## **Item 1. Reports to Stockholders.**

Closed-end funds

Annual Report

Fort Dearborn Income Securities, Inc.

Annual Report

September 30, 2015

November 9, 2015

#### Dear shareholder,

We present you with the annual report for Fort Dearborn Income Securities, Inc. (the Fund ) for the 12 months ended September 30, 2015.

#### **Special Note**

On October 13, 2015, based on the recommendation of UBS Asset Management, the Fund s investment advisor, the Fund s Board of Directors announced its intention to pursue a conversion of the Fund from a closed-end fund to an open-end fund. It is anticipated that the Fund s conversion to an open-end fund will be accomplished through a tax-free reorganization of the Fund into an open-end fund created for the purpose of the conversion (Fund Reorganization). A Fund Reorganization requires the approval of shareholders, and it is expected that a Fund Reorganization proposal will be submitted to shareholders for approval at a special shareholder meeting of the Fund to be called in the first half of 2016. If the Fund Reorganization is approved, shareholders of the Fund will become shareholders of a new open-end fund.

#### **Performance**

For the 12 months ended September 30, 2015, the Fund posted a total return on a net asset value (NAV) basis of -2.05%, and 2.33% on a market price basis. Over the same period, the Fund's benchmark, the Barclays US Aggregate Index (the Index) gained 2.94%. The Fund's peer group, as measured by the Lipper Corporate Debt Funds BBB-Rated classification, posted a median total return of -0.80% on a NAV basis, and 2.94% on a market price basis. (For more performance information, please refer to Performance at a glance on page 5.) During the reporting period, neither the Fund nor the Index used structural leverage (That is the Fund did not have preferred stock outstanding or borrow from banks for investment purposes. Leverage magnifies returns both on the upside and on the downside, creating a wider range of returns.)

The Fund traded at a discount to its NAV during the 12 month reporting period. On the last trading day of the preceding reporting period, September 30, 2014, the Fund traded at a discount of 9.5%, versus the 9.0% median discount of the Fund s Lipper peer group. As of September 30, 2015, the Fund traded at a discount of 5.9%, versus the 6.1% median discount of the Fund s Lipper peer group. A fund trades at a discount when the market price at which its shares trade is less than its NAV. Alternately, a fund trades at a premium when the market price at which its shares trade is more than its NAV per share. The market price is the price the market is willing to pay for shares of a fund at a given time and may be influenced by a range of factors, such as supply and demand and market conditions. NAV per share is determined by dividing the value of the Fund s securities, cash and other assets, less all liabilities, by the total number of common shares outstanding.

#### **Market commentary**

Growth in the US fluctuated during the reporting period. The US Commerce Department reported that gross domestic product (GDP) expanded at a 2.1% seasonally adjusted annualized rate during the fourth quarter of

<sup>1</sup> The Barclays US Aggregate Index is an unmanaged broad based index designed to measure the US-dollar-denominated, investment-grade, taxable bond market. The index includes bonds from the Treasury, government-related, corporate, mortgage-backed, asset-backed and commercial mortgage-backed sectors. Investors should note that indices do not reflect the deduction of fees and expenses.

2014. GDP growth then moderated to a 0.6% rate for the first quarter of 2015. However, the US economy then improved, and second quarter GDP growth rose to a 3.9% rate. Third quarter 2015 GDP grew at a 1.5% rate based on the Commerce Department s initial estimate on October 29, 2015, after the reporting period had ended.

The US Federal Reserve Board maintained its accommodative monetary policy during the reporting period. The central bank continued to hold the fed funds rate at a historically low range between 0% and 0.25%. (The federal funds rate, or the fed funds rate, is the rate banks charge one another for funds they borrow on an overnight basis.) However, at its March 2015 meeting, the Fed said that it anticipates that it will be appropriate to raise the target range for the federal funds rate when it has seen further improvement in the labor market and is reasonably confident that inflation will move back to its 2% objective over the medium term. Finally, at the central bank s meeting that concluded on September 17, 2015, the Fed continued to keep rates between 0% and 0.25%.

Turning to the fixed income market, concerns about global growth, lower oil prices and geopolitical events triggered several flights to quality. Against this backdrop, the yield on the 10-year Treasury fell from 2.52% to 2.06% during the 12 months ended September 30, 2015. Most US spread sectors posted positive total returns during the reporting period, as they were supported by declining long-term Treasury yields, even as credit spreads generally widened.<sup>3</sup> Over the 12 month period ended September 30, 2015, the Fund underperformed the Index on a net asset total return basis. The commentary below describes factors that impacted the Fund s performance relative to the Index.

#### Portfolio commentary

#### What worked

#### The Fund s yield curve positioning contributed to results.

Our yield curve flattening bias was beneficial, as we had overweights to the intermediate and long portions of the curve and an underweight to the short end of the curve.

Allocations to collateralized loan obligations ( CLOs ), commercial mortgage-backed securities ( CMBS ) and Treasury Inflation-Protected Securities ( TIPS ) were additive for performance.

#### What didn t work

#### The Fund s credit exposure was the largest detractor from results.

Overweight allocations to investment grade and high yield corporate bonds were negative for performance, as their spreads widened and they lagged the Index.

Security selection of investment grade and high yield corporate bonds detracted from results. In particular, the Fund s higher beta credits hurt its performance.

## The Fund s allocations to certain spread sectors were headwinds for performance during the reporting period.

An overweight to collateralized mortgage obligations ( CMOs ) was negative for results.

Our non-corporate credit exposure, including foreign agencies, supranational entities and sovereign local authorities, detracted from performance.

- <sup>2</sup> Based on the Commerce Department s initial estimate announced on October 29, 2015, after the reporting period had ended.
- <sup>3</sup> A spread sector refers to non-government fixed income sectors, such as investment grade or high yield bonds, commercial mortgage-backed securities (CMBS), etc.

2

#### The Fund s duration positioning detracted from results during the reporting period.

We tactically adjusted the Fund s duration during the reporting period, but it was largely shorter than that of the Index. This was not rewarded given generally declining rates.

#### Portfolio adjustments

#### There were several adjustments made to the portfolio s sector positioning during the reporting period.

We continued to employ certain derivatives.

The Fund utilized US Treasury and Eurodollar futures and options to more effectively manage the Fund s duration and yield curve positioning. Overall, duration and yield curve management strategies generated mixed results during the reporting period.

The Fund utilized credit derivatives, such as credit default swaps, to manage exposure across different fixed income sectors. These instruments were used to help reduce risk in the portfolio, but also to add exposure to areas we found attractive, and offered an opportunity to boost the Fund s net investment income. As noted earlier, however, overall credit strategies including the bond securities held by the Fund were negative contributors to results over the reporting period.

The use of currency instruments, such as foreign exchange forward positions, was quite limited during the period. Given that the Fund does not currently seek active currency risk, these instruments were effectively used to hedge the Fund s foreign currency-denominated bond positions back to US dollars.

We increased our allocations to CLOs and TIPS during the reporting period.

We tactically adjusted our corporate bond exposures over the fiscal year.

#### Outlook

We maintain our view that the US economy will continue to expand, albeit at a fairly modest pace. We also expect inflation to remain relatively muted. In terms of the Fed interest rate liftoff, it appears that it will commence late in 2015, or perhaps in early 2016. Turning our attention overseas, growth is slowly improving in Europe. However, with minimal inflation pressure we believe the European Central Bank will maintain its accommodative monetary policy. We are cautious regarding growth in Asia. In particular, we are concerned about moderating growth in China and the potential spill over to other emerging markets countries, especially those with commodity-driven economies.

Turning to the fixed income market, credit spreads have widened, partially driven by a challenging supply/demand technical environment. In addition, earnings growth has slowed, and we may be getting closer to the end of the credit cycle. That said, valuations are attractive given current spreads and may lead to compelling entry points for certain securities.

We thank you for your continued support and welcome any comments or questions you may have. For additional information regarding the Fund, please contact your Financial Advisor, or visit us at www.ubs.com/am-us.

Sincerely,

Mark E. Carver Scott Dolan

Barclays US Aggregate Index <sup>2</sup>	2.94%	3.10%	4.64%

Past performance does not predict future performance. The return and value of an investment will fluctuate so that an investor s shares, when sold, may be worth more or less than their original cost. The Fund s net asset value (NAV) returns assume, for illustration only, that dividends and other distributions, if any, were reinvested at the NAV on the payable dates. The Fund s market price returns assume that all dividends and other distributions, if any, were reinvested at prices obtained under the Fund s Dividend Reinvestment Plan. Returns do not reflect the deduction of taxes that a shareholder would pay on Fund dividends and other distributions, if any, or the sale of Fund shares.

Lipper peer group data calculated by Lipper Inc.; used with permission. The Lipper median is the return of the fund that places in the middle of the peer group. Lipper classifies the Fund in its Corporate Debt Funds BBB-Rated category, which includes non-leveraged closed-end funds that invest primarily in corporate and government debt issues rated in the top four grades.

Performance information reflects the deduction of the Fund s fees and expenses, as indicated in the Statement of operations included in its shareholder reports, such as investment advisory and administration fees, custody fees, exchange listing fees, etc. It does not reflect any transaction charges that a shareholder may incur when (s)he buys or sells shares (e.g., a shareholder s brokerage commissions).

The FDI Fund Index is an unmanaged index compiled by the Advisor, constructed as follows: From 12/31/81 to 5/31/2013 5% Barclays US Agency Index (7+ years), 75% Barclays US Credit Index (7+ years), 10% Barclays US Mortgage-Backed Securities Index (all maturities) and 10% Barclays US Treasury Index (7+ years). From 6/1/2013 to present 100% Barclays US Aggregate Index. Investors should note that indices do not reflect the deduction of fees and expenses.

<sup>&</sup>lt;sup>2</sup> The Barclays US Aggregate Index is an unmanaged broad based index designed to measure the US-dollar-denominated, investment-grade, taxable bond market. The index includes bonds from the Treasury, government-related, corporate, mortgage backed, asset-backed and commercial mortgage-backed sectors. Investors should note that indices do not reflect the deduction of fees and expenses.

Total	100.0%	100.0%	100.0%

<sup>&</sup>lt;sup>1</sup> Prices and other characteristics will vary over time.

<sup>&</sup>lt;sup>2</sup> Duration is a measure of price sensitivity of a fixed income investment or portfolio (expressed as % change in price) to a 1 percentage point (i.e., 100 basis points) change in interest rates, accounting for optionality in bonds such as prepayment risk and call/put features.

Weightings represent percentages of net assets as of the dates indicated. The Funds portfolio is actively managed and its composition will vary over time. Credit quality ratings shown are based on those assigned by Standard & Poors Financial Services LLC, a part of McGraw-Hill Financial (S&P), to individual portfolio holdings. S&P is an independent ratings agency. Rating reflected represents S&P individual debt issue credit rating. While S&P may provide a credit rating for a bond issuer (e.g., a specific company or country); certain issues, such as some sovereign debt, may not be covered or rated and therefore are reflected as non-rated for the purposes of this table. Credit ratings range from AAA, being the highest, to D, being the lowest, based on S&Ps measures; ratings of BBB or higher are considered investment grade quality. Unrated securities do not necessarily indicate low quality. Further information regarding S&Ps rating methodology may be found on its website www.standardandpoors.com. Please note that references to credit quality made in the commentary section above reflect ratings based on multiple providers (not just S&P) and thus may not align with the data represented in this table.

<sup>&</sup>lt;sup>4</sup> S&P downgraded long-term US government debt on August 5, 2011 to AA+. Other rating agencies continue to rate long-term US government debt in their highest ratings categories. The Fund s aggregate exposure to AA rated debt would include the percentages indicated above for AA, US Treasury and US Agency debt but has been broken out

- into three separate categories to facilitate understanding.

  <sup>5</sup> Includes agency debentures and agency mortgage-backed securities.

  <sup>6</sup> Amount represents less than 0.05% of net assets.
