees associated with certain variable annuities in Japan. White Mountains carries the benefit guarantees at fair value. The fair value of the guarantees is estimated using actuarial and capital market assumptions related to the projected discounted cash flows over the term of the reinsurance agreement. The valuation uses assumptions about surrenders rates, market volatilities and other factors, and includes a risk margin which represents the additional compensation a market participant would require to assume the risks related to the business. The selection of surrender rates, market volatility assumptions, risk margins and other factors require the use of significant management judgment. Assumptions regarding policyholder behavior, including surrender and lapse rates, are generally unobservable inputs and significantly impact the fair value estimate. The cost of reinsuring these benefit guarantees may be greater than expected. Market conditions including, but not limited to, changes in interest rates, equity indices, market volatility and foreign currency exchange rates as well as variations in actuarial assumptions regarding policyholder behavior may result in significant fluctuations in the fair value of the liabilities associated with these guarantees that could materially affect results of operations. All of White Mountains' variable annuity reinsurance liabilities (\$610 million) were classified as Level 3 measurements at December 31, 2010.

Generally, the liabilities associated with these guarantees increase with declines in the equity markets, interest rates and currencies against the Japanese yen, as well as with increases in market volatilities. In 2008, particularly in the fourth quarter, as a result of worldwide declines in equity markets, interest rates and the strengthening of the Japanese yen, the underlying investment accounts declined substantially. The collective account values were approximately 82% and 88% of the guarantee value at December 31, 2010 and December 31, 2009. The liability is also affected by annuitant related behavioral and actuarial assumptions, including surrender and mortality rates. WM Life Re significantly lowered its projected surrender rates in 2010, 2009 and 2008 to reflect the behavior observed during the turbulent markets experienced throughout those years.

WM Life Re uses derivative instruments, including put options, interest rate swaps, total return swaps on bond indices and forwards and futures contracts on major equity indices, currency pairs and government bonds, to mitigate the risks associated with changes in the fair value of the reinsured variable annuity guarantees. The types of inputs used to estimate the fair value of these derivative instruments, with the exception of actuarial assumptions regarding policyholder behavior and risk margins, are generally the same as those used to estimate the fair value of the variable annuity liabilities.

During 2009 and 2010, WM Life Re has made modifications and adjustments to improve the effectiveness of its economic hedging program. These changes have improved the expected effectiveness of WM Life Re's economic hedging program during normal market conditions but have not had a significant impact on the shock analyses presented on pages 91 and 92.

In 2009, WM Life Re entered into long term Japanese interest rate swaps, largely replacing its use of short term Japanese Government Bond (JGB) futures to hedge its discount rate exposure. By doing so, WM Life Re has better matched the term structure of its discount rate exposure, substantially reduced its exposure to changes in swap spreads and significantly reduced the potential costs associated with rolling JGB futures contracts during times of relative market illiquidity. As of December 31, 2010, the notional amount of interest rate swaps was ¥163 billion (\$2 billion).

In December 2009, to more closely hedge the performance of bond funds tracking the WGBI, WM Life Re entered into a series of total return swap contracts on the performance of the WGBI. As of December 31, 2010, the value of bond funds tracking the WGBI was approximately ¥66 billion (\$817 million) and the total notional amount of WGBI swaps was \$350 million. Under the contracts, WM Life Re receives cash flows based on a fixed return, reset at the beginning of each month based on current LIBOR and is required to pay cash flows based on the

performance of the WGBI during that month plus a fixed amount. The total return swaps reduce WM Life Re's hedging basis risk (i.e., the risk that changes in the WGBI will cause WM Life Re's variable annuity guarantee liabilities to change in value at a different rate than the derivative hedges) by matching the WGBI returns precisely, although WM Life Re must continue to hedge the results into Japanese yen to match the benchmark denominated in Japanese yen. Approximately 49% and 72% of WM Life Re's WGBI-related liability exposure was hedged with WGBI swaps at December 31, 2010 and December 31, 2009, respectively. The decrease in coverage was due primarily to the substantial weakening of the U.S. dollar versus the Japanese yen, as the WGBI swaps are denominated in U.S. dollars. Also, there was a net \$50 million decrease in notional value of WGBI swaps during 2010 as \$100 million matured and \$50 million of new swaps were entered into. The market for WGBI swaps continues to be illiquid and, while WM Life Re continues to look for counterparties to increase its coverage and replace swaps as they mature, there is no guaranty that WM Life Re will be able to do so.

WM Life Re hedges the remaining 51% of WGBI-related liability exposure with the limited types of available, liquid interest rate derivatives that most closely fit the country and term exposures of the WGBI. The recent market introductions of certain bond futures for countries heretofore not available (for example, Italy) and different tenors (for example, the U.S. ultra long bond) have assisted in better matching WM Life Re's exposure.

Table of Contents

In January 2010, because the types and tenors of liquid Japanese bond futures currently available are extremely limited, to more closely track the performance of bond funds tracking the Nomura BPI, WM Life Re entered into its first total return swap contract on the performance of that index. As of December 31, 2010, the value of bond funds tracking the Nomura BPI was approximately ¥71.1 billion (\$877 million) and the total notional amount of Nomura BPI swaps was ¥8.75 billion (\$108 million), equating to approximately 16% of WM Life Re's Nomura BPI-related liability exposure. Under the contract, WM Life Re receives cash flows based on a fixed return, reset at the beginning of each month based on current LIBOR and is required to pay cash flows based on the performance of the Nomura BPI during that month plus a fixed amount. The swap had an initial term of 1 year and matured in February 2011. WM Life Re continues to look for opportunities to replace this swap when it matures, as well as increase its coverage; however, the market is extremely illiquid and there is no guaranty that WM Life Re will be able to do so.

In 2010, WM Life Re has also entered into forward contracts on longer duration Japan government bonds with a notional amount of ¥6.5 billion (\$80 million) to better match the term structure of the Nomura BPI. Remaining Nomura BPI exposure is hedged with liquid Japanese bond futures and is subject to basis risk relating to the difference between the tenor of the bond futures and the tenor of the assets in the annuity funds covered by its variable annuity guarantees. WM Life Re continues to evaluate other mechanisms to manage the risk associated with its exposures on the benefit guarantee liabilities.

The following table summarizes the estimated financial impact on WM Life Re's derivatives and benefit guarantee liabilities of instantaneous changes in individual market variables as of December 31, 2010. The table below assumes that all other market variables are constant and does not reflect the inter-dependencies between individual variables.

Millions	Equity Market Returns		Foreign Currency Exchange (1)		Interest Rates(2)		Market Volatility(3)	
	+20%	-20%	+15%	-15%	Favorable	Unfavorable	Decrease	Increase
Liabilities	(119)	127	(219)	267	(99)	66	(8)	14
Hedge Assets	(117)	124	(203)	235	(92)	63	(17)	22
Net	2	(3)	16	(32)	7	(3)	(9)	8

(1) The value of foreign currencies in Japanese yen terms.

(2) In the unfavorable scenario, Japanese interest rates are decreased 70 bps, Japanese swap spreads are tightened by 25 bps, and foreign bond fund yields are increased 70 bps. Conversely, in the favorable scenario, Japanese interest rates are increased 70 bps, Japanese swap spreads are widened 24 bps and foreign bond fund yields are decreased 70 bps.

(3) White Mountains' sensitivities for market implied volatilities vary by term. For equity implied volatilities, White Mountains changes implied volatilities by 15%, 13%, 11%, 9%, 7% and 7% for each of the terms to maturity for years one through six, respectively. For foreign currency implied volatilities, White Mountains changes implied volatilities by 6%, 5.5%, 5%, 4.5%, 4% and 4% for each of the terms to maturity for years one through six, respectively.

To test the impact of multiple variables moving simultaneously, WM Life Re performs capital market shock testing. Prior to 2009, in performing this testing, WM Life Re had not incorporated basis risk and other hedge underperformance relative to expectations in its models; it had assumed that its hedges would behave as modeled. However, the financial market turmoil of late 2008 and early 2009 demonstrated that, in periods of severe financial market disruption, various aspects of WM Life Re's hedging program may underperform or over-perform. As a result, WM Life Re now also estimates the efficacy of its hedging program in its shock testing. Estimated hedge effectiveness is based on actual results during the recent stressed market environment encompassing the fourth quarter of 2008 and the first quarter of 2009. Hedge effectiveness assumptions

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

also incorporate any subsequent changes to the hedging program that were not in place during this stress period. Although this period captures a historically volatile period that included large market movements over short time periods, hedges may be less effective than the current assumptions to the extent future market movements of the magnitude of these shocks occur more quickly than during this recent stress period.

The table below summarizes as of December 31, 2010 and 2009 the estimated financial impact of simultaneous market events. Unlike the individual sensitivity analyses illustrated above, the analysis in the table below reflects the inter-dependencies between individual variables.

Change in Millions	As of December 31, 2010		As of December 31, 2009	
	Down Market	Up Market	Down Market	Up Market
Liabilities	\$ 486	\$ (419)	\$ 444	\$ (327)
Hedge Assets (1)	433	(440)	391	(350)
Net	\$ (53)	\$ (21)	\$ (53)	\$ (23)

(1) Assumed hedge effectiveness in down and up markets of 89% and 105%, respectively, as of December 31, 2010 and 88% and 107%, respectively, as of December 31, 2009.

Table of Contents

Commencing 2010, WM Life Re applies shocks to the Japanese interest rates and foreign bond fund yields in opposite directions. In the down market scenario, Japanese interest rates are decreased 70 bps, Japanese swap spreads are tightened by 25 bps, and foreign bond fund yields are increased 70 bps. The up market scenario assumes opposite movements in the same variables. Prior to 2010, interest rates had been decreased 100 bps in the down market scenario and increased 100 bps in the up market scenario, which produced lower estimated financial impacts from the shock testing. The analysis as of December 31, 2009 has been restated to reflect the change in assumptions. For other variables, the down market scenario assumes equity indices decrease 20%, foreign currencies depreciate by 15% against the Japanese yen and implied market volatility increases as described in footnote 3 to the table above. The up market scenario assumes opposite movements in the same variables.

WM Life Re projects future surrender rates by year for policies based on a combination of actual experience and expected policyholder behavior. Actual policyholder behavior, either individually or collectively, may differ from projected behavior as a result of a number of factors such as the level of the account value versus guarantee value and applicable surrender charge, views of the primary insurance company's financial strength and ability to pay the guarantee at maturity, annuitants' need for money in a prolonged recession and time remaining to receive the guarantee at maturity. Policyholder behavior is especially difficult to predict given that WM Life Re's reinsurance contracts are relatively new and the recent financial turmoil is unprecedented for this type of product in the Japanese market. Actual policyholder behavior may differ materially from WM Life Re's projections.

During the third quarter of 2010, WM Life Re lowered the surrender assumptions that it uses to calculate its variable annuity guarantee liability. WM Life Re's previous assumptions reflected its expectation that surrenders would rise as the surrender charges in the underlying annuities decline. However, the persistent instability in financial and foreign exchange markets has kept surrenders low. The lower surrender assumptions resulted in a \$48 million increase in WM Life Re's variable annuity guarantee liability, but reduced its exposure to adverse changes in surrender rates in the future.

As of December 31, 2010, WM Life Re's surrender assumptions vary from 0.3% currently to 3% depending on the level of account value versus guarantee value; at the current levels of account value, the average surrender rate is approximately 1.1% per annum. The potential increase in the fair value of the liability due to a change in current actuarial assumptions is as follows:

Millions	Increase in fair value of liability	
	December 31, 2010	December 31, 2009
Decrease 50%	\$ 12	\$ 30
Decrease 100% (to zero surrenders)	\$ 24	\$ 61

The amounts in the table above could increase in the future if the fair value of the variable annuity guarantee liability changes due to factors other than the surrender assumptions (e.g., a decline in the ratio of the annuitants' aggregate account values to their aggregate guarantee values).

The following table summarizes the changes in White Mountains' variable annuity reinsurance liabilities and derivative contracts for the year ended December 31, 2010:

Millions	Variable Annuity (Liabilities) Level 3	Derivative Instruments			Total(4)
		Level 3 (1)	Level 2 (1)(2)	Level 1 (3)	

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

Balance at January 1, 2010	\$	(380.7)	\$	208.5	\$	23.8	\$	(38.0)	\$	194.3
Purchases				19.4						19.4
Realized and unrealized gains (losses)		(229.5)		66.4		80.0		(19.4)		127.0
Transfers in (out)										
Sales/settlements				(19.0)		(31.6)		57.4		6.8
Balance at December 31, 2010	\$	(610.2)	\$	275.3	\$	72.2	\$		\$	347.5

(1) Comprises over-the-counter instruments.

(2) Comprises interest rate swaps, total return swaps and foreign currency and bond forward contracts. Fair value measurement based upon bid/ask pricing quotes for similar instruments that are actively traded, where available. Swaps for which an active market does not exist have been priced using observable inputs including the swap curve and the underlying bond index.

(3) Comprises exchange traded equity index, foreign currency and interest rate futures. Fair value measurements based upon quoted prices for identical instruments that are actively traded.

(4) In addition to derivative instruments, WM Life Re held cash, short-term and fixed maturity investments of \$326 at December 31, 2010 posted as collateral to its reinsurance counterparties.

Table of Contents**3. White Mountains Re Reinsurance Estimates**

There is a time lag from the point when premium and related commission and expense activity is recorded by a ceding company to the point when such information is reported by the ceding company to White Mountains Re. This time lag can vary from one to several contractual reporting periods (i.e. quarterly/monthly). This lag is common in the reinsurance business, but slightly longer when a reinsurance intermediary is involved.

As a result of this time lag in reporting, White Mountains Re estimates a portion of its written premium and related commissions and expenses. Given the nature of White Mountains Re's business, estimated premium balances, net of related commissions and expenses, comprise a large portion of total premium balances receivable. The estimation process begins by identifying which major accounts have not reported activity at the most recent period end. In general, premium estimates for excess of loss business are based on expected premium income included in the contractual terms. For proportional business, White Mountains Re's estimates are derived from expected premium volume based on contractual terms or ceding company reports and other correspondence and communication with underwriters, intermediaries and ceding companies. Once premium estimates are determined, related commission and expense estimates are derived using contractual terms.

White Mountains Re closely monitors its estimation process on a quarterly basis and adjusts its estimates as more information and actual amounts become known. There is no assurance that the amounts estimated by White Mountains Re will not deviate from the amounts reported by the ceding company or reinsurance intermediary. Any such deviations are reflected in the results of operations when they become known.

The following table summarizes White Mountains Re's premium estimates and related commissions and expenses:

Millions	December 31, 2010				December 31, 2009			
	Gross Premium Estimates	Net Premium Estimates	Net Commission and Expense Estimates	Net Amount Included in Reinsurance Balances Receivable	Gross Premium Estimates	Net Premium Estimates	Net Commission and Expense Estimates	Net Amount Included in Reinsurance Balances Receivable
Property catastrophe excess	\$ 58.6	\$ 46.4	\$ (4.4)	\$ 42.0	\$ 46.9	\$ 41.7	\$ (3.7)	\$ 38.0
Other property	67.2	53.2	(18.7)	34.5	69.7	51.6	(19.1)	32.5
Accident & health	74.6	62.4	(20.9)	41.5	64.6	52.4	(19.6)	32.8
Aviation and space	57.0	42.1	(9.9)	32.2	60.3	50.0	(9.7)	40.3
Trade credit	29.1	20.9	(7.9)	13.0	14.9	4.4	(2.1)	2.3
Marine	20.4	16.7	(2.9)	13.8	18.1	13.9	(2.5)	11.4
Casualty	14.3	12.9	(7.1)	5.8	16.0	14.0	(7.3)	6.7
Agriculture	16.1	16.0	(2.0)	14.0	10.4	10.4	(0.6)	9.8
Contingency	1.7	1.7	(1.9)	(.2)	2.1	2.0	(1.8)	.2
Total	\$ 339.0	\$ 272.3	\$ (75.7)	\$ 196.6	\$ 303.0	\$ 240.4	\$ (66.4)	\$ 174.0

The net amounts recorded in reinsurance balances receivable may not yet be due from the ceding company at the time of the estimate since actual reporting from the ceding company has not yet occurred. Therefore, based on the process described above, White Mountains Re believes

all of its estimated balances are collectible, and as such no allowance has been recorded.

Table of Contents

4. Reinsurance Transactions

White Mountains insurance and reinsurance subsidiaries purchase reinsurance from time to time to protect their businesses from losses due to exposure aggregation, to manage their operating leverage ratios and to limit ultimate losses arising from catastrophic events. Amounts recoverable from reinsurers are estimated in a manner consistent with the claim liability associated with the reinsured policies. Amounts related to reinsurance contracts are recorded in accordance with ASC 944, Accounting and Reporting for Reinsurance of Short-Duration and Long-Duration Contracts (ASC 944).

In connection with White Mountains acquisition of OneBeacon in 2001, Aviva caused OneBeacon to purchase reinsurance contracts with two reinsurance companies rated AA+ (Very Strong, the second highest of twenty-one financial strength ratings) by Standard & Poor's and A++ (Superior, the highest of fifteen financial strength ratings) by A.M. Best. One is a reinsurance cover with NICO which entitles OneBeacon to recover up to \$2.5 billion in ultimate loss and LAE incurred related primarily to claims arising from business written by its predecessor prior to 1992 for asbestos claims and 1987 for environmental claims, respectively. As of December 31, 2010, OneBeacon has ceded estimated incurred losses of approximately \$2.2 billion to NICO under the NICO Cover. The other contract is a reinsurance cover with GRC for up to \$570 million of additional losses on all claims arising from accident years 2000 and prior. As of December 31, 2010, OneBeacon has ceded estimated incurred losses of \$550 million to GRC under the GRC Cover. The NICO Cover and GRC Cover, which were contingent on and occurred contemporaneously with the acquisition of OneBeacon, were put in place in lieu of a seller guarantee of loss and LAE reserves and are therefore accounted for as a seller guarantee under GAAP in accordance with Emerging Issues Task Force Topic No. D 54. NICO and GRC are wholly-owned subsidiaries of Berkshire.

The collectibility of reinsurance recoverables is subject to the solvency and willingness to pay of the reinsurer. White Mountains is selective in choosing its reinsurers, placing reinsurance principally with those reinsurers with a strong financial condition, industry ratings and underwriting ability. Management monitors the financial condition and ratings of its reinsurers on an ongoing basis. See **Note 4 Third-Party Reinsurance** in the accompanying Consolidated Financial Statements for additional information on White Mountains reinsurance programs.

Table of Contents

FORWARD-LOOKING STATEMENTS

The information contained in this report may contain forward-looking statements within the meaning of Section 27A of the Securities Act of 1933 and Section 21E of the Securities Exchange Act of 1934. All statements, other than statements of historical facts, included or referenced in this report which address activities, events or developments which White Mountains expects or anticipates will or may occur in the future are forward-looking statements. The words will, believe, intend, expect, anticipate, project, estimate, predict and similar expressions are intended to identify forward-looking statements. These forward-looking statements include, among others, statements with respect to White Mountains:

- changes in adjusted book value per share or return on equity;
- business strategy;
- financial and operating targets or plans;
- incurred losses and the adequacy of its loss and LAE reserves and related reinsurance;
- projections of revenues, income (or loss), earnings (or loss) per share, dividends, market share or other financial forecasts;
- expansion and growth of its business and operations; and
- future capital expenditures.

These statements are based on certain assumptions and analyses made by White Mountains in light of its experience and perception of historical trends, current conditions and expected future developments, as well as other factors believed to be appropriate in the circumstances. However, whether actual results and developments will conform with its expectations and predictions is subject to a number of risks and uncertainties that could cause actual results to differ materially from expectations, including:

- the risks associated with Item 1A of this Report on Form 10-K;
- claims arising from catastrophic events, such as hurricanes, earthquakes, floods or terrorist attacks;
- the continued availability of capital and financing;
- general economic, market or business conditions;
- business opportunities (or lack thereof) that may be presented to it and pursued;
- competitive forces, including the conduct of other property and casualty insurers and reinsurers;

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

- changes in domestic or foreign laws or regulations, or their interpretation, applicable to White Mountains, its competitors or its clients;
- an economic downturn or other economic conditions adversely affecting its financial position;
- recorded loss reserves subsequently proving to have been inadequate;
- actions taken by ratings agencies from time to time, such as financial strength or credit ratings downgrades or placing ratings on negative watch; and
- other factors, most of which are beyond White Mountains' control.

Consequently, all of the forward-looking statements made in this report are qualified by these cautionary statements, and there can be no assurance that the actual results or developments anticipated by White Mountains will be realized or, even if substantially realized, that they will have the expected consequences to, or effects on, White Mountains or its business or operations. White Mountains assumes no obligation to update publicly any such forward-looking statements, whether as a result of new information, future events or otherwise.

Table of Contents**Item 7A. Quantitative and Qualitative Disclosures About Market Risk**

White Mountains consolidated balance sheet includes a substantial amount of assets and liabilities whose fair values are subject to market risk. The term market risk refers to the risk of loss arising from adverse changes in interest rates, credit spreads, equity markets prices and other relevant market rates and prices. Due to White Mountains sizable investment portfolio market risk can have a significant effect on White Mountains consolidated financial position.

Interest Rate Risk

Fixed Maturity Portfolios. In connection with the Company's consolidated insurance and reinsurance subsidiaries, White Mountains invests in interest rate sensitive securities, primarily debt securities. White Mountains generally manages the interest rate risk associated with its portfolio of fixed maturity and convertible fixed maturity investments by monitoring the average duration of the portfolio. White Mountains fixed maturity and convertible fixed maturity portfolios are comprised primarily of investment grade corporate securities; U.S. government and agency securities; foreign government, agency, and provincial obligations; preferred stocks; asset-backed and mortgage-backed securities; and municipal obligations.

Increases and decreases in prevailing interest rates generally translate into decreases and increases in fair values of fixed maturity and convertible fixed maturity investments, respectively. Additionally, fair values of interest rate sensitive instruments may be affected by the creditworthiness of the issuer, prepayment options, relative values of alternative investments, the liquidity of the instrument and other market factors.

The table below summarizes the estimated effects of hypothetical increases and decreases in market interest rates on White Mountains fixed maturity and convertible fixed maturity investments.

(\$ in millions)	Fair Value at December 31, 2010	Assumed Change in Relevant Interest Rate	Estimated Fair Value After Change in Interest Rate	After-Tax Increase (Decrease) in Carrying Value
Fixed maturity and convertible fixed maturity investments	\$ 6,540.1	100 bp decrease	\$ 6,723.7	\$ 126.1
		50 bp decrease	6,632.8	63.6
		50 bp increase	6,446.7	(64.0)
		100 bp increase	6,356.4	(126.0)

Long-term obligations. As of December 31, 2010, White Mountains interest and dividend bearing long-term obligations consisted primarily of the OBH Senior Notes, WMRe Senior Notes and the WMRe Preference Shares, which have fixed interest and dividend rates.

The following table summarizes the fair value and carrying value of White Mountains financial instruments as of December 31, 2010 and 2009:

Millions	December 31, 2010		December 31, 2009	
	Fair Value	Carrying Value	Fair Value	Carrying Value
OBH Senior Notes	\$ 435.1	\$ 419.6	\$ 605.8	\$ 606.5
WMRe Senior Notes	390.9	399.2	377.7	399.1
WMRe Preference Shares(1)	212.5	250.0	212.5	250.0

(1) WMRe Preference Shares are recorded as noncontrolling interest.

The fair values of these obligations were estimated by discounting future cash flows using current market rates for similar obligations or by using quoted market prices.

Table of Contents**Credit Spread Risk**

Fixed Maturity Portfolio. White Mountains' overall fixed maturity investment strategy is to purchase securities that are attractively priced in relation to its investment risks. Widening and tightening of credit spreads generally translate into decreases and increases in fair values of fixed maturity investments, respectively. The table below summarizes the estimated effects of hypothetical widening and tightening of credit spreads on White Mountains' fixed maturity and convertible fixed maturity portfolio.

Millions	Fair Value	December 31, 2010			
		Tighten 50	Tighten 25	Widen 25	Widen 50
U.S Government and agency obligations	\$ 409.1	\$	\$	\$	\$ (.1)
Foreign government, agency and provincial obligations	1,046.5	.1			(.1)
		Tighten 100	Tighten 50	Widen 50	Widen 100
Agency mortgage-backed	1,727.0	56.3	28.3	(28.5)	(56.1)
Asset-backed	552.5	.9	.5	(2.3)	(4.5)
		Tighten 200	Tighten 100	Widen 100	Widen 200
Debt securities issued by industrial corporations	2,358.0	163.0	86.6	(86.6)	(167.9)
Municipal obligations	4.3	.2	.1	(.1)	(.2)
Convertible fixed maturities	160.2	3.5	1.8	(3.5)	(6.9)
		Tighten 400	Tighten 200	Widen 200	Widen 400
Non-agency commercial mortgage-backed	102.2	2.8	2.0	(2.2)	(4.3)
		Tighten 600	Tighten 300	Widen 300	Widen 600
Preferred stocks	89.7	6.0	5.9	(11.1)	(26.6)
Non-agency residential mortgage-backed	90.6	12.7	6.5	(5.6)	(10.2)

Equity Price Risk

The carrying values of White Mountains' common equity securities and other long-term equity investments are based on quoted market prices or management's estimates of fair value as of the balance sheet date. Market prices of common equity securities, in general, are subject to fluctuations. These fluctuations could cause the amount realized upon sale or exercise of these instruments to differ significantly from the current reported value. The fluctuations may result from perceived changes in the underlying economic characteristics of the investment, the relative price of alternative investments, supply and demand imbalances for a particular security, or other market factors. Assuming a hypothetical 10% increase or decrease in the equity market at December 31, 2010, the carrying value of White Mountains' equity securities would have increased or decreased by approximately \$125 million.

Foreign Currency Exchange Risk

White Mountains' foreign assets and liabilities are valued using period-end exchange rates and its foreign revenues and expenses are valued using average exchange rates over the period. Foreign currency exchange rate risk is the risk that White Mountains will incur losses on a U.S. dollar

basis due to adverse changes in foreign currency exchange rates.

The functional currency of WMRe Sirius is the Swedish kronor. Assuming a hypothetical 10% increase or decrease in the rate of exchange from the Swedish kronor to the U.S. dollar as of December 31, 2010, the carrying value of White Mountains' net assets denominated in Swedish kronor would have respectively decreased or increased by approximately \$30 million. WMRe Sirius also holds net assets denominated in Euros. Assuming a hypothetical 10% increase or decrease in the rate of exchange from the U.S. dollar to the Euro as of December 31, 2010, the carrying value of White Mountains' net assets denominated in Euro would have respectively decreased or increased by approximately \$25 million. WMRe Sirius and WMRe America also hold assets denominated in British pound sterling. Assuming a hypothetical 10% increase or decrease in the rate of exchange from the U.S. dollar to the British pound sterling as of December 31, 2010, the carrying value of White Mountains' net assets denominated in British pound sterling would have respectively decreased or increased by approximately \$10 million.

Table of Contents

Variable Annuity Guarantee Risk

White Mountains entered into an agreement to reinsure death and living benefit guarantees associated with certain variable annuities issued in Japan. The reinsurance agreement assumes risk related to a shortfall between the account value and the guaranteed value that must be paid by the ceding company to an annuitant or to an annuitant's beneficiary in accordance with the underlying annuity contracts. Generally, the liabilities associated with these guarantees increase with declines in the equity markets, interest rates and currencies against the Japanese yen, as well as with increases in market volatilities. The liability is also affected by annuitant-related actuarial assumptions, including surrender and mortality rates. At December 31, 2010, the total liability for the reinsured variable annuity guarantees was \$610 million.

White Mountains uses derivative instruments, including put options, interest rate swaps, total return swaps on bond indices and forward and futures contracts on currency pairs and government bonds to mitigate the risks associated with changes in the fair value of the reinsured variable annuity guarantees. At December 31, 2010, the fair value of these derivative instruments was \$348 million. In addition, WM Life Re held approximately \$326 million of cash and fixed maturity investments at December 31, 2010.

White Mountains measures its net exposure to changes in relevant interest rates, foreign exchange rates and equity markets on a daily basis and adjusts its economic hedge positions within risk guidelines established by senior management. White Mountains also monitors the effects of annuitant-related experience against actuarial assumptions (including surrender and mortality rates) on a weekly basis and adjusts relevant assumptions and economic hedge positions if required. While White Mountains actively manages its economic hedge positions, several factors, including policyholder behavior and mismatches between underlying variable annuity funds and the hedge indices, may result in the failure of economic hedges to perform as intended. See discussion of fair value measurement of reinsured variable annuity liabilities and derivative instruments and sensitivity analyses of significant inputs in Item 7 **CRITICAL ACCOUNTING ESTIMATES** .

Item 8. Financial Statements and Supplementary Data

The financial statements and supplementary data have been filed as a part of this Annual Report on Form 10-K as indicated in the Index to Consolidated Financial Statements and Financial Statement Schedules appearing on page F-1 of this report.

Item 9. Changes in and Disagreements with Accountants on Accounting and Financial Disclosure

None.

Item 9A. Controls and Procedures

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

The Principal Executive Officer (PEO) and the Principal Financial Officer (PFO) of White Mountains have evaluated the effectiveness of its disclosure controls and procedures (as defined in Rule 13a-15(e) of the Exchange Act) as of December 31, 2010. Based on that evaluation, the PEO and PFO have concluded that White Mountains' disclosure controls and procedures are adequate and effective.

The PEO and the PFO of White Mountains have evaluated the effectiveness of its internal control over financial reporting as of December 31, 2010. Based on that evaluation, the PEO and PFO have concluded that White Mountains' internal control over financial reporting is effective. Management's annual report on internal control over financial reporting is included on page F-75 of this report. The attestation report on the effectiveness of our internal control over financial reporting by PricewaterhouseCoopers LLP is included on page F-76 of this report.

There has been no change in White Mountains' internal controls over financial reporting that occurred during the fourth quarter of 2010 that has materially affected, or is reasonably likely to materially affect White Mountains' internal control over financial reporting.

Item 9B. Other Information

None.

Table of Contents

PART III

Item 10. Directors, Executive Officers and Corporate Governance

Reported under the captions "The Board of Directors", "Section 16(a) Beneficial Ownership Reporting Compliance" and "Corporate Governance Committees of the Board Audit Committee" in the Company's 2011 Proxy Statement, herein incorporated by reference, and under the caption "Executive Officers of the Registrant" in Part I of this Annual Report on Form 10-K.

The Company's Code of Business Conduct, which applies to all directors, officers and employees in carrying out their responsibilities to and on behalf of the Company, is available at www.whitemountains.com and is included as Exhibit 14 to the Company's 2004 Annual Report on Form 10-K. The Company's Code of Business Conduct is also available in print free of charge to any shareholder upon request.

There have been no material changes to the procedures by which shareholders may recommend nominees to the Company's Board of Directors. The procedures for shareholders to nominate directors are reported under the caption "Corporate Governance Committees of the Board Nominating and Governance Committee" in the Company's 2011 Proxy Statement, herein incorporated by reference.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

NOTE 1. Summary of Significant Accounting Policies

Basis of presentation

The accompanying consolidated financial statements include the accounts of White Mountains Insurance Group, Ltd. (the Company or the Registrant) and its subsidiaries (collectively with the Company, White Mountains) and have been prepared in accordance with generally accepted accounting principles in the United States (GAAP). The Company is an exempted Bermuda limited liability company whose principal businesses are conducted through its property and casualty insurance and reinsurance subsidiaries and affiliates. The Company's headquarters is located at 14 Wesley Street, Hamilton, Bermuda HM 11, its principal executive office is located at 80 South Main Street, Hanover, New Hampshire 03755-2053 and its registered office is located at Clarendon House, 2 Church Street, Hamilton, Bermuda HM 11. White Mountains reportable segments are OneBeacon, White Mountains Re, Esurance and Other Operations.

The OneBeacon segment consists of OneBeacon Insurance Group, Ltd. (OneBeacon Ltd.), an exempted Bermuda limited liability company that owns a family of U.S. based property and casualty insurance companies (collectively OneBeacon), most of which operate in a multi-company pool. OneBeacon is a specialty property and casualty insurance writer that offers a wide range of insurance products through independent agencies, regional and national brokers, wholesalers and managing general agencies. During the fourth quarter of 2006, White Mountains sold 27.6 million, or 27.6%, of OneBeacon Ltd.'s common shares in an initial public offering (the OneBeacon Offering). As of December 31, 2010 and 2009, White Mountains owned 76.0% and 75.4% of OneBeacon Ltd.'s outstanding common shares.

The White Mountains Re segment consists of White Mountains Re Ltd., an exempted Bermuda limited liability company, and its subsidiaries (collectively, White Mountains Re). White Mountains Re provides insurance and reinsurance products for property, accident & health, aviation and space, trade credit, marine, casualty, agriculture and certain other exposures on a worldwide basis through its subsidiaries, Sirius International Insurance Corporation (WMRe Sirius) and White Mountains Reinsurance Company of America (WMRe America, formerly known as Folksamerica Reinsurance Company). White Mountains Re also specializes in the acquisition and management of run-off insurance and reinsurance companies both in the United States and internationally through its White Mountains Re Solutions division. White Mountains Re also includes Scandinavian Reinsurance Company, Ltd. (Scandinavian Re), which is in run-off, Central National Insurance Company of Omaha (Central National), which was acquired during the first quarter of 2010 and is in run-off (See Note 2), and the consolidated results of the Tuckerman Capital II, LP fund (Tuckerman Fund II) prior to January 1, 2010 (see **Recently Adopted Changes in Accounting Principles**), which was transferred to White Mountains Re from Other Operations, effective June 30, 2008.

The Esurance segment consists of Esurance Holdings, Inc. and its subsidiaries and Answer Financial Inc. and its subsidiaries (AFI) (collectively, Esurance). Esurance writes personal auto insurance directly to customers in 30 states through its website and over the phone and also sells other lines of personal insurance for unaffiliated insurance companies. Esurance also writes personal auto policies through select online agents and provides other insurance products through partnerships with industry leading online providers. Esurance earns commissions and fees by referring to unaffiliated insurance companies those shoppers that it cannot underwrite because of pricing or underwriting eligibility. AFI, which White Mountains acquired during 2008 (See Note 2), is one of the largest independent personal insurance agencies in the United States. AFI sells insurance online and through call centers for both Esurance and unaffiliated companies utilizing a comparison quoting platform.

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

White Mountains Other Operations segment consists of the Company and its intermediate holding companies, its wholly-owned investment management subsidiary, White Mountains Advisors LLC (WM Advisors), White Mountains investment in common shares and warrants to purchase common shares of Symetra Financial Corporation (Symetra), the consolidated results of the Tuckerman Capital, LP fund (Tuckerman Fund I) and Tuckerman Fund II until its transfer to White Mountains Re (effective June 30, 2008, White Mountains variable annuity reinsurance business, White Mountains Life Reinsurance (Bermuda) Ltd. (WM Life Re), which is in run-off, as well as various other entities not included in other segments. The Other Operations segment also included White Mountains investment in Lightyear Delos Acquisition Corporation (Delos) prior to its disposition in December 2010, its weather risk management business prior to its disposition in August 2009 and the International American Group, Inc. (the International American Group) prior to its disposition in October 2008.

All significant intercompany transactions have been eliminated in consolidation. The preparation of financial statements in conformity with GAAP requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities as of the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. Actual results could differ from those estimates. Certain amounts in the prior period financial statements have been reclassified to conform to the current presentation.

Table of Contents

Recently Adopted Changes in Accounting Principles

Accounting Standards Codification

On June 29, 2009, the Financial Accounting Standards Board (FASB) issued Statement of Financial Accounting Standards (FAS) 168, *The FASB Accounting Standards Codification and the Hierarchy of Generally Accepted Accounting Principles* (FAS 168), which establishes the FASB Accounting Standards Codification (Codification or Accounting Standards Codification (ASC)) as the source of authoritative accounting principles to be applied in the preparation of financial statements in conformity with GAAP. FAS 168 (ASC 105-10) is effective for interim and annual periods ending after September 15, 2009. All existing non-SEC accounting and reporting standards were superseded by the Codification. White Mountains adopted the Codification for the interim period ended September 30, 2009. Adoption did not have any effect on the Company's accounting policies or financial statement presentation. However, because the Codification changes the basis for reference to authoritative GAAP guidance, the Company's footnote disclosures that reference such guidance reflect references to the codification. New accounting guidance is now issued by the FASB in the form of Accounting Standard Updates (ASUs). New guidance that became effective in 2009 prior to the adoption of Codification has been described below using the original FASB Statement reference with a parenthetical reference to the principal Codification section into which the Statement has been incorporated.

Transfers of Financial Assets and Amendments to FIN 46R

On June 12, 2009, the FASB issued ASU 2009-16, *Accounting for Transfers of Financial Assets, an amendment of FASB Statement No. 140* (included in ASC 860) and ASU 2009-17, *Amendments to FIN46(R)*(included in ASC 810). Both ASU 2009-16 and ASU 2009-17 became effective as of the beginning of the first annual reporting period that began after November 15, 2009. White Mountains adopted the new guidance on January 1, 2010.

ASU 2009-16 eliminates the concept of a qualifying special-purpose entity (QSPE). Under the new guidance, the appropriateness of de-recognition of assets held by an entity formerly considered QSPE is evaluated based on whether or not the transferor has surrendered control of the transferred assets. The evaluation must consider any continuing involvement by the transferor. White Mountains did not have any entities that were considered a QSPE under guidance prior to the amendments to ASC 860 and there was no effect resulting from adoption.

ASU 2009-17 amends ASC 810-10 to clarify the application of consolidation accounting for entities for which the controlling financial interest might not be solely indentified through voting rights. Under the new guidance a variable interest represents a controlling financial interest in a variable interest entity (VIE) when it has both of the following: (1) the power to direct the activities of a variable interest entity that most significantly impact the entity's economic performance and (2) the obligation to absorb losses of the entity that could potentially be significant to the VIE or the right to receive benefits from the entity that could potentially be significant to the VIE. A reporting entity must assess whether it has an implicit financial responsibility to ensure that a VIE operates as designed when determining if it has the power to direct the activities of the VIE that most significantly affect the entity's economic performance. ASC 810-10 as amended requires ongoing reassessments of whether a reporting entity is the primary beneficiary of a VIE. Upon adoption, White Mountains determined that its ownership interest in Tuckerman Fund II did not meet the criteria for consolidation under the revised guidance for variable interest entities and, accordingly, effective January 1, 2010, White Mountains deconsolidated its investment in Tuckerman Fund II. Upon deconsolidation, White Mountains made the fair value election for its investment in Tuckerman Fund II and recognized an adjustment to decrease opening retained earnings of \$0.4 million.

Disclosures about Fair Value Measurements

White Mountains adopted ASU 2010-06, *Improving Disclosures about Fair Value Measurements* (included in ASC 820-10), effective March 31, 2010. The ASU clarifies existing disclosure requirements for fair value measurements and requires the disclosure of (1) the amounts and nature of transfers in and out of Level 1 and Level 2 measurements; (2) purchase, sale, issuance and settlement activity for Level 3 measurements presented on a gross rather than a net basis; (3) fair value measurements by Level presented on a more disaggregated basis, by asset or liability class; and (4) more detailed disclosures about inputs and valuation techniques for Level 2 and Level 3 measurements for interim and annual reporting periods. White Mountains has expanded its fair value disclosures to meet the requirements of the ASU effective for the period ended March 31, 2010 (see **Note 5**).

Table of Contents

Alternative Investments

Effective December 31, 2009, White Mountains adopted ASU 2009-12, *Investments in Certain Entities that Calculate Net Asset Value per Share (or Its Equivalent)*. Alternative investments include ownership interests in hedge funds and private equity funds, which White Mountains includes in other long-term investments. Under the ASU, the fair value of an alternative investment may be estimated based on net asset value per share (NAV) as reported by the investee, subject to certain requirements. The investee must calculate its NAV in accordance with the measurement principles of ASC Topic 946 (*US GAAP for Investment Companies*), meaning that the investee's underlying investments have been measured at fair value. In addition, in circumstances where the investor intends to sell the investment for an amount that differs from the NAV, NAV may not be used to estimate fair value. The ASU also expands required disclosures, including the amount of unfunded commitments, a description of the terms and conditions upon which the investor may redeem investments, the circumstances in which an otherwise redeemable investment might not be redeemable (for instance, investment subject to a lockup period) as well as an estimate of when the restriction will lapse and, in circumstances where the investment cannot be redeemed but the investor receives distributions through the liquidation of the underlying assets, an estimate of the period of time over which the underlying assets are expected to be liquidated. Adoption did not have a material effect on White Mountains financial position, results of operations or cash flows.

Measuring Liabilities at Fair Value

Effective December 31, 2009, White Mountains adopted ASU 2009-05, *Measuring Liabilities at Fair Value* (included in ASC 820-10). The ASU provides additional guidance for circumstances where a quoted price in an active market for an identical liability is not available. The ASU permits use of the quoted price for an identical liability when traded as an asset or quoted prices for similar liabilities when traded as an asset. The ASU also notes that valuation techniques consistent with the fair value principles of ASC 820-10 may be used, including a present value technique or market approach based on the amount that the reporting entity would pay to transfer the identical liability or would receive to enter into an identical liability at the measurement date.

White Mountains measures its variable annuity guarantee liabilities at fair value. There is no active market for these liabilities and, accordingly, White Mountains uses a valuation technique that incorporates actuarial and capital market assumptions related to the projected cash flows over the term of the contracts. Some of the assumptions are based on observable market data, such as those related to capital markets inputs, and some are based on inputs not readily observable, such as mortality, surrender and lapse rates. Where observable inputs are available, White Mountains uses the most current inputs available.

Adoption of ASU 2009-05 did not have a material effect on White Mountains' financial position, results of operations, cash flows, or measurement of the fair value of its variable annuity guarantee liability.

Subsequent Events

On May 28, 2009, the FASB issued FAS No. 165, *Subsequent Events* (FAS 165). FAS 165 (included in ASC 855-10) defines the period after the balance sheet date during which a reporting entity should evaluate events or transactions that may occur for potential recognition or disclosure in the financial statements, the circumstances under which a reporting entity should recognize events or transaction occurring after the balance sheet date and the disclosures required for events or transactions that occurred after the balance sheet date. Subsequent events that provide

additional evidence about conditions that existed at the balance sheet date are to be recognized in the financial statements. Subsequent events that are conditions that arose after the balance sheet date but prior to the issuance of the financial statements are not recognized in the financial statements, but should be disclosed if failure to do so would render the financial statements misleading. FAS165 requires disclosure of the date through which subsequent events have been evaluated. For subsequent events not recognized, disclosures should include a description of the nature of the event and either an estimate of its financial effect or a statement that such an estimate cannot be made. White Mountains adopted FAS 165 effective June 30, 2009. Adoption did not affect the recognition or disclosure of subsequent events. White Mountains evaluates subsequent events up to the date it files its Form 10-K with the Securities and Exchange Commission for its financial statements.

Other-Than-Temporary Impairments

On June 30, 2009, White Mountains adopted FASB Staff Position (FSP) FSP FAS 115-2 and FAS 124-2, *Recognition and Presentation of Other-Than-Temporary Impairments* (included in ASC 320-10), which amends the guidance for other-than temporary impairments for debt securities classified as held-to-maturity (HTM) or available-for-sale (AFS). FSP FAS 115-2 and FAS 124-2 requires that, when evaluating whether an impairment of a debt security is other than temporary, the reporting entity is to assess whether it has the intent the sell the security or if it is more likely than not that it will be required to sell the security before the recovery of its amortized cost basis. In addition, if the present value of cash flows expected to be collected is less than the amortized cost of the security, a credit loss is deemed to exist and the security is considered to be other than temporarily impaired. The portion of the impairment loss related to a credit loss is to be recognized in earnings. The portion of the impairment loss related to factors other than credit loss is recognized as an unrealized loss.

Table of Contents

White Mountains has made the fair value election for its investments in debt securities and, accordingly, all changes in the fair value of its debt securities are recognized in earnings regardless of whether such changes in fair value represent a temporary or other than temporary decline in value. As a result, adoption of FSP FAS 115-2 and FAS 124-2 did not impact White Mountains' method of accounting for its portfolio of investment securities. However, White Mountains' investment in Symetra is accounted for under the equity method. Symetra adopted FSP FAS 115-2 and FAS 124-2 as of March 31, 2009. Upon adoption, Symetra recognized a cumulative effect adjustment to the opening balance of retained earnings with a corresponding adjustment to accumulated other comprehensive income. As a result, White Mountains recorded a \$2.9 million cumulative effect adjustment to retained earnings and other comprehensive income, which represents its portion of the cumulative effect adjustment recorded by Symetra.

Determining Fair Values in an Inactive Market and Distressed Transactions

On June 30, 2009, White Mountains adopted FSP FAS 157-4, *Determining Fair Value When the Volume and Level of Activity for the Asset or Liability Have Significantly Decreased and Identifying Transactions That Are Not Orderly* (FSP 157-4). FSP 157-4 (included in ASC 820-10-65) outlines factors to be considered by a reporting entity in determining whether a market for an asset or liability is active. In circumstances where the reporting entity concludes that there has been a significant decrease in the volume of market activity for an asset or liability as compared to normal market activity, transactions or quoted prices may not reflect fair value. In such circumstances, FSP 157-4 requires analysis of the transactions or quoted prices and, where appropriate, adjustment to market inputs to estimate fair value. In addition, FSP 157-4 requires interim disclosures to include a description of the inputs and valuation techniques used to estimate fair value and a discussion of changes during the period. Adoption of FSP 157-4 did not have a material effect on the White Mountains' financial position, results of operations, or cash flow statement.

Business Combinations and Noncontrolling Interests

On January 1, 2009, White Mountains adopted FAS No. 141 (Revised 2007), *Business Combinations - A Replacement of FASB Statement No. 141* (FAS 141R) (included in ASC 805-10) and FAS No. 160, *Noncontrolling Interests-an amendment to ARB 51* (FAS 160) (included in ASC 810-10-65).

FAS 141R requires an acquiring company to recognize the fair value of all assets acquired and liabilities assumed at their fair values at the acquisition date, with certain exceptions. This represents a basic change in approach from the cost allocation method originally described in FAS 141, *Business Combinations* (FAS 141). In addition, FAS 141R changes the accounting for step acquisitions since it requires recognition of all assets acquired and liabilities assumed, regardless of the acquirer's percentage of ownership in the acquired company. This means that the acquirer will measure and recognize all of the assets, liabilities and goodwill, not just the acquirer's share. Changes subsequent to the acquisition date in the amount of deferred tax valuation allowances and income tax uncertainties arising from a business combination are generally recognized in income. Prior to adoption such changes were recognized through goodwill. FAS 141R applies prospectively to business combinations effective January 1, 2009. There was no effect on White Mountains' financial position, results of operations or cash flows upon adoption.

FAS 160 requires all companies to account for noncontrolling interests (formerly referred to as minority interests) in subsidiaries as equity, clearly identified and presented separately from White Mountains' equity. Once a controlling interest has been acquired, any subsequent acquisitions or dispositions of noncontrolling interests that do not result in a change of control are accounted for as equity transactions. Assets and liabilities acquired are measured at fair value only once, at the original acquisition date, (i.e., the date at which the acquirer gained control). The recognition and measurement requirements of FAS 160 are applicable prospectively upon adoption; the presentation and disclosure

requirements must be retrospectively applied. Accordingly, upon adoption of FAS 160, White Mountains changed the presentation of its financial statements for prior periods to conform to the required presentation, as follows: noncontrolling interests are now presented on the balance sheets within equity, separate from White Mountains common shareholders equity; the portion of net income, extraordinary items and comprehensive income attributable to White Mountains common shareholders and the noncontrolling interests are presented separately on the consolidated statements of operations and comprehensive income; and the consolidated statements of shareholders equity includes a reconciliation of the noncontrolling interests at the beginning and end of each reporting period.

Derivatives Disclosures

On January 1, 2009, White Mountains adopted FAS No. 161, *Disclosures about Derivative Instruments and Hedging Activities - an amendment of FAS 133* (FAS 161) (included in ASC 815-10-65-1). FAS 161 requires companies that use derivatives to provide expanded qualitative and quantitative information about their use of derivative instruments, including the objectives and strategies for using derivatives, details of credit-risk related contingent features, the amounts of derivatives used, where they have been reported in the financial statements and the effect of such instruments on a company s financial position, results of operations and cash flows. The adoption of FAS 161 had no effect on the White Mountains financial position, results of operations, or cash flow statements.

Table of Contents

Participating Securities Granted in Share-Based Payment Transactions

On January 1, 2009, White Mountains adopted FSP EITF 03-6-1, *Determining Whether Instruments Granted in Share-Based Transactions are Participating Securities*. FSP EITF 03-6-1 (included in ASC 260-10-45 to 55) addresses whether instruments granted in share-based payment transactions should be considered participating securities prior to vesting. FSP EITF 03-6-1 requires that such instruments that hold unforfeitable rights to dividends or dividend equivalents, regardless of whether paid or unpaid, should be considered participating securities and accordingly should be included in the calculation of earnings per share under the two-class method instead of the treasury stock method. White Mountains issues restricted stock under employee incentive compensation plans that contain dividend participation features and that are considered participating securities. Since adoption, White Mountains has used the two-class method to calculate earnings per share. In accordance with the adoption provisions of FSP EITF 03-6-1 all prior period earnings per share data has been adjusted retroactively to conform to the provisions of FSP EITF 03-6-1.

Fair Value Measurements

On January 1, 2008, White Mountains adopted FAS No. 157, *Fair Value Measurements* (FAS 157) (included in ASC 820-10). FAS 157 provides a revised definition of fair value, establishes a framework for measuring fair value and expands financial statement disclosure requirements for fair value information. Fair value is defined as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants (an exit price) at the measurement date. The Statement establishes a fair value hierarchy that distinguishes between inputs based on market data from independent sources (observable inputs) and a reporting entity's internal assumptions based upon the best information available when external market data is limited or unavailable (unobservable inputs). The fair value hierarchy prioritizes fair value measurements into three levels based on the nature of the inputs. Quoted prices in active markets for identical assets or liabilities have the highest priority (Level 1), followed by prices determined based on observable inputs including prices for similar but not identical assets or liabilities (Level 2) and followed by prices based on assumptions that include significant unobservable inputs, having the lowest priority (Level 3).

White Mountains carries certain financial instruments at fair value with changes therein recognized in earnings. Assets and liabilities carried at fair value include substantially all of the investment portfolio; derivative instruments, both exchange traded and over the counter instruments; and reinsurance assumed liabilities associated with variable annuity benefit guarantees. Valuation of assets and liabilities measured at fair value require management to make estimates and apply judgment to matters that may carry a significant degree of uncertainty. In determining its estimates of fair value, White Mountains uses a variety of valuation approaches and inputs. Whenever possible, White Mountains estimates fair value using valuation methods that maximize the use of observable prices and other inputs. Where appropriate, assets and liabilities measured at fair value have been adjusted for the effect of counterparty credit risk.

White Mountains' invested assets measured at fair value include fixed maturity securities, convertible fixed maturity securities, common and preferred equity securities and other long-term investments, which include interests in hedge funds and private equity funds.

Where available, the estimated fair value of investments is based upon quoted prices in active markets. In circumstances where quoted prices are unavailable, White Mountains uses fair value estimates based upon other observable inputs including matrix pricing, benchmark interest rates, market comparables, and other relevant inputs. Where observable inputs are not available, the estimated fair value is based upon internal pricing models using assumptions that include inputs that may not be observable in the marketplace but which reflect management's best judgment given the circumstances and consistent with what other market participants would use when pricing such instruments.

White Mountains process to validate the market prices obtained from outside pricing sources include, but are not limited to, periodic evaluation of model pricing methodologies and monthly analytical reviews of certain prices. White Mountains also periodically performs back-testing of selected sales activity to determine whether there are any significant differences between the market price used to value the security prior to sale and the actual sale price.

Fair Value Option

On January 1, 2008, White Mountains adopted FAS 159 *The Fair Value Option for Financial Assets and Financial Liabilities* (FAS 159), (included in ASC 825-10), which allows companies to make an election on an individual instrument basis to report financial assets and liabilities at fair value. The election must be made at the inception of a transaction and may not be reversed. The election may also be made for existing financial assets and liabilities at the time of adoption. White Mountains made the fair value election for its portfolio of AFS securities which were reclassified to trading upon adoption, its investments in convertible fixed maturities, its investments in investment partnerships and for its assumed variable annuity Guaranteed Minimum Death Benefits (GMDB) liabilities. Changes in the fair value of financial assets and liabilities for which the fair value election has been made are reported pre-tax in revenues.

Table of Contents

Upon adoption, White Mountains recorded an adjustment to increase opening retained earnings and decrease accumulated other comprehensive income by \$199.6 million to reclassify net unrealized gains and net unrealized foreign currency translation gains related to AFS securities and investments in limited partnerships and limited liability corporations. In addition, White Mountains recorded an adjustment to decrease opening retained earnings and increase other liabilities by \$0.3 million for the change in the GMDB liabilities arising from measurement at fair value. White Mountains believes that making the election for its portfolio of investment securities and investments in hedge funds and private equity funds will result in reporting its investment results on a basis consistent with one of its operating principles, namely to manage investments for total return. With respect to the variable annuity GMDB guarantees, making the election will result in recognition of changes in fair value on the same basis used by White Mountains to economically hedge its variable annuity guarantee liabilities.

Significant Accounting Policies

Investment securities

At December 31, 2010, White Mountains' invested assets comprise of securities and other investments held for general investment purposes. Until May 31, 2008, White Mountains' invested assets also included securities held in a segregated trust account established in connection with the OneBeacon Offering to economically defease the \$300.0 million mandatorily redeemable preferred stock held by Berkshire (the Berkshire Preferred Stock). The Berkshire Preferred Stock was redeemed in May 2008 using the proceeds from the segregated trust account. The securities held in the segregated trust account were classified as held to maturity and were recorded at amortized cost.

White Mountains' portfolio of fixed maturity investments and common equity securities held for general investment purposes were classified as AFS for the year ended December 31, 2007. Effective January 1, 2008, upon adoption of FAS 159, the portfolio of fixed maturity investments and common equity securities held for general investment purposes were reclassified as trading. See **Recently Adopted Changes in Accounting Principles** section of **Note 1** for further discussion. AFS and trading securities are reported at fair value as of the balance sheet date. Net unrealized investment gains and losses on AFS securities were reported net, after-tax, as a separate component of shareholder's equity with changes therein, net of the effect of adjustments for noncontrolling interest and taxes, reported as a component of other comprehensive income. Changes in unrealized gains and losses on trading securities are reported, pre-tax, in revenues. Realized investment gains and losses on AFS and trading securities are accounted for using the specific identification method and are reported pre-tax in revenues. Premiums and discounts on all fixed maturity investments are accreted to income over the anticipated life of the investment.

White Mountains' invested assets measured at fair value include fixed maturity securities, common and preferred equity securities, convertible fixed maturity securities and other long-term investments, such as interests in hedge funds and private equities. In determining its estimates of fair value, White Mountains uses a variety of valuation approaches and inputs. Whenever possible, White Mountains estimates fair value using valuation methods that maximize the use of quoted prices and other observable inputs.

As of December 31, 2010 and 2009, approximately 94% of the investment portfolio recorded at fair value was priced based upon quoted market prices or other observable inputs. Investments valued using Level 1 inputs include fixed maturities, primarily investments in U.S. Treasuries, common equities and short-term investments, which include U.S. Treasury Bills. Investments valued using Level 2 inputs comprise fixed maturities including corporate debt, state and other governmental debt, convertible fixed maturity securities and mortgage and asset-backed securities. Fair value estimates for investments that trade infrequently and have few or no observable market prices are classified as Level 3 measurements. Level 3 fair value estimates based upon unobservable inputs include White Mountains' investments in hedge funds and private equity funds, as well as investments in debt securities, including certain asset-backed securities, where quoted market prices are unavailable. White Mountains uses brokers and outside pricing services to assist in determining fair values. White Mountains' process to validate the market

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

prices obtained from the outside pricing sources includes, but is not limited to, periodic evaluation of model pricing methodologies and monthly analytical reviews of certain prices. White Mountains also periodically performs back-testing of selected sales activity to determine whether there are any significant differences between the market price used to value the security prior to sale and the actual sale price.

White Mountains' investments in debt securities, including asset-backed securities, are generally valued using matrix and other pricing models. Key inputs include benchmark yields, benchmark securities, reported trades, issuer spreads, bids, offers, credit ratings and prepayment speeds. Income on mortgage-backed and asset-backed securities is recognized using an effective yield based on anticipated prepayments and the estimated economic life of the securities. When actual prepayments differ significantly from anticipated prepayments, the estimated economic life is recalculated and the remaining unamortized premium or discount is amortized prospectively over the remaining economic life.

Investment securities are regularly reviewed for impairment based on criteria that include the extent to which cost exceeds market value, the duration of the market decline, the financial health of and specific prospects for the issuer and the ability and intent to hold the investment to recovery. Investment losses that are other than temporary are recognized in earnings.

Table of Contents

Short-term investments consist of money market funds, certificates of deposit and other securities which, at the time of purchase, mature or become available for use within one year. Short-term investments are carried at amortized cost, which approximated fair value as of December 31, 2010 and December 31, 2009.

Other long-term investments

White Mountains' other long-term investments comprise primarily of hedge funds and private equity funds. Prior to January 1, 2008, changes in White Mountains' interest in hedge funds and private equities accounted for using the equity method were included in net realized investment gains and losses and changes in White Mountains' interest in hedge funds and private equities not accounted for under the equity method were reported, after-tax, as a component of shareholders' equity, with changes therein reported as a component of other comprehensive income. Effective January 1, 2008, in connection with its adoption of FAS 159 (See **Recently Adopted Changes in Accounting Principles** section of **Note 1** for further discussion) White Mountains made the fair value election for most of its investments in hedge funds and private equity interests. For the hedge fund and private equity investments for which White Mountains has made the fair value election, changes in fair value are reported in revenues on a pre-tax basis. For those hedge fund and private equity investments for which White Mountains has not made the fair value election, White Mountains continues to account for its interests under the equity method.

Securities lending

During 2009, White Mountains exited its securities lending programs. White Mountains had participated in securities lending programs through both OneBeacon and White Mountains Re as a mechanism for generating additional investment income. Under the security lending arrangements, certain securities that White Mountains owned were loaned to other institutions for short periods of time through a lending agent. White Mountains retained the earnings and cash flows associated with the loaned securities and received a fee from the borrower for the temporary use of the asset. The security lending counterparty was required to provide collateral for the loaned securities, which was then invested by the lending agent. The collateral was required at a rate of 102% of the fair value of the loaned securities.

In February 2009, OneBeacon amended the terms of its securities lending program to segregate the assets supporting the collateral from a collective investment vehicle managed by the lending agent into separate accounts. Accordingly, purchases and sales of invested assets held in the separate accounts as well as changes in the payable to the borrower for the return of collateral are reflected in the investing and financing sections of the cash flow statement commencing with the quarter ended March 31, 2009.

For OneBeacon's program prior to February 2009 and for the White Mountains Re's program, the collateral was fully controlled by the lending agent and could not be sold or re-pledged. The fair value of the securities lending collateral was recorded as both an asset and as a liability; however, other than in the event of a default by the borrower, the collateral was not available to White Mountains and would have been remitted to the borrower by the lending agent upon return of the loaned securities. Because of these restrictions, White Mountains considered White Mountains Re's securities lending activities and OneBeacon's securities lending activities prior to February 2009 to be non-cash transactions.

During 2009, OneBeacon and White Mountains Re exited their securities lending programs. As of December 31, 2010, all loaned securities under the OneBeacon program had been returned except for two illiquid instruments for which OneBeacon holds \$1.7 million in collateral. As of December 31, 2009, all loaned securities under the White Mountains Re program had been returned to White Mountains Re and all collateral

held by White Mountains Re had been returned to borrowers.

Derivative financial instruments

White Mountains holds a variety of derivative financial instruments for both risk management and investment purposes. White Mountains recognizes all derivatives as either assets or liabilities, measured at fair value, in the consolidated balance sheets.

Warrants

White Mountains holds warrants to acquire common shares of Symetra. White Mountains also holds warrants that it has received in the restructuring (e.g., securities received from bankruptcy proceedings) of certain of its common equity and/or fixed maturity investments. The Symetra warrants held by White Mountains are entitled to dividends declared to common shareholders. White Mountains accounts for its investments in warrants as derivatives.

White Mountains uses a Black Scholes valuation model to determine the fair value of the Symetra warrants. The major assumptions used in valuing the Symetra warrants at December 31, 2010 were a risk-free rate of 1.29%, volatility of 25%, an expected life of 3.58 years, a strike price of \$11.49 per share and a share price of \$13.70 per share.

Symetra's warrants are not publicly traded. Accordingly, the fair value measurement of the warrants is based on observable and unobservable inputs. Due to an insufficient history of Symetra's volatility, it is classified as a Level 3 measurement.

Table of Contents

Cash flow hedge

Concurrent with entering into a variable rate mortgage note, OneBeacon entered into an interest rate swap agreement under which it paid a fixed rate and received a variable rate to hedge its exposure to interest rate fluctuations. The notional amount of the swap was equal to the outstanding principal of the mortgage note it hedges and was adjusted to match the drawdowns and repayments on the mortgage note so that the principal amount of the mortgage note and the notional amount of the swap were equal at all times. The underlying index used to determine the variable interest paid under the swap was the same as that used for OneBeacon's variable rate mortgage note. White Mountains accounted for the swap as a cash flow hedge and recorded the interest rate swap at fair value on the balance sheet in other assets. Changes in the fair value of the interest rate swap, after tax, were reported as a component of other comprehensive income. Any gains and losses on the derivatives representing either hedge ineffectiveness or hedge components excluded from the assessment of effectiveness were recorded in revenues. On May 7, 2009, OneBeacon repaid the outstanding principal on the mortgage note and at the same time paid \$7.4 million to settle the interest rate swap. The interest rate swap settlement was recorded as a reduction of other revenues on a pre-tax basis with a corresponding \$4.8 million increase in other comprehensive income on an after tax basis (\$7.4 million pre-tax).

Interest rate lock

In anticipation of the issuance of the WMRe Senior Notes (see **Note 6**), White Mountains Re entered into an interest rate lock agreement to hedge its interest rate exposure from the date of the agreement until the pricing of the WMRe Senior Notes. The agreement was terminated on March 15, 2007 and the resulting loss of \$2.4 million was recorded in accumulated other comprehensive income. The loss is being reclassified from accumulated other comprehensive income to interest expense over the life of the WMRe Senior notes using the interest method.

Derivatives Variable annuity reinsurance

White Mountains has entered into agreements to reinsure death and living benefit guarantees associated with certain variable annuities in Japan through its wholly owned subsidiary, WM Life Re. The accounting for benefit guarantees differs depending on whether or not the guarantee is classified as a derivative or an insurance liability.

Guaranteed minimum accumulation benefits (GMABs) are paid to an annuitant for any shortfall between accumulated account value at the end of the accumulation period and the annuitant's total deposit, less any withdrawal payments made to the annuitant during the accumulation period. GMABs meet the definition of a derivative for accounting purposes. Therefore, GMABs are carried at fair value, with changes thereon recognized in income in the period of the change. The liability for the reinsured GMAB contracts has been determined using internal valuation models that use assumptions for interest rates, equity markets, foreign exchange rates and market volatilities at the valuation date, as well as annuitant-related actuarial assumptions, including surrender and mortality rates.

If an annuitant dies during the accumulation period of an annuity contract, guaranteed minimum death benefits (GMDBs) are paid to the annuitant's beneficiary for shortfalls between accumulated account value at the time of an annuitant's death and the annuitant's total deposit, less any living benefit payments or withdrawal payments previously made to the annuitant. For the year ended December 31, 2007, GMDBs were accounted for as life insurance liabilities. The life insurance liability for the reinsured GMDB contracts is calculated based on investment returns, mortality, surrender rates and other assumptions and is recognized over the contract period. Effective January 1, 2008, upon adoption of

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

FAS 159, White Mountains elected to measure its GMDB liabilities at fair value.

The valuation of these liabilities involves significant judgment and is subject to change based upon changes in capital market assumptions and emerging surrender and mortality experience of the underlying contracts in force.

WM Life Re has entered into derivative contracts that are designed to economically hedge against changes in the fair value of living and death benefit liabilities associated with its variable annuity reinsurance arrangements. The derivatives include futures and over-the-counter option contracts on interest rates, major bond and equity indices, and foreign currencies. All WM Life Re's derivative instruments are recorded as assets or liabilities at fair value on the balance sheet within other assets. These derivative financial instruments do not meet the criteria for hedge accounting treatment, and accordingly, changes in fair value are recognized in the current period as gains or losses in the income statement within other revenues.

In accordance with FAS 157, WM Life Re has considered the effect of counterparty credit risk in determining the fair value of its derivative contracts and its GMAB and GMDB liabilities for the years ended December 31, 2010 and 2009.

Cash

Cash includes amounts on hand and demand deposits with banks and other financial institutions. Amounts presented in the statement of cash flows are shown net of balances acquired and sold in the purchase or sale of the Company's consolidated subsidiaries and exclude changes in amounts of restricted cash (See **Note 8**).

Table of Contents

Insurance and reinsurance operations

White Mountains accounts for insurance and reinsurance policies that it writes in accordance with ASC 944. Premiums written are recognized as revenues and are earned ratably over the term of the related policy or reinsurance treaty. Unearned premiums represent the portion of premiums written that are applicable to future insurance or reinsurance coverage provided by policies or treaties in force. AutoOne Insurance, which acts as a limited assigned distribution (LAD) servicing carrier, enters into contractual arrangements with insurance companies to assume private passenger automobile assigned risk exposures in the state of New York. AutoOne Insurance receives LAD servicing fees for assuming these risks. LAD servicing fees are typically a percentage of the total premiums that AutoOne Insurance must write to fulfill the obligation of the transferor company. LAD servicing carriers may choose to write certain policies voluntarily by taking risks out of the New York Automobile Insurance Plan (NYAIP). These policies generate takeout credits which can be sold for fees to the transferor company (takeout fees). These fees are also typically a percentage of the transferor company s NYAIP premium assignments. AutoOne Insurance s LAD servicing and takeout fees are recorded as written premium when billed and are earned ratably over the term of the related policy to which the fee relates.

White Mountains charges fees on certain of its insurance policies. Refundable fees are classified with premiums and recognized in earnings over the policy term. Fees that represent a reimbursement of expenses, such as installment fees, are recorded as a reduction of underwriting expenses.

Deferred acquisition costs represent commissions, premium taxes, brokerage expenses and other costs which are directly attributable to and vary with the production of business. These costs are deferred and amortized over the applicable premium recognition period as insurance and reinsurance acquisition expenses. Deferred acquisition costs are limited to the amount expected to be recovered from future earned premiums and anticipated investment income. This limitation is referred to as a premium deficiency. A premium deficiency is recognized if the sum of expected loss and loss adjustment expenses (LAE), expected dividends to policyholders, unamortized acquisition costs, and maintenance costs exceeds related unearned premiums and anticipated investment income. A premium deficiency is recognized by charging any unamortized acquisition costs to expense to the extent required in order to eliminate the deficiency. If the premium deficiency exceeds unamortized acquisition costs then a liability is accrued for the excess deficiency.

Losses and LAE are charged against income as incurred. Unpaid insurance losses and LAE are based on estimates (generally determined by claims adjusters, legal counsel and actuarial staff) of the ultimate costs of settling claims, including the effects of inflation and other societal and economic factors. Unpaid reinsurance losses and LAE are based primarily on reports received from ceding companies and actuarial projections. Unpaid loss and LAE reserves represent management s best estimate of ultimate losses and LAE, net of estimated salvage and subrogation recoveries, if applicable. Such estimates are regularly reviewed and updated and any adjustments resulting there from are reflected in current operations. The process of estimating loss and LAE involves a considerable degree of judgment by management and the ultimate amount of expense to be incurred could be considerably greater than or less than the amounts currently reflected in the financial statements.

OneBeacon discounts certain of its long-term workers compensation loss and LAE reserves when such liabilities constitute unpaid but settled claims under which the payment pattern and ultimate costs are fixed and determinable on an individual claim basis. OneBeacon discounts these reserves using an average discount rate which is determined based on the various assumptions including consideration of when the claims will be settled (5.0% and 5.3% at December 31, 2010 and 2009). As of December 31, 2010 and 2009, the discount on OneBeacon s workers compensation loss and LAE reserves amounted to \$119.4 million and \$127.0 million.

In connection with purchase accounting for the OneBeacon Acquisition, White Mountains was required to adjust to fair value OneBeacon s loss and LAE reserves and the related reinsurance recoverables by \$646.9 million and \$346.9 million, respectively, on OneBeacon s acquired balance sheet as of June 1, 2001. This net reduction to loss and LAE reserves of \$300.0 million is being accreted through an income statement charge

ratably with and over the period the claims are settled (See **Note 3**).

In connection with purchase accounting for WMRe Sirius, White Mountains was required to adjust to fair value the loss and LAE reserves on WMRe Sirius acquired balance sheet by \$58.1 million. This fair value adjustment is being accreted through an income statement charge ratably with and over the period the claims are settled (See **Note 3**).

White Mountains insurance and reinsurance subsidiaries enter into ceded reinsurance contracts from time to time to protect their businesses from losses due to concentration of risk, to manage their operating leverage ratios and to limit losses arising from catastrophic events. Such reinsurance contracts are executed through excess of loss treaties and catastrophe contracts under which the reinsurer indemnifies for a specified part or all of certain types of losses over stipulated amounts arising from any one occurrence or event. White Mountains has also entered into quota share treaties with reinsurers under which all risks meeting prescribed criteria are covered on a pro-rata basis. The amount of each risk ceded by White Mountains is subject to maximum limits which vary by line of business and type of coverage.

Table of Contents

Amounts recoverable from reinsurers are estimated in a manner consistent with the claim liability associated with the reinsured policies. The collectability of reinsurance recoverables is subject to the solvency of the reinsurers. White Mountains is selective in regard to its reinsurers, principally placing reinsurance with those reinsurers with a strong financial condition, industry ratings and underwriting ability. Management monitors the financial condition and ratings of its reinsurers on an ongoing basis.

Reinsurance premiums, commissions, expense reimbursements and reserves related to reinsured business are accounted for on a basis consistent with those used in accounting for the original policies issued and the terms of the reinsurance contracts. Premiums ceded to other companies are reported as a reduction of premiums written. Expense allowances received in connection with reinsurance ceded have been accounted for as a reduction of the related policy acquisition costs and are deferred and amortized accordingly. Funds held by ceding companies represent amounts due to White Mountains in connection with certain assumed reinsurance agreements in which the ceding company retains a portion of the premium to provide security against future loss payments. The funds held by ceding companies are generally invested by the ceding company and a contractually agreed interest amount is credited to the Company and recognized as investment income. Funds held under reinsurance treaties represent contractual payments due to the reinsurer that White Mountains has retained to secure obligations of the reinsurer. Such amounts are recorded as liabilities in the consolidated financial statements.

Accruals for contingent commission liabilities are established for reinsurance contracts that provide for the stated commission percentage to increase or decrease based on the loss experience of the contract. Changes in the estimated liability for such arrangements are recorded as contingent commissions. Accruals for contingent commission liabilities are determined through the review of the contracts that have these adjustable features and are estimated based on expected loss and LAE.

Mandatory Shared Market Mechanisms

As a condition to its licenses to do business in certain states, White Mountains' insurance operations must participate in various mandatory shared market mechanisms commonly referred to as residual or involuntary markets. These markets generally consist of risks considered to be undesirable from a standard or routine underwriting perspective. Each state dictates the levels of insurance coverage that are mandatorily assigned to participating insurers within these markets. The total amount of such business an insurer must accept in a particular state is generally based on that insurer's market share of voluntary business written within that state. In certain cases, White Mountains is obligated to write business from shared market mechanisms at a future date based on its historical market share of all voluntary policies written within that state. Involuntary business generated from mandatory shared market mechanisms is accounted for as direct insurance business or as assumed reinsurance depending upon the structure of the mechanism.

OneBeacon's market assignments are typically required to be written in the current period, however, in certain cases OneBeacon is required to accept policy assignments at a future date. OneBeacon's residual market assignments to be written in the future primarily relate to private passenger automobile assigned risk exposures within the State of New York where several of OneBeacon's insurance subsidiaries write voluntary automobile insurance. The share of involuntary written premium for policies assigned by the NYAIP to a particular insurer in a given year is based on the proportion of the total voluntary writings in New York two years prior. Anticipated losses associated with future market assignments are recognized when the amount of such anticipated losses is determined to be probable and can be reasonably estimated.

Insurance-Related Assessments

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

Under existing guaranty fund laws in all states, insurers licensed to do business in those states can be assessed for certain obligations of insolvent insurance companies to policyholders and claimants. White Mountains insurance subsidiaries record guaranty fund assessments when it is probable that an assessment will be made and the amount can be reasonably estimated.

Deferred Software Costs

White Mountains capitalizes costs related to computer software developed for internal use during the application development stage of software development projects. These costs generally consist of certain external, payroll and payroll-related costs. White Mountains begins amortization of these costs once the project is completed and ready for its intended use. Amortization is on a straight-line basis and over a useful life of three to five years. At December 31, 2010 and 2009, White Mountains had unamortized deferred software costs of \$30.6 million and \$30.2 million.

Federal and foreign income taxes

The majority of White Mountains subsidiaries file consolidated tax returns in the United States. Income earned or losses generated by companies outside the United States are generally subject to an overall effective tax rate lower than that imposed by the United States.

Deferred tax assets and liabilities are recorded when a difference between the carrying amounts of assets and liabilities for financial reporting purposes and the amounts for tax purposes exists, and for other temporary differences. The deferred tax asset or liability is recorded based on tax rates expected to be in effect when the difference reverses. The deferred tax asset is recognized when it is more likely than not that it will be realized.

Table of Contents*Foreign currency exchange*

The U.S. dollar is the functional currency for all of the Company's businesses except for WMRe Sirius, the Canadian reinsurance operations of WMRe America and certain other smaller international activities. White Mountains also invests in securities denominated in foreign currencies. Assets and liabilities recorded in these foreign currencies are translated into U.S. dollars at exchange rates in effect at the balance sheet date, and revenues and expenses are converted using the average exchange rates for the period. Net foreign exchange gains and losses arising from the translation are generally reported in shareholders' equity, in accumulated other comprehensive income or loss.

Assets and liabilities relating to foreign operations are translated into the functional currency using current exchange rates; revenues and expenses are translated into the functional currency using the weighted average exchange rate for the period. The resulting exchange gains and losses are reported as a component of net income in the period in which they arise. As of December 31, 2010 and 2009, White Mountains had an unrealized foreign currency translation gains of \$61.4 million and \$11.5 million recorded on its consolidated balance sheet.

The following rates of exchange for the U.S. dollar have been used for the most significant operations:

Currency	Opening Rate 2010	Closing Rate 2010	Opening Rate 2009	Closing Rate 2009
Swedish kronor	7.1280	6.7030	7.7831	7.1280
British pound	.6191	.6420	.6829	.6191
Canadian dollar	1.0485	.9981	1.2202	1.0485

Noncontrolling Interest

Noncontrolling interests consist of the ownership interests of noncontrolling shareholders in consolidated subsidiaries, and are presented separately on the balance sheet. The portion of comprehensive income attributable to noncontrolling interests is presented net of related income taxes in the statement of operations and comprehensive income. The change in unrealized investment gains (losses) prior to the January 1, 2008 adoption of FAS 159, foreign currency translation and the change in the fair value of the interest rate swap to hedge OneBeacon's exposure to variability in the interest rate on its mortgage note are presented in accumulated other comprehensive income net of noncontrolling interest. The percentage of the noncontrolling shareholders' ownership interest in OneBeacon Ltd. at December 31, 2010 and December 31, 2009 was 24.0% and 24.6%.

On May 24, 2007, White Mountains Re Group, Ltd. (WMRe Group), an intermediate holding company of White Mountains Re, issued 250,000 non-cumulative perpetual preference shares with a \$1,000 per share liquidation preference (the WMRe Preference Shares). Proceeds of \$245.7 million, net of \$4.3 million of issuance costs and commissions, were received from the issuance. These shares were issued in an offering that was exempt from the registration requirements of the Securities Act of 1933. Holders of the WMRe Preference Shares receive dividends on a non-cumulative basis when and if declared by WMRe Group. The holders of the WMRe Preference Shares have the right to elect two directors to WMRe Group's board in the event of non-payment of dividends for six quarterly dividend periods. The right ceases upon the payment of dividends for four quarterly periods or the redemption of the WMRe Preference Shares. In addition, WMRe Group may not declare or pay dividends on its common shares (other than stock dividends and dividends paid for purposes of any employee benefit plans of WMRe Group and its subsidiaries) unless it is current on its most recent dividend period. The dividend rate is fixed at an annual rate of 7.506% until June 30, 2017. After June 30, 2017, the dividend rate will be paid at a floating annual rate, equal to the greater of 3 month LIBOR plus 3.20% or 7.506%. The

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

WMRe Preference Shares are redeemable solely at the discretion of WMRe Group on or after June 30, 2017 at their liquidation preference of \$1,000 per share, plus any declared but unpaid dividends. Prior to June 30, 2017, WMRe Group may elect to redeem the WMRe Preference Shares at an amount equal to the greater of 1) the aggregate liquidation preference of the shares to be redeemed and 2) the sum of the present values of the aggregate liquidation preference of the shares to be redeemed and the remaining scheduled dividend payments on the shares to be redeemed (excluding June 30, 2017), discounted to the redemption date on a semi-annual basis at a rate equal to the rate on a comparable treasury issue, plus 45 basis points. In the event of a liquidation of WMRe Group, the holders of the WMRe Preference Shares would have preference over the common shareholders and would receive a distribution equal to the liquidation preference per share, subject to availability of funds. The WMRe Preference Shares and dividends thereon are included in noncontrolling interest on the balance sheet and as noncontrolling interest expense on the statement of income and comprehensive income.

At December 31, 2010 and 2009, the noncontrolling equity interest in White Mountains consolidated limited partnerships was \$59.7 million and \$80.5 million. At December 31, 2010 and 2009, the noncontrolling equity interest in A.W.G. Dewar Inc, a subsidiary of OneBeacon, was \$3.1 million and \$2.6 million.

At June 30, 2008, White Mountains owned 68.9% of AFI, while the noncontrolling shareholders of AFI held 31.1% of its common equity shares and a \$29.6 million Secured Senior Note from AFI (See **Note 2**). On July 30, 2008, White Mountains acquired the remaining equity and debt interests in AFI from the noncontrolling owner (See **Note 2**).

Table of Contents

Recent Accounting Pronouncements

Policy Acquisition Costs

On October 13, 2010, the FASB issued ASU 2010-26, *Accounting for Costs Associated with Acquiring or Renewing Insurance Contracts* (ASC 944). The new standard changes the types of policy acquisition costs that are eligible for deferral. Specifically, the new guidance limits deferrable costs to those that are incremental direct costs of contract acquisition and certain costs related to acquisition activities performed by the insurer, such as underwriting, policy issuance and processing, medical and inspection costs and sales force contract selling. The ASU defines incremental direct costs as those costs that result directly from and were essential to the contract acquisition and would not have been incurred absent the acquisition. Accordingly, under the new guidance, deferrable acquisition costs are limited to costs related to successful contract acquisitions. Acquisition costs that are not eligible for deferral are to be charged to expense in the period incurred.

ASU 2010-26 is effective for interim periods and annual fiscal years beginning after December 15, 2011 and may be applied prospectively or retrospectively. White Mountains currently defers certain advertising costs associated with contract acquisition that will likely not meet the criteria for deferral under ASU 2010-26 when it is adopted. White Mountains is currently evaluating the effect the adoption of ASU 2010-26 will have on its financial position and results of operations.

NOTE 2. Significant Transactions

OneBeacon Personal Lines and Commercial Lines Sales

In July 2010, OneBeacon completed the sale of its traditional personal lines business (the *Personal Lines Transaction*) to Tower Group, Inc. (*Tower*). The *Personal Lines Transaction* included two insurance companies, York Insurance Company of Maine (*York*) and Massachusetts Homeland Insurance Company (*MHIC*), through which the majority of the traditional personal lines business was written on a direct basis. Subsequent to the transaction, OneBeacon cedes to Tower, on a 100% quota share basis, traditional personal lines business not directly written by York and MHIC; and OneBeacon assumes, on a 100% quota share basis, non-traditional personal lines business written directly by York. The *Personal Lines Transaction* also included two attorneys-in-fact managing the reciprocal insurance exchanges (*reciprocals*) that wrote the traditional personal lines business in New York and New Jersey, the surplus notes issued by the New York and New Jersey reciprocals, and the remaining renewal rights to certain other traditional personal lines insurance policies. The sale of the two attorneys-in-fact and the transfer of the surplus notes triggered deconsolidation of the reciprocals by White Mountains. OneBeacon and Tower also entered into a *Transition Services Agreement* (*TSA*), pursuant to which OneBeacon provides certain services to Tower during a three-year term.

OneBeacon received \$166.6 million as consideration, which was based upon the carrying value of the traditional personal lines business as of July 1, 2010. For the year ended December 31, 2010, OneBeacon recorded an after-tax net gain of \$24.6 million on the sale that is comprised of \$8.5 million included in other revenues and a \$16.1 million tax benefit. OneBeacon's second quarter financial statements included \$5.6 million of the tax benefit, which related to the difference between the tax basis of the companies sold as part of the *Personal Lines Transaction* and the net asset value of those entities under GAAP. The purchase price is subject to post-closing adjustments. Net written premiums for the business sold were approximately \$420 million for the year ended December 31, 2009.

On December 3, 2009, OneBeacon sold the renewal rights to approximately \$490 million in premiums from its non-specialty commercial lines business to The Hanover Insurance Group (The Hanover). The transaction includes small commercial accounts and the non-specialty portion of the middle-market business, beginning with January 1, 2010 effective dates (the Commercial Lines Transaction). As consideration for the Commercial Lines Transaction, OneBeacon received \$23.2 million, reflected in net other revenues. In accordance with the terms of the Commercial Lines Transaction, during the year ended December 31, 2010, OneBeacon recognized additional consideration of \$10.2 million, reflected in net other revenues, for aggregate premium renewals exceeding \$200 million.

Table of Contents

As a result of both the Commercial and Personal Lines Transactions, the OneBeacon qualified pension plan (the Qualified Plan) experienced a partial plan settlement which required re-measurement of the remaining accumulated plan benefits in accordance with ASC 715. OneBeacon's discount rate assumption used to account for the Qualified Plan reflects the rate at which the benefit obligation could effectively be settled. Based on consideration of published yields for high quality long-term corporate bonds, U.S. Treasuries, insurance company annuity contract pricings, and cash flow matching analysis utilizing the Citigroup Pension Discount Curve and Liability Index, the discount rate utilized for the revaluation of the Qualified Plan obligations was 4.75% as compared to 5.50% at December 31, 2009. As a result of the partial settlement and re-measurement, the Company recognized a loss of \$0.2 million through pre-tax income and a pre-tax loss of \$0.5 million through other comprehensive income. The remaining Qualified Plan liabilities, which are primarily attributable to Qualified Plan participants who remain actively employed by OneBeacon, are approximately \$88.4 million.

Acquisition of Central National

On February 26, 2010, White Mountains Re acquired Central National for \$5 million in cash. Central National ceased writing business in 1989 and has operated under the control of the Nebraska Department of Insurance since 1990. The transaction resulted in a gain of \$12.8 million recorded in other revenues.

Berkshire Exchange

During the first quarter of 2008, White Mountains entered into an exchange agreement with Berkshire to transfer certain run-off businesses and a substantial amount of cash to Berkshire in exchange for substantially all of the common shares of White Mountains owned by Berkshire (the Berkshire Exchange).

On October 31, 2008 under the terms of the agreement, Berkshire exchanged substantially all of its 16.3% stake in White Mountains (1,634,921 of its 1,724,200 common shares) for 100% of a White Mountains subsidiary, which held Commercial Casualty Insurance Company (CCIC), International American Group, and \$707.9 million in cash. White Mountains recognized a pre-tax gain of \$25.8 million related to the disposition of CICC and International American Group in the exchange.

Answer Financial

During the first quarter of 2008, White Mountains acquired 42% of the outstanding debt and equity of AFI, a personal insurance agency, for \$30.2 million. White Mountains also contributed an additional \$2.6 million to AFI during the first quarter of 2008 and accounted for its investment in AFI under the equity method.

On April 1, 2008, AFI emerged from a pre-packaged bankruptcy reorganization. In the reorganization, the debt held by White Mountains was exchanged for additional shares of common equity, thus increasing White Mountains' ownership share to 68.9%. Effective April 1, 2008, White Mountains accounts for its investment in AFI as a consolidated subsidiary. In connection with the reorganization, which was accounted for as an acquisition under the purchase method of accounting, White Mountains recorded the identifiable assets and liabilities of AFI at their fair values

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

as of April 1, 2008. Significant assets and liabilities acquired included cash of \$9.4 million, a promissory note in the principal amount of \$29.6 million (the AFI note), accrued liabilities of \$7.5 million and a deferred tax asset of \$64.2 million, which was offset by a full valuation allowance prior to purchase accounting adjustments. After allocating the purchase price to identifiable tangible assets and liabilities, White Mountains also recorded adjustments to allocate the remaining acquisition cost, consisting of a \$53.2 million intangible asset related to the value of business in force at the acquisition date, an adjustment to property and equipment of \$4.0 million to reflect the fair value of AFI's information technology infrastructure, and a related deferred tax liability of \$20.0 million. Upon recording the deferred tax liability, the valuation allowance was reduced by \$20.0 million resulting in a valuation allowance of \$44.2 million and a deferred tax asset of \$20.0 million.

On July 30, 2008, White Mountains acquired the remaining equity and the AFI Note from the noncontrolling owner of AFI for \$44.4 million. White Mountains has subsequently contributed the \$29.6 million AFI Note to AFI, extinguishing the obligation. White Mountains recorded the identifiable assets and liabilities of AFI at their fair values as of July 30, 2008. Significant assets and liabilities acquired included cash of \$1.3 million, accrued liabilities of \$1.9 million and a deferred tax asset of \$5.1 million, which was offset by a full valuation allowance prior to purchase accounting adjustments. After allocating the purchase price to identifiable tangible assets and liabilities, White Mountains also recorded adjustments to allocate the remaining acquisition cost consisting of a \$12.9 million intangible asset related to the value of business in force at acquisition date, an adjustment to property and equipment of \$1.8 million to reflect the fair value of AFI's information technology infrastructure and a related deferred tax liability of \$5.1 million.

The intangible asset associated with the acquired business in force is being amortized over an 8-year period, consistent with the expected term of the related business in force. For the years ended December 31, 2010, 2009, and 2008 White Mountains recognized \$10.4 million, \$15.6 million, and \$14.7 million of amortization expense related to the intangible asset associated with the acquired business in force. The purchase adjustment related to the information technology infrastructure is being amortized over a 3-year period, consistent with White Mountains amortization period for similar assets. For the years ended December 31, 2010, 2009, and 2008 White Mountains recognized \$1.9 million, \$1.9 million and \$1.3 million of amortization expense related to AFI's information technology infrastructure.

Table of Contents

Helicon

On January 7, 2008, White Mountains Re acquired Helicon Re Holdings, Ltd. for approximately \$150.2 million, which resulted in the recognition of an extraordinary gain of \$4.2 million. Helicon Re Holdings, Ltd. is the parent of Helicon Reinsurance Company, Ltd. (Helicon), which in 2006 and 2007 provided quota share retrocessional coverage to White Mountains Re. In the fourth quarter of 2008, Helicon Re Holdings, Ltd. and Helicon were both dissolved.

Share Repurchase

In 2006, White Mountains board of directors authorized the Company to repurchase up to 1 million of its common shares, from time to time, subject to market conditions. On August 26, 2010, White Mountains board of directors authorized the Company to repurchase an additional 600,000 common shares. Shares may be repurchased on the open market or through privately negotiated transactions. The repurchase authorization does not obligate the Company to acquire any specific number of shares. This program does not have a stated expiration date. During 2010 the Company repurchased 677,125 common shares for \$222.0 million. During 2009, the Company did not repurchase any common shares under the Share Repurchase Plan. During 2008, excluding the share exchange agreement with Berkshire, the Company repurchased 129,770 shares under the plan for \$55.9 million.

NOTE 3. Reserves for Unpaid Losses and Loss Adjustment Expenses

Insurance

White Mountains insurance subsidiaries establish loss and LAE reserves that are estimates of amounts needed to pay claims and related expenses in the future for insured events that have already occurred. The process of estimating reserves involves a considerable degree of judgment by management and, as of any given date, is inherently uncertain.

Loss and LAE reserves are typically comprised of (1) case reserves for claims reported and (2) reserves for losses that have occurred but for which claims have not yet been reported, referred to as incurred but not reported (IBNR) reserves, which include a provision for expected future development on case reserves. Case reserves are estimated based on the experience and knowledge of claims staff regarding the nature and potential cost of each claim and are adjusted as additional information becomes known or payments are made. IBNR reserves are derived by subtracting paid loss and LAE and case reserves from estimates of ultimate loss and LAE. Actuaries estimate ultimate loss and LAE using various generally accepted actuarial methods applied to known losses and other relevant information. Like case reserves, IBNR reserves are adjusted as additional information becomes known or payments are made.

Ultimate loss and LAE are generally determined by extrapolation of claim emergence and settlement patterns observed in the past that can reasonably be expected to persist into the future. In forecasting ultimate loss and LAE with respect to any line of business, past experience with respect to that line of business is the primary resource, but cannot be relied upon in isolation. White Mountains own experience, particularly claims development experience, such as trends in case reserves, payments on and closings of claims, as well as changes in business mix and

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

coverage limits, is the most important information for estimating its reserves. External data, available from organizations such as statistical bureaus, consulting firms and reinsurance companies, is sometimes used to supplement or corroborate White Mountains' own experience, and can be especially useful for estimating costs of new business. For some lines of business, such as long-tail coverages discussed below, claims data reported in the most recent accident year is often too limited to provide a meaningful basis for analysis due to the typical delay in reporting of claims. For this type of business, White Mountains uses a selected loss ratio method for the initial accident year or years. This is a standard and accepted actuarial reserve estimation method in these circumstances in which the loss ratio is selected based upon information used in pricing policies for that line of business, as well as any publicly available industry data, such as industry pricing, experience and trends, for that line of business.

Uncertainties in estimating ultimate loss and LAE are magnified by the time lag between when a claim actually occurs and when it is reported and settled. This time lag is sometimes referred to as the claim-tail. The claim-tail for most property coverages is typically short (usually a few days up to a few months). The claim-tail for liability/casualty coverages, such as automobile liability, general liability, products liability, multiple peril coverage, and workers compensation, can be especially long as claims are often reported and ultimately paid or settled years, even decades, after the related loss events occur. During the long claims reporting and settlement period, additional facts regarding coverages written in prior accident years, as well as about actual claims and trends may become known and, as a result, White Mountains may adjust its reserves. If management determines that an adjustment is appropriate, the adjustment is booked in the accounting period in which such determination is made in accordance with GAAP. Accordingly, should reserves need to be increased or decreased in the future from amounts currently established, future results of operations would be negatively or positively impacted, as applicable.

Table of Contents

In determining ultimate loss and LAE, the cost to indemnify claimants, provide needed legal defense and other services for insureds and administer the investigation and adjustment of claims are considered. These claim costs are influenced by many factors that change over time, such as expanded coverage definitions as a result of new court decisions, inflation in costs to repair or replace damaged property, inflation in the cost of medical services and legislated changes in statutory benefits, as well as by the particular, unique facts that pertain to each claim. As a result, the rate at which claims arose in the past and the costs to settle them may not always be representative of what will occur in the future. The factors influencing changes in claim costs are often difficult to isolate or quantify and developments in paid and incurred losses from historical trends are frequently subject to multiple and conflicting interpretations. Changes in coverage terms or claims handling practices may also cause future experience and/or development patterns to vary from the past. A key objective of actuaries in developing estimates of ultimate loss and LAE, and resulting IBNR reserves, is to identify aberrations and systemic changes occurring within historical experience and accurately adjust for them so that the future can be projected reliably. Because of the factors previously discussed, this process requires the use of informed judgment and is inherently uncertain.

White Mountains' actuaries use several generally accepted actuarial methods to evaluate its loss reserves, each of which has its own strengths and weaknesses. Management places more or less reliance on a particular method based on the facts and circumstances at the time the reserve estimates are made. These methods generally fall into one of the following categories or are hybrids of one or more of the following categories:

- *Historical paid loss development methods:* These methods use historical loss payments over discrete periods of time to estimate future losses. Historical paid loss development methods assume that the ratio of losses paid in one period to losses paid in an earlier period will remain constant. These methods necessarily assume that factors that have affected paid losses in the past, such as inflation or the effects of litigation, will remain constant in the future. Because historical paid loss development methods do not use case reserves to estimate ultimate losses, they can be more reliable than the other methods discussed below that look to case reserves (such as actuarial methods that use reported losses) in situations where there are significant changes in how case reserves are established by a company's claims adjusters. However, historical paid loss development methods are more leveraged, meaning that small changes in payments have a larger impact on estimates of ultimate losses, than actuarial methods that use reported losses because cumulative loss payments take much longer to equal the expected ultimate losses than cumulative reported amounts. In addition, and for similar reasons, historical paid loss development methods are often slow to react to situations when new or different factors arise than those that have affected paid losses in the past.
- *Historical reported loss development methods:* These methods, like historical paid loss development methods, assume that the ratio of losses in one period to losses in an earlier period will remain constant in the future. However, instead of using paid losses, these methods use reported losses (i.e., the sum of cumulative historical loss payments plus outstanding case reserves) over discrete periods of time to estimate future losses. Historical reported loss development methods can be preferable to historical paid loss development methods because they explicitly take into account open cases and the claims adjusters' evaluations of the cost to settle all known claims. However, historical reported loss development methods necessarily assume that case reserving practices are consistently applied over time. Therefore, when there have been significant changes in how case reserves are established, using reported loss data to project ultimate losses can be less reliable than other methods.
- *Expected loss ratio methods:* These methods are based on the assumption that ultimate losses vary proportionately with premiums. Expected loss ratios are typically developed based upon the information used in pricing, and are multiplied by the total amount of premiums written to calculate ultimate losses. Expected loss ratio methods are useful for estimating ultimate losses in the early years of long-tailed lines of business, when little or no paid or reported loss information is available.
- *Adjusted historical paid and reported loss development methods:* These methods take traditional historical paid and reported loss development methods and adjust them for the estimated impact of changes from the past in factors such as inflation, the speed of claim payments

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

or the adequacy of case reserves. Adjusted historical paid and reported loss development methods are often more reliable methods of predicting ultimate losses in periods of significant change, provided the actuaries can develop methods to reasonably quantify the impact of changes.

White Mountains performs an actuarial review of its recorded reserves each quarter. White Mountains' actuaries compare the previous quarter's estimates of paid loss and LAE, case reserves and IBNR to amounts indicated by actual experience. Differences between previous estimates and actual experience are evaluated to determine whether a given actuarial method for estimating loss and LAE should be relied upon to a greater or lesser extent than it had been in the past. While some variance is expected each quarter due to the inherent uncertainty in loss and LAE, persistent or large variances would indicate that prior assumptions and/or reliance on certain reserving methods may need to be revised going forward.

Table of Contents

The actuarial analysis is a primary consideration for management in determining its best estimate of loss and LAE reserves. In making its best estimate, management also considers other qualitative factors that may lead to a difference between its best estimate of loss and LAE reserves and the actuarial point estimate. Typically, these factors exist when management and the company's actuaries conclude that there is insufficient historical incurred and paid loss information or that trends included in the historical incurred and paid loss information are unlikely to repeat in the future. These factors may include, among others, changes in the techniques used to assess underwriting risk, more accurate and detailed levels of data submitted with reinsurance applications, the uncertainty of the current reinsurance pricing environment, the level of inflation in loss costs, changes in ceding company reserving practices, and legal and regulatory developments.

Reinsurance

White Mountains' reinsurance subsidiaries establish loss and LAE reserves that are estimates of amounts needed to pay claims and related expenses in the future for reinsured events that have already occurred. White Mountains' reinsurance subsidiaries also obtain reinsurance whereby another reinsurer contractually agrees to indemnify White Mountains for all or a portion of the reinsurance risks underwritten by White Mountains. Such arrangements, where one reinsurer provides reinsurance to another reinsurer, are usually referred to as retrocessional reinsurance arrangements. White Mountains establishes estimates of amounts recoverable from retrocessional reinsurance in a manner consistent with the loss and LAE liability associated with reinsurance contracts offered to its customers (the ceding companies), net of an allowance for uncollectible amounts. Net reinsurance loss reserves represent loss and LAE reserves reduced by retrocessional reinsurance recoverable on unpaid losses.

The estimation of net reinsurance loss and LAE reserves is subject to the same risk as the estimation of insurance loss and LAE reserves. In addition to those risk factors which give rise to inherent uncertainties in establishing insurance loss and LAE reserves, the inherent uncertainties of estimating such reserves are even greater for the reinsurer, due primarily to: (1) the claim-tail for reinsurers being further extended because claims are first reported to the original primary insurance company and then through one or more intermediaries or reinsurers, (2) the diversity of loss development patterns among different types of reinsurance treaties or facultative contracts, (3) the necessary reliance on the ceding companies for information regarding reported claims and (4) the differing reserving practices among ceding companies.

As with insurance reserves, the process of estimating reinsurance reserves involves a considerable degree of judgment by management and, as of any given date, is inherently uncertain. Based on the above, such uncertainty may be larger relative to the reserves for a company that principally writes reinsurance compared to an insurance company, and certainty may take a longer time to emerge.

Upon notification of a loss from an insured (typically a ceding company), White Mountains Re establishes case reserves, including LAE reserves, based upon White Mountains Re's share of the amount of reserves established by the insured and White Mountains Re's independent evaluation of the loss. In cases where available information indicates that reserves established by a ceding company are inadequate, White Mountains Re establishes case reserves or IBNR in excess of its share of the reserves established by the ceding company. In addition, specific claim information reported by insureds or obtained through claim audits can alert management to emerging trends such as changing legal interpretations of coverage and liability, claims from unexpected sources or classes of business, and significant changes in the frequency or severity of individual claims where customary. Generally, ceding company audits are not customary outside the United States. This information is often used to supplement estimates of IBNR.

Although loss and LAE reserves are initially determined based on underwriting and pricing analyses, White Mountains Re regularly reviews the adequacy of its recorded reserves by using a variety of generally accepted actuarial methods, including historical incurred and paid loss development methods. If actual loss activity differs substantially from expectations, an adjustment to recorded reserves may be warranted. As

time passes, loss reserve estimates for a given year will rely more on actual loss activity and historical patterns than on initial assumptions based on pricing indications.

The actuarial methods described above are used to calculate a point estimate of loss and LAE reserves for each company within White Mountains Re. These point estimates are then aggregated to produce an actuarial point estimate for the entire segment. Once a point estimate is established, White Mountains Re's actuaries estimate loss reserve ranges to measure the sensitivity of the actuarial assumptions used to set the point estimates. These ranges are calculated from historical variations in loss ratios, payment and reporting patterns by class and type of business.

Table of Contents**Loss and loss adjustment expense reserve summary**

The following table summarizes the loss and LAE reserve activities of White Mountains insurance and reinsurance subsidiaries for the years ended December 31, 2010, 2009 and 2008:

Millions	Year Ended December 31,		
	2010	2009	2008
Gross beginning balance	\$ 6,802.1	\$ 7,400.1	\$ 8,062.1
Less beginning reinsurance recoverable on unpaid losses	(2,790.9)	(3,050.4)	(3,467.9)
Net loss and LAE reserves	4,011.2	4,349.7	4,594.2
Loss and LAE reserves acquired Central National	17.6		
Loss and LAE reserves sold OneBeacon Personal Lines	(231.0)		
Loss and LAE reserves sold CCIC			(109.6)
Loss and LAE reserves sold International American Group			(14.4)
Loss and LAE reserves acquired Helicon			13.7
Losses and LAE incurred relating to:			
Current year losses	2,194.1	2,240.6	2,485.2
Prior year losses	(126.1)	(121.5)	21.2
Total incurred losses and LAE	2,068.0	2,119.1	2,506.4
Accretion of fair value adjustment to net loss and LAE reserves	8.5	12.2	16.9
Foreign currency translation adjustment to net loss and LAE reserves	4.7	23.5	(21.1)
Loss and LAE paid relating to:			
Current year losses	(961.9)	(981.3)	(1,039.8)
Prior year losses	(1,107.0)	(1,512.0)	(1,596.6)
Total loss and LAE payments	(2,068.9)	(2,493.3)	(2,636.4)
Net ending balance	3,810.1	4,011.2	4,349.7
Plus ending reinsurance recoverable on unpaid losses	2,377.1	2,790.9	3,050.4
Gross ending balance	\$ 6,187.2	\$ 6,802.1	\$ 7,400.1

Loss and LAE development 2010

During the year ended December 31, 2010, White Mountains experienced \$126.1 million of net favorable loss reserve development, which consisted of \$51.2 million of net favorable loss reserve development at OneBeacon, \$57.1 million of net favorable loss reserve development at White Mountains Re and \$17.8 million of net favorable loss reserve development at Esurance.

OneBeacon's net favorable loss reserve development was primarily due to lower than expected severity on losses related to professional liability business, multiple peril liability and other general liability lines. The favorable development also included a \$7.5 million release of commercial catastrophe reserves associated with storms occurring in 2004 and 2005.

Specifically, at December 31, 2009, management had revised its expectations downward with respect to future loss emergence in the professional liability business, which had initially been based on market analysis when this business was initiated in 2002 and 2003. However, during 2010, losses continued to be significantly lower than these revised expectations. As a result, management lowered its selected reserves on the earliest years which affected more recent years as total loss expectations for those years are based in part on prior years' results. The impact of this revised estimate was a decrease to professional liability reserves of \$19.3 million.

At December 31, 2009, management had recorded \$7.5 million of reserves for certain claims related to catastrophes from accident years 2004 and 2005 related to OneBeacon's excess property business. During 2010, these claims were resolved for amounts below OneBeacon's policy coverage therefore the reserves were no longer necessary.

At December 31, 2009, based on actuarial techniques described above, management estimated that IBNR related to multiple peril liability was \$170.5 million, or approximately 93% of case reserves of \$184.1 million for accident years 2004 through 2009. During 2010, case incurred loss and allocated LAE (ALAE) was \$65.8 million, which was less than expected for this business. As a result of the lower than expected case incurred loss and ALAE during 2010, the actuarial methods based on case incurred losses produced lower estimated ultimate losses for these accident years. As a result, at December 31, 2010, the IBNR was determined to be \$86.2 million, or approximately 57% of the remaining case reserves. The impact of this revised estimate was a decrease to multiple peril liability reserves of \$18.4 million.

Table of Contents

At December 31, 2009, based on actuarial techniques described above, management estimated that IBNR related to general liability occurrence was \$107.1 million, or approximately 265% of case reserves of \$40.4 million for accident years 2004 through 2009. During 2010, case incurred loss and ALAE was \$33.1 million, which was less than expected for this business. As a result of the lower than expected case incurred loss and ALAE during 2010, the actuarial methods based on case incurred losses produced lower estimated ultimate losses for these accident years. As a result, at December 31, 2010, the IBNR was determined to be \$61.7 million, or approximately 164% of the remaining case reserves. The impact of this revised estimate was a decrease to general liability occurrence reserves of \$12.3 million.

In addition to the development described for the lines of business above, management also recorded a \$6.4 million net increase in IBNR in other lines of business as a result of its review of loss reserves at December 31, 2010. The change in IBNR for each other line of business was not individually significant.

The net favorable loss reserve development at White Mountains Re was primarily related to short-tailed lines, such as property, accident & health and marine, in recent underwriting years. Included in the \$57.1 million favorable loss reserve development was the recognition of \$16.3 million in deferred gains from a retrocessional reinsurance contract that inceptioned in 2000 and was fully collected in 2010.

Esurance's net favorable loss reserve development was primarily due to automobile liability coverages for accident years 2008 and 2009.

Loss and LAE development 2009

During the year ended December 31, 2009, White Mountains experienced \$121.5 million of net favorable loss reserve development, which consisted of \$83.4 million of net favorable loss reserve development at OneBeacon, \$30.4 million of net favorable loss reserve development at White Mountains Re and \$7.7 million of net favorable loss reserve development at Esurance.

OneBeacon's net favorable loss reserve development in 2009 was primarily related to lower than expected severity on losses. The favorable loss reserve development was primarily related to professional liability business, multiple peril liability and other general liability lines and was partially offset by adverse loss reserve development at AutoOne.

Specifically, at December 31, 2008, management had revised its expectations downward with respect to future loss emergence in the professional liability business. The original expectations had initially been based on market analysis when this business was initiated in 2002 and 2003. However, during 2009, losses continued to be significantly lower than these revised expectations. As a result, management lowered its selected reserves on the earliest years of this business. Loss estimates in more recent years were also affected as total loss expectations for later years are based in part on prior years' results. The impact of this revised estimate was a decrease to professional liability reserves of \$60.0 million.

At December 31, 2008, OneBeacon had estimated that future payments from personal injury protection (PIP) litigation from its AutoOne business would be approximately \$7.8 million. During 2009, the legal expenses related to this litigation were higher than expected. As a result, OneBeacon increased estimates of all accident years for AutoOne. The total increase in estimate was \$33.3 million.

At December 31, 2008, based on actuarial techniques described above, OneBeacon estimated that IBNR related to multiple peril liability was \$173.9 million, or approximately 85% of case reserves of \$204.9 million for 2002 and subsequent accident years. During 2009, ALAE was \$36.8 million, which was less than expected for this line of business. As a result of the lower than expected case incurred loss and ALAE during 2009, the actuarial methods based on case incurred losses produced lower estimated ultimate losses for these accident years. As a result, at December 31, 2009, the IBNR was determined to be \$95.4 million, or approximately 73% of the remaining case reserves. The impact of this revised estimate was a decrease to multiple peril liability reserves of \$42.6 million.

At December 31, 2008, based on actuarial techniques described above, OneBeacon estimated that IBNR related to general liability occurrence was \$93.9 million, or approximately 275% of case reserves of \$34.2 million for 2002 and subsequent accident years. During 2009, case incurred loss and ALAE was \$15.6 million, which was less than expected for this line of business. As a result of the lower than expected case incurred loss and ALAE during 2009, the actuarial methods based on case incurred losses produced lower estimated ultimate losses for these accident years. As a result, at December 31, 2009, the IBNR was determined to be \$61.6 million, or approximately 214% of the remaining case reserves. The impact of this revised estimate was a decrease to general liability occurrence reserves of \$14.1 million.

In addition to the development described for the lines of business above, OneBeacon also recorded changes in IBNR in other lines of business as a result of its review of loss reserves at December 31, 2009 that essentially offset. The change in IBNR for each other line of business was not individually significant.

White Mountains Re's net favorable loss reserve development in 2009 is due mainly to a cession under a retrocessional contract related to the 2001 accident year and favorable commutation activity on certain old casualty treaties, partially offset by \$17.7 million of additional losses related to A&E exposures.

White Mountains Re's cession of \$20.0 million of losses under a retrocessional reinsurance contract related to the 2001 accident year. These retroceded losses were substantially offset in pre-tax income by \$10.0 million of ceded premiums and \$7.2 million of interest charges on funds held under the contract.

Table of Contents

Loss and LAE development 2008

During the year ended December 31, 2008, White Mountains experienced \$21.2 million of net adverse loss reserve development, which consisted primarily of \$79.9 million of net adverse loss reserve development at White Mountains Re, partially offset by \$62.0 million of favorable loss reserve development at OneBeacon. Esurance had net adverse loss reserve development of \$4.9 million and the Other Operations segment had net favorable loss reserve development of \$1.6 million.

White Mountains Re's net adverse loss reserve development in 2008 primarily resulted from a comprehensive loss reserve review performed in the second quarter of 2008, as described below, and \$40.5 million of construction defect losses from accident years 2001 and prior recorded in the first quarter of 2008, offset by net favorable loss reserve development from recent accident years.

White Mountains Re management commenced a comprehensive loss reserve review (the "Reserve Review") in the second quarter of 2008, primarily as a result of the \$40.5 million adverse loss reserve development recorded in the first quarter of 2008 referred to above. The Reserve Review was conducted by management, including internal underwriting, claims and actuarial personnel, with assistance from external consultants. The Reserve Review included all of WMRe America's non-asbestos and environmental (A&E) casualty loss reserves as well as certain lines of business at WMRe Sirius. The Reserve Review resulted in \$140.0 million of additional adverse loss reserve development at WMRe America, partially offset by \$85.0 million of favorable loss reserve development at WMRe Sirius during the second quarter of 2008. The adverse loss reserve development at WMRe America was predominantly attributable to its casualty reinsurance book written in the 1996-2002 underwriting years, whereas the favorable loss reserve development at WMRe Sirius was predominantly attributable to its property reinsurance book.

OneBeacon's favorable loss reserve development on prior accident year losses in 2008 was primarily related to lower than expected severity on losses in professional liability business and multiple peril liability and was partially offset by adverse loss reserve development at AutoOne and in legacy run-off.

Specifically, at December 31, 2007, management had revised its expectations downward with respect to future loss emergence in the professional liability business. The original expectations had initially been based on market analysis when this business was initiated in 2002 and 2003. However, during 2008, losses continued to be significantly lower than these revised expectations. As a result, management lowered its selected reserves on the earliest years of this business. Loss estimates in more recent years were also affected as total loss expectations for later years are based in part on prior years' results. The impact of this revised estimate was a decrease to professional liability reserves of \$50.5 million.

At December 31, 2007, OneBeacon had estimated that future payments from PIP litigation from OneBeacon's NYAIP business would be approximately \$14.0 million. During 2008, the legal expenses related to this litigation were higher than expected as the 2002 accident year neared conclusion. As a result, OneBeacon increased estimates of all accident years for NYAIP and other similar business in New York. The total increase in estimate was \$10.8 million.

At December 31, 2007, based on actuarial techniques described above, OneBeacon estimated that IBNR related to multiple peril liability was \$137.0 million, or approximately 64% of case reserves of \$212.8 million for 2002 and subsequent accident years. During 2008, case incurred

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

loss and allocated LAE was \$16.2 million, which was less than expected for this line of business. As a result of the lower than expected case incurred loss and ALAE during 2008, the actuarial methods based on case incurred losses produced lower estimated ultimate losses for these accident years. As a result, at December 31, 2008, the IBNR was determined to be \$86.9 million, or approximately 64% of the remaining case reserves. The impact of this revised estimate was a decrease to multiple peril liability reserves of \$33.8 million.

At December 31, 2007, based on actuarial techniques described above, OneBeacon estimated that IBNR related to workers compensation was \$41.1 million, or approximately 96% of case reserves of \$43.0 million for 2005 and subsequent accident years. During 2008, case incurred loss and ALAE was \$20.2 million, which was greater than expected for this line of business. As a result of the higher than expected case incurred loss and ALAE during 2008, the actuarial methods based on case incurred losses produced higher estimated ultimate losses for these accident years. As a result, at December 31, 2008, the IBNR was determined to be \$34.8 million, or approximately 81% of the remaining case reserves. The impact of this revised estimate was an increase to workers compensation reserves of \$13.9 million.

In addition to the development described for the lines of business above, OneBeacon also recorded a \$2.4 million net decrease in IBNR in other lines of business as a result of its review of loss reserves at December 31, 2008. The change in IBNR for each other line of business was not individually significant.

Table of Contents

Fair value adjustment to loss and LAE reserves

In connection with purchase accounting for the acquisitions of OneBeacon, Scandinavian Re, and Stockbridge Insurance Company, White Mountains was required to adjust loss and LAE reserves and the related reinsurance recoverables to fair value on their respective acquired balance sheets. The net reduction to loss and LAE reserves is being recognized through an income statement charge ratably with and over the period the claims are settled.

White Mountains recognized \$8.5 million, \$12.2 million and \$16.9 million of such charges, recorded as loss and LAE during 2010, 2009 and 2008. As of December 31, 2010, the pre-tax un-accreted adjustment was \$21.0 million.

The fair values of OneBeacon's loss and LAE reserves and related reinsurance recoverables acquired on June 1, 2001, Scandinavian Re's loss and LAE reserves and related reinsurance recoverables acquired on April 16, 2004, and Stockbridge Insurance Company's loss and LAE reserves and related reinsurance recoverables acquired on December 22, 2006 were based on the present value of their expected cash flows with consideration for the uncertainty inherent in both the timing of, and the ultimate amount of, future payments for losses and receipts of amounts recoverable from reinsurers. In estimating fair value, management discounted the nominal loss reserves of OneBeacon (net of the effects of reinsurance obtained from the NICO Cover, as defined below and the GRC Cover, as defined below), Scandinavian Re and Stockbridge Insurance Company to their present value using an applicable risk-free discount rate. The series of future cash flows related to such loss payments and reinsurance recoveries were developed using OneBeacon's, Scandinavian Re's and Stockbridge Insurance Company's historical loss data. The resulting discount was reduced by the price for bearing the uncertainty inherent in OneBeacon's, Scandinavian Re's and Stockbridge Insurance Company's net loss reserves in order to estimate fair value. This was approximately 11%, 12% and 2% of the present value of the expected underlying cash flows of the loss reserves and reinsurance recoverables of OneBeacon, Scandinavian Re and Stockbridge Insurance Company, respectively, which is believed to be reflective of the cost OneBeacon, Scandinavian Re and Stockbridge Insurance Company would incur if they had attempted to reinsure the full amount of its net loss and LAE reserves with a third party reinsurer.

Asbestos and environmental loss and loss adjustment expense reserve activity

White Mountains' reserves include provisions made for claims that assert damages from asbestos and environmental related exposures. Asbestos claims relate primarily to injuries asserted by those who came in contact with asbestos or products containing asbestos. Environmental claims relate primarily to pollution and related clean-up cost obligations, particularly as mandated by U.S. federal and state environmental protection agencies. In addition to the factors described above regarding the reserving process, White Mountains estimates its A&E reserves based upon, among other factors, facts surrounding reported cases and exposures to claims, such as policy limits and deductibles, current law, past and projected claim activity and past settlement values for similar claims, as well as analysis of industry studies and events, such as recent settlements and asbestos-related bankruptcies. The cost of administering A&E claims, which is an important factor in estimating loss reserves, tends to be higher than in the case of non-A&E claims due to the higher legal costs typically associated with A&E claims.

In the third quarter 2010, WMRe America completed an in-depth analysis of its asbestos exposure, which was an update to the 2007 asbestos study described below. The main focus of the analysis was on the internal claims analysis of all treaty and facultative contracts likely to have asbestos exposure at June 30, 2010. This analysis entailed examining total expected asbestos losses and LAE from a variety of information sources, including asbestos studies, data reported to WMRe America and external benchmarking scenarios. The combined effect of all these estimates resulted in no further increase in IBNR for asbestos losses and LAE as a result of the 2010 in-depth analysis.

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

In 2007, White Mountains Re completed a detailed, ground-up asbestos exposure study. The study analyzed potential exposure to loss of all insureds that had reported at least \$250,000 in losses to WMRe America through reinsurance contracts as of June 30, 2007 and a significant sample of all other insureds that had reported losses of less than \$250,000, whose sample findings were extrapolated to the entire population. The combined effect of all these estimates resulted in an increase of \$51.6 million in IBNR for asbestos losses and LAE in 2007.

In 2008, White Mountains Re recorded \$11.0 million of IBNR losses and LAE, reflecting an increase in paid losses and LAE recorded during the year. This amount was developed by analyzing the claim payment activity WMRe America experienced and comparing this activity to what was expected to emerge since the December 2007 asbestos study. In 2009, White Mountains Re recorded \$18.4 million of asbestos losses based on a similar claims payment review. In 2010, prior to the in-depth analysis described above, White Mountains Re recognized \$7.3 million of additional asbestos losses, also based on a claims payment review.

White Mountains Re reviewed WMRe America's exposure to environmental losses using industry benchmarks such as survival ratios, IBNR to case reserve ratios, and reported and paid environmental claim activity. Based on this information, management did not increase environmental reserves. White Mountains Re's A&E three year survival ratio was 12.5 years at December 31, 2010 and 12.3 years at December 31, 2009.

Table of Contents

Immediately prior to White Mountains' acquisition of OneBeacon, Aviva caused OneBeacon to purchase a reinsurance contract with National Indemnity Company (NICO) under which OneBeacon is entitled to recover from NICO up to \$2.5 billion in the future for asbestos claims arising from business written by OneBeacon in 1992 and prior, environmental claims arising from business written by OneBeacon in 1987 and prior, and certain other exposures (the NICO Cover). Under the terms of the NICO Cover, NICO receives the economic benefit of reinsurance recoverables from certain of OneBeacon's third party reinsurers in existence at the time the NICO Cover was executed (Third Party Recoverables). As a result, the Third Party Recoverables serve to protect the \$2.5 billion limit of NICO coverage for the benefit of OneBeacon. Any amounts uncollectible from third party reinsurers due to dispute or the reinsurers' financial inability to pay are covered by NICO under its agreement with OneBeacon. Third Party Recoverables are typically for the amount of loss in excess of a stated level each year. Of claim payments in the past 11 years, approximately 44% of asbestos and environmental losses have been recovered under the historical third party reinsurance.

In September 2008, OneBeacon completed a study of its A&E exposures. This study considered, among other items, (1) facts, such as policy limits, deductibles and available third party reinsurance, related to reported claims; (2) current law; (3) past and projected claim activity and past settlement values for similar claims; (4) industry studies and events, such as recent settlements and asbestos-related bankruptcies; and (5) collectibility of third-party reinsurance. Based on the study, OneBeacon increased its best estimate of its incurred losses ceded to NICO under the NICO Cover, net of underlying reinsurance, by \$83.4 million to \$2.2 billion, which is within the \$2.5 billion coverage provided by the NICO Cover. The increase in the estimate of incurred losses was principally driven by raised projections for claims related to asbestos. Due to the NICO Cover, there was no impact to income or equity from the change in estimate.

As noted above, OneBeacon estimates that on an incurred basis it has used approximately \$2.2 billion of the coverage provided by NICO at December 31, 2010. Since entering into the NICO Cover, approximately 5% of the \$2.2 billion of utilized coverage relates to uncollectible Third Party Recoverables and settlements on Third Party Recoverables through December 31, 2010. Net losses paid by NICO totaled approximately \$1.4 billion as of December 31, 2010, with \$182.1 million paid in 2010. Asbestos payments during 2010 reflect payments resulting from intensified efforts by claimants to resolve asbestos claims prior to enactment of potential U.S. federal asbestos legislation. To the extent that OneBeacon's estimate of ultimate A&E losses and Third Party Recoverables differs from actual experience, the remaining protection under the NICO Cover may be more or less than the \$320.2 million that OneBeacon estimates remained at December 31, 2010.

White Mountains' reserves for A&E losses at December 31, 2010 represent management's best estimate of its ultimate liability based on information currently available. However, as case law expands, and medical and clean-up costs increase and industry settlement practices change, White Mountains may be subject to asbestos and environmental losses beyond currently estimated amounts. White Mountains cannot reasonably estimate at the present time loss reserve additions arising from any such future adverse developments and cannot be sure that allocated loss reserves, plus the remaining capacity under the NICO Cover and other reinsurance contracts, will be sufficient to cover additional liability arising from any such adverse developments.

Table of Contents

The following tables summarize reported asbestos and environmental loss and LAE reserve activities (gross and net of reinsurance) for OneBeacon, White Mountains Re and White Mountains Other Operations, consisting of the International American Group (until its disposition in 2008), for the years ended December 31, 2010, 2009 and 2008, respectively:

Table of Contents**NOTE 4. Third Party Reinsurance**

In the normal course of business, White Mountains insurance and reinsurance subsidiaries may seek to limit losses that may arise from catastrophes or other events by reinsuring with third party reinsurers. White Mountains remains liable for risks reinsured in the event that the reinsurer does not honor its obligations under reinsurance contracts. The effects of reinsurance on White Mountains insurance and reinsurance subsidiaries written and earned premiums and on losses and LAE were as follows:

Millions	Year ended December 31, 2010				Total
	OneBeacon	White Mountains Re	Esurance	Other Insurance Operations	
Written premiums:

OneBeacon

In the ordinary course of its business, OneBeacon purchases reinsurance from high-quality, highly rated, third party reinsurers in order to minimize loss from large risks or catastrophic events.

The timing and size of catastrophe losses are unpredictable and the level of losses experienced in any year could be material to OneBeacon's operating results and financial position. Examples of catastrophes include losses caused by earthquakes, wildfires, hurricanes and other types of storms and terrorist acts. The extent of losses caused by catastrophes is a function of the amount and type of insured exposure in the area affected by the event as well as the severity of the event. OneBeacon continually assesses and implements programs to manage its exposure to catastrophe losses through individual risk selection and by limiting its concentration of insurance written in catastrophe-prone areas, such as coastal regions. In addition, OneBeacon imposes wind deductibles on existing coastal windstorm exposures. OneBeacon uses probable maximum loss (PML) forecasting to quantify its exposure to catastrophic losses. PML is a statistical modeling technique that measures a company's catastrophic exposure as the probable maximum loss in a given time period.

Since the terrorist attacks of September 11, 2001, OneBeacon has sought to mitigate the risk associated with any future terrorist attacks by limiting the aggregate insured value of policies in geographic areas with exposure to losses from terrorist attacks. This is accomplished by either limiting the total insured values exposed, or, where applicable, through the use of terrorism exclusions.

In December of 2007, the United States government extended the Terrorism Risk Insurance Act of 2002 (the Terrorism Act) until December 31, 2014. The Terrorism Act was originally enacted in 2002 and established a federal backstop for commercial property and casualty losses, including workers compensation, resulting from acts of terrorism by or on behalf of any foreign person or foreign interest. As extended, the law now covers domestic acts of terrorism. The law limits the industry's aggregate liability by requiring the federal government to share 85% of certified losses once a company meets a specific retention or deductible as determined by its prior year's direct written premiums and limits the

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

aggregate liability to be paid by the government and industry without further action by Congress at \$100 billion. In exchange for this backstop, primary insurers are required to make coverage available to commercial insureds for losses from acts of terrorism as specified in the Terrorism Act. The following types of coverage are excluded from the program: commercial automobile, burglary and theft, surety, farmowners multi-peril and all professional liability coverage except directors and officers coverage.

OneBeacon estimates its individual retention level for commercial policies subject to the Terrorism Act to be approximately \$135 million in 2011, which is based on 2010's net written premiums. The federal government will pay 85% of covered terrorism losses that exceed OneBeacon's or the industry's retention levels in 2011 up to a total of \$100 billion.

Table of Contents

OneBeacon seeks to further reduce its potential loss from catastrophe exposures through the purchase of catastrophe reinsurance. Effective July 1, 2010, OneBeacon renewed its property catastrophe reinsurance program through June 30, 2011. The program provides coverage for OneBeacon's personal and commercial property business as well as certain acts of terrorism. Under the program, the first \$80.0 million of losses resulting from any single catastrophe are retained and the next \$195.0 million of losses resulting from the catastrophe are reinsured. Any loss above \$275.0 million would be retained. In the event of a catastrophe, OneBeacon's property catastrophe reinsurance program is reinstated for the remainder of the original contract term by paying a reinstatement premium that is based on the percentage of coverage reinstated and the original property catastrophe coverage premium.

OneBeacon had entered into a 30% quota share agreement with a group of reinsurers that ran from January 1, 2009 through December 31, 2009, and had renewed the agreement effective January 1, 2010. Through June 30, 2010 OneBeacon ceded \$25.6 million of written premiums from its Northeast homeowners business written through OneBeacon Insurance Company (OBIC) and its subsidiary companies, along with Adirondack and New Jersey Skylands Insurance Association. Effective July 1, 2010, the closing date of the Personal Lines Transaction, the agreement was amended to remove OneBeacon as a signatory. During the year ended December 31, 2009, OneBeacon ceded \$59.9 million under this quota share agreement.

OneBeacon's property catastrophe reinsurance program does not cover personal or commercial property losses resulting from nuclear events or biological, chemical or radiological terrorist attacks or losses resulting from acts of terrorism as defined under the Terrorism Act, as amended, committed by an individual or individuals acting on behalf of any foreign person or foreign interest.

OneBeacon also purchases property-per-risk reinsurance coverage for certain risks to reduce large loss volatility. The property-per-risk reinsurance program reinsures losses in excess of \$10 million up to \$100 million. Individual risk facultative reinsurance may be purchased above \$100 million where it is deemed appropriate. The property-per-risk treaty also provides one limit of reinsurance protection for losses in excess of \$10 million up to \$100 million on an individual risk basis for terrorism losses. However, nuclear, biological, chemical and radiological terrorist attacks are not covered.

OneBeacon also maintains a casualty reinsurance program that provides protection for individual risk or catastrophe losses involving workers compensation, general liability, automobile liability, professional liability or umbrella liability in excess of \$5 million up to \$21 million.

In 2001, OneBeacon purchased reinsurance contracts with two reinsurance companies rated AA+ (Very Strong, the second highest of twenty-one financial strength ratings) by Standard & Poor's and A++ (Superior, the highest of fifteen ratings) by A.M. Best. One contract is a reinsurance cover with NICO which entitles OneBeacon to recover up to \$2.5 billion in ultimate loss and LAE incurred related primarily to A&E claims arising from business written by OneBeacon's predecessor prior to 1992 for asbestos claims and 1987 for environmental claims. As of December 31, 2010, OneBeacon has ceded estimated incurred losses of approximately \$2.2 billion to the NICO Cover. Through December 31, 2010 \$1.4 billion of these incurred losses have been paid by NICO. Since entering into the NICO Cover, approximately 5% (\$110 million) of the \$2.2 billion of utilized coverage relates to uncollectible Third Party Recoverables and settlements on Third Party Recoverables through December 31, 2010.

The other contract is a reinsurance cover with General Reinsurance Corporation, or GRC, for up to \$570 million of additional losses on all claims arising from accident years 2000 and prior. As of December 31, 2010, OneBeacon has ceded estimated incurred losses of \$550 million to the GRC Cover. Pursuant to the GRC Cover, OneBeacon is not entitled to recover losses to the full contract limit if such losses are reimbursed by GRC more quickly than anticipated at the time the contract was signed. OneBeacon intends to only seek reimbursement from GRC for claims which result in payment patterns similar to those supporting the recoverables recorded pursuant to the GRC Cover. The economic cost of not

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

submitting certain other eligible claims to GRC is primarily the investment spread between the rate credited by GRC and the rate achieved by OneBeacon on its investments. This cost, if any, is expected to be nominal.

At December 31, 2010, OneBeacon had \$44.5 million of reinsurance recoverables on paid losses and \$2,069.7 million (gross of \$176.5 million in purchase accounting adjustments, as described in **Note 3**) that will become recoverable if claims are paid in accordance with current reserve estimates. Reinsurance contracts do not relieve OneBeacon of its obligation to its policyholders. Therefore, collectability of balances due from reinsurers is critical to its financial strength.

Table of Contents

The following table provides a listing of OneBeacon's top reinsurers, excluding industry pools and associations and affiliates of White Mountains, based upon recoverable amounts, the percentage of total reinsurance recoverables and the reinsurer's A.M. Best rating.

Top Reinsurers (\$ in millions)	Balance at December 31, 2010	% of Total	A.M. Best Rating(1)
National Indemnity Company and General Reinsurance Corporation (2)	\$ 1,594.4	75%	A++
The Hanover	82.7	4%	A
Tokio Marine and Nichido Fire (3)	66.7	3%	A++
Tower	66.4	3%	A-
Munich Reinsurance America	32.2	2%	A+

(1) A.M. Best ratings as detailed above are: A++ (Superior, which is the highest of fifteen financial strength ratings), A+ (Superior, which is the second highest of fifteen financial strength ratings), A (Excellent, which is the third highest of fifteen financial strength ratings), and A- (Excellent, which is the fourth highest of fifteen financial strength ratings). Ratings are as of December 31, 2010.

(2) Includes \$320.2 of Third Party Recoverables, which NICO would pay under the terms of the NICO Cover if they are unable to collect from third party reinsurers.

(3) Includes \$40.4 of reinsurance recoverables from various third party reinsurers that are guaranteed by Tokio Marine and Nichido Fire under the terms of a 100% quota share reinsurance agreement between Houston General Insurance Company and Tokio Marine and Nichido Fire.

White Mountains Re

White Mountains Re's reinsurance protection primarily consists of pro-rata and excess of loss protections to cover aviation, trade credit, and certain property exposures. White Mountains Re's property reinsurance provides both proportional and non-proportional protections for Europe, the Americas, Asia, the Middle East, and Australia. This reinsurance is designed to increase underwriting capacity where appropriate, and to reduce exposure both to large catastrophe losses and to a frequency of smaller loss events. Attachment points and coverage limits vary by region around the world. Reinsurance contracts do not relieve White Mountains Re of its obligation to its ceding companies. Therefore, collectability of balances due from its retrocessional reinsurers is critical to White Mountains Re's financial strength.

Beginning April 1, 2008, WMRe has annually purchased from multiple reinsurers \$65.0 million of total limit annually of group excess of loss retrocessional protection for its non-U.S. and non-Japan earthquake-related exposures. This catastrophe excess of loss covers all of the White Mountains Re operating subsidiaries, and is effective through March 31, 2011. During 2010 White Mountains Re recovered the full \$65.0 million limit under this cover as a result of the Chilean Earthquake. Additionally, in 2010 White Mountains Re purchased industry loss warranties that cover adverse impact of New Madrid-related earthquake exposures, which were not renewed for 2011. Also in 2010 and 2009 White Mountains Re purchased industry loss warranties that cover adverse impact of the occurrence of wind and flood catastrophe events in Europe with available limits of \$20.0 million.

White Mountains Re's aviation reinsurance program is intended to reduce exposure to a frequency of small losses, a single large loss or a combination of both. Coverages are generally provided on an industry loss warranty basis.

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

In 2010, White Mountains Re ceded 25% of its trade credit business under a quota share retrocession, which supported growth in this line. The treaty was renewed for 2011 at a 19% cession percentage.

In 2000, WMR America purchased a reinsurance contract from Imagine Re (the Imagine Cover) to reduce its statutory operating leverage and protect its statutory surplus from adverse development relating to A&E exposures as well as the reserves assumed in certain recent acquisitions. In accordance with ASC 944, the amounts related to reserves transferred to Imagine Re for liabilities incurred as a result of past insurable events were accounted for as retroactive reinsurance. At December 31, 2009, WMR America had a reinsurance recoverable balance of \$125.7 million due under the Imagine Cover. This balance was fully collateralized with WMR America as the beneficiary of invested assets in a trust. During 2010, WMR America determined that the full reinsurance recoverable under the Imagine Cover was due. Accordingly, WMR America billed Imagine Re for the remaining balance due under the Imagine Cover and withdrew this amount from the trust. As of December 31, 2010, WMR America had collected all amounts due from Imagine Re.

At December 31, 2009, WMR America had \$16.3 million of unamortized deferred gains related to the Imagine Cover. During 2010, as a result of the collection of the reinsurance recoverable balance due under the Imagine Cover, WMR America recognized the remaining \$16.3 million of unamortized deferred gains. White Mountains Re recognized \$4.6 million of such deferred gains during 2009 and 2008.

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

Table of Contents

At December 31, 2010, White Mountains Re had \$18.6 million of reinsurance recoverables on paid losses and \$450.8 million of reinsurance that will become recoverable if claims are paid in accordance with current reserve estimates. The following table provides a listing of White Mountains Re's top reinsurers based upon recoverable amounts, the percentage of total recoverables and the reinsurer's A.M. Best Rating.

Top Reinsurers (\$ in millions)	Balance at December 31, 2010	% of Total	A.M. Best Rating(1)	% Collateralized
London Life (2)	\$ 52.9	11%	A	100%
Lloyds of London(3)	51.7	11%	A	3%
Olympus (2)	50.4	11%	NR-5	100%
General Reinsurance Corporation	44.8	10%	A++	1%
Swiss Re Group	40.6	9%	A	2%

(1) A.M. Best ratings as detailed above are: NR-5 (Not formally followed), A++ (Superior, which is the highest of fifteen ratings), and A (Excellent, which is the third highest of fifteen ratings).

(2) Non-U.S. insurance entities. Balances are fully collateralized through funds held, letters of credit or trust agreements.

(3) Represents the total of reinsurance recoverables due to White Mountains Re from all Lloyds Syndicates.

NOTE 5. Investment Securities

White Mountains' net investment income is comprised primarily of interest income associated with White Mountains' fixed maturity investments, dividend income from its equity investments and interest income from its short-term investments. Net investment income for 2010, 2009 and 2008 consisted of the following:

Millions	Year Ended December 31,		
	2010	2009	2008
Investment income:			
Fixed maturity investments	\$ 214.9	\$ 266.7	\$ 346.0
Short-term investments	3.1	5.7	44.4
Common equity securities	10.8	4.9	28.1
Convertible fixed maturity investments	6.0	8.2	6.8
Other long-term investments	6.0	4.2	1.4
Interest on funds held under reinsurance treaties	(1.7)	(7.3)	.5
Total investment income	239.1	282.4	427.2
Third-party investment expenses	(10.6)	(10.0)	(16.9)
Net investment income, pre-tax	\$ 228.5	\$ 272.4	\$ 410.3

Net realized and unrealized investment gains and losses

White Mountains recognized \$95.9 million, \$384.6 million, and \$(1,107.1) million of net realized and unrealized investment gains (losses) for the years ended December 31, 2010, 2009, and 2008.

Net realized investment gains (losses)

Net realized investment gains (losses) for 2010, 2009 and 2008 consisted of the following:

Millions	Year Ended December 31,		
	2010	2009	2008
Fixed maturity investments	\$ 107.4	\$ (6.8)	\$ (92.3)
Short-term investments		.2	
Common equity securities	6.9	(47.8)	(385.7)
Convertible fixed maturity investments	17.2	15.9	(17.7)
Other long-term investments	15.9	(31.9)	(23.0)
Net realized investment gains (losses), pre-tax	147.4	(70.4)	(518.7)
Income taxes attributable to realized investment gains and (losses)	(45.9)	15.0	165.4
Net realized investment gains (losses), after-tax	\$ 101.5	\$ (55.4)	\$ (353.3)

Table of Contents

White Mountains recognized gross realized investment gains of \$218.2 million, \$161.5 million and \$138.7 million and gross realized investment losses of \$70.8 million, \$231.9 million and \$657.4 million on sales of investment securities during 2010, 2009 and 2008.

As of December 31, 2010 and 2009, White Mountains reported \$22.4 million and \$9.1 million in accounts payable on unsettled investment purchases and \$40.0 million and \$27.6 million in accounts receivable on unsettled investment sales.

Net unrealized investment gains (losses)

The following table summarizes changes in the carrying value of investments measured at fair value:

Millions	Year Ended December 31, 2010		
	Net unrealized gains (losses)	Net foreign currency gains (losses)	Total changes in fair value reflected in earnings
Fixed maturities	\$ (71.9)	\$ (53.8)	\$ (125.7)

Common equity securities	\$ 415.5	\$ 40.2	\$ (8.5)	\$ 11.3	\$ 458.5
Convertible fixed maturities	\$ 210.9	\$ 22.3	\$ (.1)	\$	\$ 233.1
Other long-term investments	\$ 309.0	\$ 51.3	\$ (19.9)	\$.9	\$ 341.3

Sales and maturities of investments, excluding short-term investments, totaled \$4,883.9 million, \$4,068.3 million and \$6,412.2 million for the years ended December 31, 2010, 2009 and 2008. There were no non-cash exchanges or involuntary sales of investment securities during 2010, 2009 or 2008.

Investments held on deposit or as collateral

As of December 31, 2010 and 2009, investments of \$314.1 million, which includes \$29.0 million related to investments held in a trust established in conjunction with the Personal Lines Transaction, and \$436.6 million were held in trusts required to be maintained in relation to various reinsurance agreements. White Mountains' consolidated insurance and reinsurance operations are required to maintain deposits with

certain insurance regulatory agencies in order to maintain their insurance licenses. The fair value of such deposits which are included within total investments totaled \$363.2 million and \$243.2 million as of December 31, 2010 and 2009.

Table of Contents

Fair value measurements at December 31, 2010

White Mountains' invested assets measured at fair value include fixed maturity securities, common and preferred equity securities, convertible fixed maturity securities and other long-term investments, such as hedge funds and private equities. Fair value measurements reflect management's best estimate of the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. Fair value measurements fall into a hierarchy with three levels based on the nature of the inputs. Fair value measurements based on quoted prices in active markets for identical assets are at the top of the hierarchy (Level 1), followed by fair value measurements based on observable inputs that do not meet the criteria for Level 1, including quoted prices in inactive markets and quoted prices in active markets for similar, but not identical instruments (Level 2). Measurements based on unobservable inputs, including a reporting entity's estimates of the assumptions that market participants would use are at the bottom of the hierarchy (Level 3).

White Mountains uses quoted market prices or other observable inputs to estimate fair value for the vast majority of its investment portfolio. Investments valued using Level 1 inputs include fixed maturities, primarily U.S. Treasury securities, publicly-traded common equities and short-term investments, which include U.S. Treasury Bills. Investments valued using Level 2 inputs consist of fixed maturities, including corporate debt, state and other government debt, convertible fixed maturity securities and mortgage-backed and asset-backed securities. Fair value estimates for investments classified as Level 3 measurements include investments in hedge funds, private equity funds and certain investments in fixed maturities and common equity securities. Fair value measurements for securities for which observable inputs are unavailable are estimated using industry standard pricing models and observable inputs such as benchmark interest rates, matrix pricing, market comparables, broker quotes, issuer spreads, bids, offers, credit ratings, prepayment speeds and other relevant inputs. In circumstances where quoted prices or observable inputs are adjusted to reflect management's best estimate of fair value, such fair value measurements are considered a lower level measurement in the fair value hierarchy.

White Mountains employs a number of procedures to assess the reasonableness of the fair value measurements for its other long-term investments, including obtaining and reviewing each fund's audited financial statements and discussing each fund's pricing with the fund's manager. However, since the fund managers do not provide sufficient information to evaluate the pricing inputs and methods for each underlying investment, the inputs are considered to be unobservable. Accordingly, the fair values of White Mountains' investments in hedge funds and private equity funds have been classified as Level 3 measurements. The fair value of White Mountains' investments in hedge funds and private equity funds has been estimated using net asset value.

In addition to the investments described above, White Mountains has \$77.8 million and \$51.4 million of investment-related liabilities recorded at fair value and included in other liabilities as of December 31, 2010 and 2009. These liabilities relate to securities that have been sold short by limited partnerships in which White Mountains has investments and is required to consolidate under GAAP. All of the liabilities included have been deemed to have a Level 1 designation.

Table of Contents**Fair Value Measurements by Level**

The following tables summarize White Mountains' fair value measurements for investments at December 31, 2010 and 2009, by level. The fair value measurements for derivative assets associated with White Mountains' variable annuity business are presented in **Note 8**.

Millions	Fair value	December 31, 2010

Table of Contents*Mortgage-backed, Asset-backed Securities*

White Mountains purchases commercial and residential mortgage-backed securities to maximize its fixed income portfolio's risk adjusted returns in the context of a diversified portfolio. White Mountains' non-agency commercial mortgage-backed portfolio (CMBS) is generally short tenor and structurally senior, with more than 30 points of subordination on average for fixed rate CMBS and more than 50 points of subordination on average for floating rate CMBS as of December 31, 2010. In general, subordination represents the percentage principal loss on the underlying collateral that would be absorbed by other securities lower in the capital structure before the more senior security incurs any loss. White Mountains believes this structural protection mitigates the risk of loss tied to the refinancing challenges facing the commercial real estate market. As of December 31, 2010, on average approximately 8% of the underlying loans were reported as non-performing for all CMBS held by White Mountains. White Mountains is not an originator of residential mortgage loans and held negligible amounts of residential mortgage-backed securities (RMBS) categorized as sub-prime as of December 31, 2010. In addition, White Mountains' investments in hedge funds and private equities contain negligible amounts of sub-prime mortgage-backed securities at December 31, 2010. White Mountains considers sub-prime to be those mortgage-backed securities that have underlying loan pools that exhibit weak credit characteristics or those that are issued from dedicated sub-prime shelves or dedicated second-lien shelf registrations (i.e., White Mountains considers investments backed primarily by second-liens to be a sub-prime risk regardless of credit scores or other metrics).

White Mountains categorizes mortgage-backed securities as non-prime (also called Alt A or A-) that are backed by collateral that has overall credit quality between prime and sub-prime based on White Mountains' review of the characteristics of their underlying mortgage loan pools, such as credit scores and financial ratios. As of December 31, 2010, \$18.3 million of White Mountains' mortgage-backed security holdings were classified as non-prime, with more than 20 points of subordination on average. White Mountains' non-agency residential mortgage-backed portfolio is generally of moderate average life and structurally senior. White Mountains does not own any collateralized debt obligations, including residential mortgage-backed collateralized debt obligations.

Table of Contents*Other long-term investments*

White Mountains holds investments in hedge funds and private equity funds, which are included in other long-term investments. The fair value of these investments has been estimated using the net asset value of the funds. At December 31, 2010, White Mountains held limited partnership and limited liability corporation investments in 18 hedge funds and 34 private equity funds. The largest investment in a single fund was \$49.2 million at December 31, 2010. The following table summarizes investments in hedge funds and private equity interests by investment objective and sector at December 31, 2010 and December 31, 2009:

Millions	December 31, 2010		December 31, 2009	
	Fair Value	Unfunded Commitments	Fair Value	Unfunded Commitments

Total hedge and private equity funds included in other long-term investments	\$ 319.5	\$ 88.7	\$ 311.0	\$ 143.0

At December 31, 2010, other long-term investments also include \$21.2 million of an investment in a tax advantaged federal affordable housing development fund. The fund has unfunded commitments of \$7.5 million at December 31, 2010.

Redemption of investments in certain hedge funds is subject to restrictions including lock-up periods where no redemptions or withdrawals are allowed, restrictions on redemption frequency and advance notice periods for redemptions. Amounts requested for redemptions remain subject to market fluctuations until the redemption effective date, which generally falls at the end of the defined redemption period. The following summarizes the December 31, 2010 fair value of hedge funds subject to restrictions on redemption frequency and advance notice period requirements for investments in active hedge funds:

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

Millions Redemption frequency	Notice Period				Total

Table of Contents

Certain of the hedge fund investments in which White Mountains is invested are no longer active and are in process of disposing of their underlying investments. Distributions from such funds are remitted to investors as the fund's underlying investments are liquidated. At December 31, 2010, distributions of \$8.0 million were outstanding from these investments. The actual amount of the final distribution remittances remain subject to market fluctuations. The date at which such remittances will be received is not determinable at December 31, 2010.

White Mountains has also submitted redemption requests for certain of its investments in active hedge funds. At December 31, 2010 redemptions of \$6.5 million have been submitted. White Mountains expects to receive these funds within the next 12 months. Redemptions are recorded as receivables when approved by the hedge funds and when no longer subject to market fluctuations.

Investments in private equity funds are generally subject to a lock-up period during which investors may not request a redemption. Distributions prior to the expected termination date of the fund may be limited to dividends or proceeds arising from the liquidation of the fund's underlying investments. In addition, certain private equity funds provide an option to extend the lock-up period at either the sole discretion of the fund manager or upon agreement between the fund and the investors. At December 31, 2010, investments in private equity funds were subject to lock-up periods as follows:

Millions		1-3 years	3-5 years	5-10 years	>10 years	Total
Private Equity Funds	expected lock-up period remaining	\$ 19.7	\$ 49.2	\$ 72.6	\$ 18.3	\$ 159.8

Rollforward of Fair Value Measurements by Level

White Mountains uses quoted market prices where available as the inputs to estimate fair value for its investments in active markets. Such measurements are considered to be either Level 1 or Level 2 measurements, depending on whether the quoted market price inputs are for identical securities (Level 1) or similar securities (Level 2). Level 3 measurements for fixed maturities at December 31, 2010 are comprised of securities for which the estimated fair value has not been determined based upon quoted market price inputs for identical or similar securities.

The following table summarizes the changes in White Mountains' fair value measurements by level for the year ended December 31, 2010:

Millions	Level 1 Investments	Level 2 Investments	Fixed Maturities	Level 3 Investments		Other long-term investments	Total
				Common equity securities	Convertible fixed maturities		
Balance at January 1, 2010	\$ 3,211.8	\$ 5,434.1	\$ 119.1	\$ 122.2	\$	\$ 325.6(3)	\$ 9,212.8(3)
Total realized and unrealized gains (losses)(1)	125.5	46.0	5.7	(6.6)		32.4	203.0
Amortization/Accretion	1.2	(41.7)	(1.6)				(42.1)
Purchases(2)	19,983.2	5,955.7	81.9	.2		65.4	26,086.4
Sales	(21,248.6)	(5,361.8)	(25.3)	(44.6)		(104.2)	(26,784.5)

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

Transfers in		5.6		51.4		9.4		15.0		81.4
Transfers out				(15.0)		(51.4)				(66.4)
Balance at December 31, 2010	\$	2,078.7	\$	6,068.7	\$	137.8	\$	71.2	\$	334.2(4)
										\$ 8,690.6(4)

(1) Includes unrealized foreign exchange gains and losses recognized as a component of other comprehensive income in reporting currency translation.

(2) Includes investments acquired as part of the Central National acquisition.

(3) Excludes carrying value of \$15.7 associated with other long-term investment limited partnerships accounted for using the equity method.

(4) Excludes carrying value of \$41.9 associated with other long-term investment limited partnerships accounted for using the equity method.

Fair Value Measurements transfers between levels

Transfers between levels are recorded using the fair value measurement as of the end of the quarterly period in which the event or change in circumstance giving rise to the transfer occurred.

Transfers into Level 3 other long-term investments of \$15.0 million represent the deconsolidation of White Mountains investment in Tuckerman Fund II due to the adoption of revisions to the guidance for variable interest entities under ASU 2009-17 (see **Note 1**). In addition, during the 2010, five securities which had been classified as Level 3 measurements in prior periods were recategorized as Level 2 measurements because quoted market prices for similar securities that were considered reliable and could be validated against an alternative source were available at December 31, 2010. These measurements comprise Transfers out of \$51.4 million in fixed maturities for the period ended December 31, 2010.

Table of Contents

A security that was classified as a Level 2 investment in prior periods was priced with unobservable inputs during the current period and represents the Transfers In of \$9.4 million in Level 3 investments. The fair value of this security was estimated using industry standard pricing models, in which management selected inputs using its best judgment. These inputs principally included benchmark yields, benchmark securities, reported trades, issuer spreads, bids, offers, credit ratings and prepayment speeds. The pricing models used by White Mountains use the same valuation methodology for all Level 3 measurements for fixed maturities. The security is considered to be Level 3 because the measurements are not directly observable. At December 31, 2010, the estimated fair value for this securities determined using the industry standard pricing models was \$1.2 million more than the estimated fair value based upon quoted prices provided by a third party. One security that was classified as a Level 2 investment in the prior periods due to restrictions on selling the security was transferred to a Level 1 investment when the restrictions lapsed during the year. This represents the Transfers In of \$5.6 million within Level 1 investments.

Securities Lending

During 2009, OneBeacon and White Mountains Re exited their securities lending programs. As of December 31, 2010, all loaned securities under the OneBeacon program had been returned except for two illiquid instruments for which OneBeacon holds \$1.7 million in collateral. As of December 31, 2009, all loaned securities under the White Mountains Re program had been returned and all collateral returned to borrowers.

White Mountains recorded \$14.8 million of net realized and unrealized investment losses during 2008 associated with its securities lending programs and \$8.0 million of net realized and unrealized investment gains during 2009 prior to exiting the programs.

NOTE 6. Debt

White Mountains debt outstanding as of December 31, 2010 and 2009 consisted of the following:

Table of Contents

OBH Senior Notes

In May 2003, OneBeacon U.S. Holdings, Inc. (OBH), formerly Fund American Companies, Inc., a wholly-owned subsidiary of OneBeacon Ltd., issued \$700.0 million face value of senior unsecured debt through a public offering, at an issue price of 99.7% (the OBH Senior Notes) and received \$693.4 million of proceeds, net of a \$4.5 million underwriting discount. The OBH Senior Notes bear an annual interest rate of 5.875%, payable semi-annually in arrears on May 15 and November 15, until maturity in May 2013. Taking into effect the amortization of the original issue discount and all underwriting and issuance expenses, the OBH Senior Notes have an effective yield of 6.0% per annum. Pursuant to the offering of the OBH Senior Notes, White Mountains fully and unconditionally guaranteed the payment of principal and interest on the OBH Senior Notes. Following the OneBeacon Offering, White Mountains continues to guarantee the payment of principal and interest on the OBH Senior Notes. OneBeacon Ltd. pays White Mountains a guarantee fee equal to 25 basis points per annum on the outstanding principal amount of the OBH Senior Notes. If White Mountains' voting interest in OneBeacon Ltd.'s common shares ceases to represent more than 50% of all their voting securities, OneBeacon Ltd. will seek to redeem, exchange or otherwise modify the senior notes in order to fully and permanently eliminate White Mountains' obligations under the guarantee. In the event that White Mountains' guarantee is not eliminated, the guarantee fee will increase over time up to a maximum guarantee fee of 425 basis points.

OBH incurred \$7.3 million in expenses related to the issuance of the OBH Senior Notes (including \$4.5 million in underwriting fees), which have been deferred and are being recognized into interest expense over the life of the OBH Senior Notes. Taking into effect the amortization of the original issue discount and all underwriting and issuance expenses, the OBH Senior Notes have an effective yield to maturity of approximately 6.0% per annum. OBH recorded \$29.5 million, \$38.1 million, and \$41.4 million in interest expense, inclusive of amortization of issuance costs, on the OBH Senior Notes for the years ended December 31, 2010, 2009, and 2008.

On June 1, 2010, through a tender offer, OBH repurchased and retired \$156.4 million aggregate principal amount of the OBH Senior Notes for an aggregate purchase price of \$165.4 million, which resulted in a \$9.6 million loss.

In addition to the cash tender offer, during 2010 OBH repurchased and retired \$29.7 million of outstanding OBH Senior Notes for \$30.8 million, which resulted in a \$1.2 million loss and OBIC purchased \$1.1 million of outstanding OBH Senior Notes for \$1.1 million.

During 2009, OBH repurchased and retired \$10.6 million of outstanding OBH Senior Notes for \$8.1 million, which resulted in a \$2.5 million gain. During 2009, OBIC purchased \$58.3 million of outstanding OBH Senior Notes for \$55.0 million, which resulted in a \$2.9 million gain. During 2008, OBH repurchased \$24.0 million of the outstanding OBH Senior Notes for \$22.3 million, which resulted in a \$1.6 million gain.

At December 31, 2010, White Mountains and OneBeacon were in compliance with all of the covenants under the OBH Senior Notes.

WMRe Senior Notes

In March 2007, WMRe Group issued \$400.0 million face value of senior unsecured notes at an issue price of 99.715% for net proceeds of \$392.0 million after taking into effect both deferrable and non-deferrable issuance costs, including the interest rate lock agreement described

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

below. The WMRe Senior Notes were issued in an offering that was exempt from the registration requirements of the Securities Act of 1933. The WMRe Senior Notes bear an annual interest rate of 6.375%, payable semi-annually in arrears on March 20 and September 20, until maturity in March 2017.

White Mountains Re incurred \$3.6 million in expenses related to the issuance of the WMRe Senior Notes (including \$2.6 million in underwriting fees), which have been deferred and are being recognized into interest expense over the life of the WMRe Senior Notes.

In anticipation of the issuance of the WMRe Senior Notes, White Mountains Re entered into an interest rate lock agreement to hedge its interest rate exposure from the date of the agreement until the pricing of the WMRe Senior Notes. The agreement was terminated on March 15, 2007 with a loss of \$2.4 million, which was recorded in other comprehensive income. The loss is being reclassified from accumulated other comprehensive income over the life of the WMRe Senior Notes using the interest method and is included in interest expense. At December 31, 2010, the unamortized balance of the loss remaining in accumulated other comprehensive income was \$1.7 million.

Taking into effect the amortization of the original issue discount and all underwriting and issuance expenses, including the interest rate lock agreement, the WMRe Senior Notes yield an effective rate of 6.49% per annum. White Mountains recorded \$26.1 million, \$26.1 million, and \$26.0 million of interest expense, inclusive of amortization of issuance costs and the interest rate lock agreement, on the WMRe Senior Notes for the years ended December 31, 2010, 2009, and 2008.

At December 31, 2010, White Mountains was in compliance with all of the covenants under the WMRe Senior Notes.

Table of Contents

Bank Facilities

At December 31, 2010, White Mountains has a revolving credit facility with a syndicate of lenders administered by Bank of America, N.A. with a total commitment of \$475.0 million (the WTM Bank Facility). In June 2010, Barclays, which had previously provided a \$33.3 million revolving credit facility to White Mountains (the WTM Barclays Facility), joined the syndicate of lenders to the WTM Bank Facility and increased its commitment from \$33.3 million to \$57.5 million, bringing the total commitment under the WTM Bank Facility from \$417.5 million to \$475.0 million. Barclays joined the WTM Bank Facility under the same terms and conditions as the other lenders. Simultaneously with the addition of Barclays to the WTM Bank Facility, White Mountains terminated the WTM Barclays Facility. At December 31, 2010, the WTM Bank Facility was undrawn.

The WTM Bank Facility contains various affirmative, negative and financial covenants which White Mountains considers to be customary for such borrowings, including certain minimum net worth and maximum debt to capitalization standards. Failure to meet one or more of these covenants could result in an event of default, which ultimately could eliminate availability under these facilities and result in acceleration of principal repayment on any amounts outstanding. At December 31, 2010, White Mountains was in compliance with all of the covenants under the WTM Bank Facility.

Mortgage Note

In December 2005, OneBeacon entered into a \$40.8 million, 18-year mortgage note, which has a variable interest rate based upon the lender's 30-day LIBOR rate, to purchase land and a building in Canton, Massachusetts. In 2009, OneBeacon repaid the entire outstanding principal balance on the Mortgage Note.

Concurrent with entering into the Mortgage Note, OneBeacon also entered into an interest rate swap to hedge its exposure to variability in the interest rate on the Mortgage Note. Interest paid or received on the swap was reported in interest expense. Changes in the fair value of the interest rate swap were reported as a component of other comprehensive income. At the time of repayment of the outstanding balance on the Mortgage Note, OneBeacon paid \$7.4 million to settle the related interest rate swap that had been used to fix the rate of interest on the Mortgage Note. The interest rate swap settlement was recorded as a reduction of other revenues on a pre-tax basis with a corresponding \$7.4 million increase in other comprehensive income on a pre-tax basis (\$4.8 million after-tax). The after-tax change in the fair value of the interest rate swap was a gain (loss) of \$2.0 million and \$(5.7) million for the years ended December 31, 2009 and 2008.

Sierra Note

In connection with its acquisition of the Sierra Insurance Group Companies (Sierra Group) on March 31, 2004, WMRe America entered into a \$62.0 million purchase note (the Sierra Note), \$58.0 million of which may be adjusted over its six-year term to reflect favorable or adverse loss reserve development on the acquired reserve portfolio and run-off of remaining policies in force (mainly workers compensation business), as well as certain other balance sheet protections. Since inception the principal of the Sierra Note had been reduced by \$29.0 million as a result of adverse development on the acquired reserves and run-off of unearned premium, which includes \$5.2 million and \$22.8 million of adverse development which occurred during 2008 and 2005 and \$1.9 million and \$9.1 million of favorable development in 2010 and 2007. Interest accrued on the unpaid balance of the Sierra Note at a rate of 4.0% per annum, compounded quarterly, and was payable at its maturity.

On October 31, 2008, White Mountains disposed of its remaining interest in the Sierra Group (CCIC) as part of the Berkshire Exchange transaction. White Mountains was still obligated to repay the Sierra Note, but Berkshire provided White Mountains an indemnity, whereby Berkshire reimbursed White Mountains all amounts due under the Sierra Note at its maturity, as adjusted for future reserve development, except for the portion of interest on the Sierra Note that accrued from its issue date through December 31, 2007, plus interest on this accrued amount

through the date of repayment.

The Sierra Note matured on March 31, 2010. The final amount due under the note is currently in dispute with respect to the amount of loss reserve development. On September 15, 2010, White Mountains paid Sierra the undisputed amounts owed of \$42.8 million on the Sierra Note which consisted of \$33.0 million for the principal repayment and \$9.8 million for accrued interest. Berkshire reimbursed White Mountains \$36.7 million, which was consisted of the \$33.0 million principal balance and \$3.7 million for accrued interest.

Atlantic Specialty Note

In connection with its acquisition of Atlantic Specialty Insurance Company on March 31, 2004, OneBeacon issued a \$20.0 million ten-year note to the seller (the Atlantic Specialty Note). The note accrued interest at a rate of 5.2%, except that the outstanding principal amount in excess of \$15.0 million accrued interest at a rate of 3.6%. During the three months ended March 31, 2010, OneBeacon repaid the remaining \$14.0 million outstanding principal on the note.

Interest

Total interest expense incurred by White Mountains for its indebtedness was \$57.3 million, \$70.8 million and \$82.1 million in 2010, 2009 and 2008. Total interest paid by White Mountains for its indebtedness was \$64.1 million, \$69.8 million and \$81.7 million in 2010, 2009 and 2008.

Table of Contents**NOTE 7. Income Taxes**

The Company and its Bermuda domiciled subsidiaries are not subject to Bermuda income tax under current Bermuda law. In the event there is a change in the current law such that taxes are imposed, the Company and its Bermuda domiciled subsidiaries would be exempt from such tax until March 28, 2016, pursuant to the Bermuda Exempted Undertakings Tax Protection Act of 1966. The Company has subsidiaries and branches that operate in various other jurisdictions around the world that are subject to tax in the jurisdictions in which they operate. The jurisdictions in which the Company's subsidiaries and branches are subject to tax are Australia, Belgium, Canada, Germany, Gibraltar, Luxembourg, the Netherlands, Singapore, Sweden, Switzerland, the United Kingdom and the United States.

The total income tax (expense) benefit for the years ended December 31, 2010, 2009 and 2008 consisted of the following:

Millions	Year Ended December 31,		
	2010	2009	2008
Current tax (expense) benefit:			
U.S. federal	\$ 48.5	\$ (24.2)	\$ 17.8
State	(2.4)	(1.7)	(2.7)
Non-U.S.	(10.5)	(10.6)	16.7
Total current tax (expense) benefit	35.6	(36.5)	31.8
Deferred tax (expense) benefit:			
U.S. federal	(58.9)	(140.3)	328.2
State			
Non-U.S.	2.4	(32.0)	138.7
Total deferred tax (expense) benefit	(56.5)	(172.3)	466.9
Total income tax (expense) benefit	\$ (20.9)	\$ (208.8)	\$ 498.7

Effective Rate Reconciliation

A reconciliation of taxes calculated using the 35% U.S. statutory rate (the tax rate at which the majority of White Mountains' worldwide operations are taxed) to the income tax (expense) benefit on pre-tax income follows:

Millions	Year Ended December 31,		
	2010	2009	2008
Tax (expense) benefit at the U.S. statutory rate	\$ (52.7)	\$ (267.4)	\$ 398.4
Differences in taxes resulting from:			
Non-U.S. earnings, net of foreign taxes	22.8	(1.2)	224.9
Purchase of subsidiaries	4.5		
Sale of subsidiaries	4.3		(8.3)
Change in valuation allowance	(3.8)	42.7	(108.1)
Tax reserve adjustments	(2.8)	8.7	(.9)
Tax rate change enacted in Luxembourg	2.8		(22.0)
Tax exempt interest and dividends	2.4	1.7	4.1
Withholding tax	(.2)	(.7)	(1.4)
Interest expense - dividends and accretion on preferred stock			(11.7)
Tax rate change enacted in Sweden			20.2
Other, net	1.8	7.4	3.5

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 10-K

Total income tax (expense) benefit on pre-tax income	\$	(20.9)	\$	(208.8)	\$	498.7
--	----	--------	----	---------	----	-------

The non-U.S. component of pre-tax income was \$82.1 million, \$246.3 million and \$(69.2) million for the years ended December 31, 2010, 2009 and 2008.

Tax Payments and Receipts

Net income tax payments to (receipts from) national governments (primarily the United States) totaled \$(52.0) million, \$(21.0) million and \$87.7 million for the years ended December 31, 2010, 2009 and 2008.

Deferred Tax Inventory

Deferred income taxes reflect the net tax effects of temporary differences between the carrying amounts of assets and liabilities for financial reporting purposes and the amounts for tax purposes. An outline of the significant components of White Mountains' deferred tax assets and liabilities follows:

December 31,
