Section 7 - Regulation FD

Item 7.01 - Regulation FD Disclosure

On May 14, 2012, we announced the publication of a scientific paper demonstrating the effectiveness of *HyStem*^{®-C} in the transplantation of heart muscle-derived cells in an animal model of heart disease. The paper, "Functional performance of human cardiosphere-derived cells delivered in an *in situ* polymerizable hyaluronan-gelatin hydrogel," is published online (ahead of print) in the peer-reviewed journal *Biomaterials*. The report demonstrates that the survival of human heart-derived cells is markedly improved when the cells are formulated in *HyStem*^{®-C}, a product being developed by us under the trade name *Renevia*[™] as a cell delivery device.

Additional information about the findings of the study reported in the paper can be found in the press release filed as Exhibit 99.1 and incorporated herein by reference.
