Notes to Unaudited Interim Consolidated Financial Statements

Note 1 - Significant Accounting Policies

**Business Operations** 

The accompanying unaudited interim consolidated financial statements of Synovus include the accounts of the Parent Company and its consolidated subsidiaries. Synovus provides integrated financial services, including commercial and retail banking, financial management, insurance, and mortgage services to its customers through locally-branded divisions of its wholly-owned subsidiary bank, Synovus Bank, in offices located throughout Georgia, Alabama, South Carolina, Florida, and Tennessee.

In addition to our banking operations, we also provide various other financial services to our customers through direct and indirect wholly-owned non-bank subsidiaries, including: Synovus Securities, Inc., headquartered in Columbus, Georgia, which specializes in professional portfolio management for fixed-income securities, investment banking, the execution of securities transactions as a broker/dealer and the provision of individual investment advice on equity and other securities; Synovus Trust Company, N.A., headquartered in Columbus, Georgia, which provides trust, asset management and financial planning services; and Synovus Mortgage Corp., headquartered in Birmingham, Alabama, which offers mortgage services.

**Basis of Presentation** 

The accompanying unaudited interim consolidated financial statements have been prepared in accordance with the instructions to the SEC Form 10-Q and Article 10 of Regulation S-X; therefore, they do not include all information and footnotes necessary for a fair presentation of financial position, results of operations, comprehensive income, and cash flows in conformity with GAAP. All adjustments consisting of normally recurring accruals that, in the opinion of management, are necessary for a fair presentation of the consolidated financial position and results of operations for the periods covered by this Report have been included. The accompanying unaudited interim consolidated financial statements should be read in conjunction with the consolidated financial statements and related notes appearing in Synovus' 2013 Form 10-K. There have been no significant changes to the accounting policies as disclosed in Synovus' 2013 Form 10-K.

In preparing the unaudited interim consolidated financial statements in accordance with GAAP, management is required to make estimates and assumptions that affect the reported amounts of assets and liabilities and the disclosure of contingent assets and liabilities as of the date of the respective consolidated balance sheets and the reported amounts of revenues and expenses for the periods presented. Actual results could differ significantly from those estimates.

Material estimates that are particularly susceptible to significant change relate to the determination of the allowance for loan losses; the valuation of other real estate; the fair value of investment securities; the fair value of private equity investments; the valuation of deferred tax assets; and contingent liabilities related to legal matters. Cash and Cash Equivalents

Cash and cash equivalents consist of cash and due from banks. At March 31, 2014 and December 31, 2013, cash and cash equivalents included \$79.4 million and \$104.9 million, respectively, on deposit to meet Federal Reserve Bank requirements. At both March 31, 2014 and December 31, 2013, \$375 thousand of the due from banks balance was restricted as to withdrawal.

Short-term Investments

Short-term investments consist of interest bearing funds with the Federal Reserve Bank, interest earning deposits with banks, and Federal funds sold and securities purchased under resale agreements. Interest earning deposits with banks include \$9.6 million and \$11.1 million at March 31, 2014 and December 31, 2013, respectively, which is pledged as collateral in connection with certain letters of credit. Federal funds sold include \$72.4 million at March 31, 2014 and \$72.2 million at December 31, 2013, which are pledged to collateralize certain derivative instruments. Federal funds sold and securities purchased under resale agreements, and Federal funds purchased and securities sold under repurchase agreements, generally mature in one day.

#### Recently Adopted Accounting Standards Updates

Effective January 1, 2014, Synovus adopted the provisions of ASU 2013-11, Income Taxes (Topic 740): Presentation of an Unrecognized Tax Benefit When a Net Operating Loss Carryforward, a Similar Tax Loss, or a Tax Credit Carryforward Exists. This ASU provides guidance on financial statement presentation of an unrecognized tax benefit when a net operating loss carryforward, a similar tax loss, or a tax credit carryforward exists. Income tax accounting guidance did not explicitly address how to present unrecognized tax benefits when a company also has net operating losses or tax credit carryforwards. Previously, most companies presented these unrecognized benefits as a liability (i.e., gross presentation), but some presented the liability as a reduction of their net operating losses or tax credit carryforwards (i.e., net presentation). To address this diversity in practice, the FASB issued ASU 2013-11, requiring unrecognized tax benefits to be offset against a deferred tax asset for a net operating loss carryforward, similar tax loss, or tax credit carryforward except when either (1) a net operating loss carryforward, a similar tax loss, or a tax credit carryforward is not available as of the reporting date under the governing tax law to settle taxes that would result from the disallowance of the tax position, or (2) the entity does not intend to use the deferred tax asset for this purpose (provided that the tax law permits a choice). If either of these conditions exists, an entity should present an unrecognized tax benefit in the financial statements as a liability and should not net the unrecognized tax benefit with a deferred tax asset. Synovus adopted the provisions of ASU 2013-11 effective January 1, 2014. However, because prior to adoption Synovus already presented its unrecognized tax benefits as a reduction of its net operating losses, adoption of ASU 2013-11 did not have a significant impact on its consolidated balance sheet. Reclassifications

Prior periods' consolidated financial statements are reclassified whenever necessary to conform to the current period's presentation.

#### Subsequent Events

Synovus has evaluated for consideration, or disclosure, all transactions, events, and circumstances, subsequent to the date of the consolidated balance sheet and through the date the accompanying unaudited interim consolidated financial statements were issued, and has reflected, or disclosed, those items deemed appropriate within the unaudited interim consolidated financial statements.

Note 2 - Subsequent Event - Reverse Stock Split and Increase in Number of Authorized Common Shares

On April 24, 2014, at Synovus' 2014 Annual Shareholders' Meeting ("Annual Meeting"), Synovus' shareholders approved a proposal authorizing Synovus' Board of Directors to effect a one-for-seven reverse stock split of Synovus' common stock. Following the Annual Meeting, Synovus' Board of Directors authorized the one-for-seven reverse stock split. The reverse stock split will become effective on May 16, 2014, and Synovus' shares of common stock will begin trading on a post-split basis on the New York Stock Exchange (NYSE) at the opening of trading on May 19, 2014. Share and per share amounts included in this Report have not been restated to reflect the approval of the one-for-seven reverse stock split because the split will not be effective until after the filing of this Report. Pro forma share and per share information as of and for the three months ended March 31, 2014, giving effect to the one-for-seven reverse stock split is presented below:

	As of and for the	three months ended March
	31, 2014	
	As Reported	Pro Forma
Common stock - \$1.00 par value. Outstanding shares	972,806,269	138,972,324
Net income per common share, diluted	\$0.05	\$0.33

Additionally, on April 24, 2014, Synovus' shareholders also approved an amendment to Synovus' articles of incorporation to increase the number of authorized shares of Synovus' common stock from 1.2 billion shares to 2.4 billion shares. Synovus effected the increase in the number of authorized shares on April 24, 2014. Upon the effective date of the reverse stock split, the number of Synovus' authorized shares of common stock will be proportionately reduced from 2.4 billion shares to 342.9 million shares. Note 3 - Sale of Branches

On January 17, 2014, Synovus completed the sale of certain loans, premises, deposits, and other assets and liabilities of the Memphis, Tennessee operations of Trust One Bank, a division of Synovus Bank. The sale included \$89.6 million in total

loans and \$191.3 million in total deposits. Results for the three months ended March 31, 2014 reflect a pre-tax gain, net of associated costs, of \$5.8 million relating to this transaction.

Note 4 - Investment Securities

The amortized cost, gross unrealized gains and losses, and estimated fair values of investment securities available for sale at March 31, 2014 and December 31, 2013 are summarized below.

(1) Amortized cost is adjusted for other-than-temporary impairment charges in 2014 and 2013, which have been recognized in the consolidated statements of income in the applicable year, and were considered inconsequential. At March 31, 2014 and December 31, 2013, investment securities with a carrying value of \$2.14 billion and \$2.33 billion respectively, were pledged to secure certain deposits and securities sold under repurchase agreements as

required by law and contractual agreements.

Synovus has reviewed investment securities that are in an unrealized loss position as of March 31, 2014 and December 31, 2013 for OTTI and does not consider any securities in an unrealized loss position to be

other-than-temporarily impaired. If Synovus intended to sell a security in an unrealized loss position, the entire unrealized loss would be reflected in income. Synovus does not intend to sell investment securities in an unrealized loss position prior to the recovery of the unrealized loss, which may be until maturity, and has the ability and intent to hold those securities for that period of time. Additionally, Synovus is not currently aware of any circumstances which will require it to sell any of the securities that are in an unrealized loss position.

Declines in the fair value of available for sale securities below their cost that are deemed to have OTTI are reflected in earnings as realized losses to the extent the impairment is related to credit losses. The amount of the impairment related to other factors is recognized in other comprehensive income. Currently, unrealized losses on debt securities are attributable to increases in interest rates on comparable securities from the date of purchase. Synovus regularly evaluates its investment securities portfolio to ensure

that there are no conditions that would indicate that unrealized losses represent OTTI. These factors include the length of time the security has been in a loss position, the extent that the fair value is below amortized cost, and the credit standing of the issuer. As of March 31, 2014 there were 71 securities in a loss position for less than twelve months and 5 securities in a loss position for more than 12 months.

Gross unrealized losses on investment securities and the fair value of the related securities, aggregated by investment category and length of time that individual securities have been in a continuous unrealized loss position, at March 31, 2014 and December 31, 2013, are presented below.

The amortized cost and fair value by contractual maturity of investment securities available for sale at March 31, 2014 are shown below. The expected life of mortgage-backed securities or CMOs may differ from contractual maturities because issuers may have the right to call or prepay obligations with or without call or prepayment penalties. For purposes of the maturity table, mortgage-backed securities and CMOs, which are not due at a single maturity date, have been classified based on the final contractual maturity date.

Investment securities gains, net	\$1,331	45	

#### Note 5 - Restructuring Charges

For the three months ended March 31, 2014 and 2013 total restructuring charges are as follows:

	Three Months	Ended March 31,
(in thousands)	2014	2013
Severance charges	\$8,047	4,877
Professional fees and other charges	530	(27
Total restructuring charges	\$8,577	4,850

In January 2014, Synovus announced the planned implementation during 2014 of new expense savings initiatives which are expected to result in annualized cost savings of \$30 million. The initiatives include planned workforce reductions as well as planned reductions in occupancy expenses. Synovus began to implement these initiatives during the first quarter of 2014, undertaking the first targeted staff reductions. As a result of these actions, Synovus recorded aggregate restructuring charges of \$8.6 million during the three months ended March 31, 2014, consisting primarily of \$8.0 million in severance charges related to employees identified for involuntary termination. These termination benefits are provided under an ongoing benefit arrangement as defined in ASC 712,

Compensation-Nonretirement Postemployment Benefits; accordingly, the charges were recorded pursuant to the liability recognition criteria of ASC 712.

Severance charges recorded during the three months ended March 31, 2013 relate to involuntary terminations in connection with previously announced efficiency initiatives. These termination benefits were provided under a one-time benefit arrangement as defined in ASC 420, Exit or Disposal Costs or Obligations; accordingly, the charges were recorded pursuant to the liability recognition criteria of ASC 420.

At March 31, 2014, the liability for restructuring activities was \$7.8 million, and consisted primarily of involuntary termination benefits (accounted for in accordance with ASC 712) which are expected to be paid in lump sums during the remainder of 2014.

#### Table of Contents

The credit quality of the loan portfolio is summarized no less frequently than quarterly using the standard asset classification system utilized by the federal banking agencies. These classifications are divided into three groups – Not Criticized (Pass), Special Mention, and Classified or Adverse rating (Substandard, Doubtful, and Loss) and are defined as follows:

Pass - loans which are well protected by the current net worth and paying capacity of the obligor (or guarantors, if any) or by the fair value, less cost to acquire and sell in a timely manner, of any underlying collateral.

Special Mention - loans which have potential weaknesses that deserve management's close attention. These loans are not adversely classified and do not expose an institution to sufficient risk to warrant an adverse classification. Substandard - loans which are inadequately protected by the current net worth and paying capacity of the obligor or by the collateral pledged, if any. Loans with this classification are characterized by the distinct possibility that the institution will sustain some loss if the deficiencies are not corrected.

Doubtful - loans which have all the weaknesses inherent in loans classified as Substandard with the added characteristic that the weaknesses make collection or liquidation in full highly questionable and improbable on the basis of currently known facts, conditions, and values.

Loss - loans which are considered by management to be uncollectible and of such little value that their continuance on the institution's books as an asset, without establishment of a specific valuation allowance or charge-off is not warranted.

In the following tables, retail loans and small business loans are generally assigned a risk grade similar to the classifications described above; however, upon reaching 90 days and 120 days past due, they are generally downgraded to Substandard and Loss, respectively, in accordance with the FFIEC Uniform Retail Credit Classification and Account Management Policy. Additionally, in accordance with the Interagency Supervisory Guidance on Allowance for Loan and Lease Losses Estimation Practices for Loans and Lines of Credit Secured by Junior Liens on 1-4 Family Residential Properties, the risk grade classifications of retail loans (home equity lines and consumer mortgages) secured by junior liens on 1-4 family residential properties also consider available information on the payment status of the associated senior lien with other financial institutions.

<sup>(1)</sup> Includes \$351.9 million and \$384.0 million of non-accrual Substandard loans at March 31, 2014 and December 31, 2013, respectively.

<sup>(2)</sup> The loans within this risk grade are on non-accrual status and have an allowance for loan losses equal to 50% of the loan amount.

<sup>(3)</sup> The loans within this risk grade are on non-accrual status and have an allowance for loan losses equal to the full loan amount.

<sup>(4)</sup> Represent amounts that were 120 days past due. These credits are downgraded to the Loss category with an allowance for loan losses equal to the full loan amount and are generally charged off upon reaching 181 days past due in accordance with the FFIEC Uniform Retail Credit Classification and Account Management Policy.
 <sup>(5)</sup>Total before net deferred fees and costs of \$28.4 million.
 <sup>(6)</sup>Total before net deferred fees and costs of \$28.9 million.

The following table details the changes in the allowance for loan losses by loan segment for the three months ended March 31, 2014 and 2013.

Allowance for Loan Losses and Recorded Investment in Loans

<sup>(1)</sup>Total before net deferred fees and costs of \$28.4 million. <sup>(2)</sup>Total before net deferred fees and costs of \$21.6 million.

impairment

During the first quarter of 2014, Synovus designated \$23.0 million of allowance for loan losses that was included in the unallocated component of the allowance for loan losses at December 31, 2013 to the allowance for loan losses allocated to the respective loan segments. The allocation of the allowance for loan losses to the loan segments related to the qualitative factors evaluated at December 31, 2013 on a total loan portfolio basis and included in the unallocated component of the allowance for loan losses at December 31, 2013. These qualitative factors consider the inherent risk of loss relating to the following:

Experience, ability, and depth of lending management, loan review personnel, and other relevant staff
National and local economic trends and conditions
Underlying value of collateral dependent loans, which impacts trends in charge-offs and recoveries that are not included in the expected loss factors
Trends in volume and terms of loans
Effects of changes in credit concentrations
Model uncertainty

Management determined that prospectively the assessment of these qualitative factors for each loan segment would improve the overall level of precision of the allowance for loan loss estimation process. The designation of this component of the unallocated allowance to the allocated allowance did not result in a change to the total allowance for loan losses or

provision expense during the first quarter of 2014. The allowance for loan losses continues to consist of an allocated component (which includes the qualitative factors noted above as well as the qualitative factors disclosed in the 2013 Form 10-K) and an unallocated component. Effective March 31, 2014, the unallocated component relates to risk elements, if any, which are not already included in the allocated allowance.

The average recorded investment in impaired loans was \$984.5 million for the three months ended March 31, 2013. Excluding accruing TDRs, there was no interest income recognized for the investment in impaired loans for the three months ended March 31, 2013. Interest income recognized for accruing TDRs was \$5.5 million for the three months ended March 31, 2013. At March 31,

20

2014, and 2013, all impaired loans other than \$495.4 million and \$623.9 million, respectively, of accruing TDRs, were on non-accrual status.

Concessions provided in a TDR are primarily in the form of providing a below market interest rate given the borrower's credit risk, a period of time generally less than one year with a reduction of required principal and/or interest payments (e.g., interest only for a period of time), or extension of the maturity of the loan generally for less than one year. Insignificant periods of reduction of principal and/or interest payments, or one time deferrals of 3 months or less, are generally not considered to be financial concessions.

The following tables represent, by concession type, the post-modification balance for loans modified or renewed during the three months ended March 31, 2014 and 2013, respectively, that were reported as accruing or non-accruing TDRs.

Troubled Debt Restructurings Entered Into That Subsequently Defaulted<sup>(1)</sup> During

<sup>(1)</sup> Default is defined as the earlier of the troubled debt restructuring being placed on non-accrual status or reaching 90 days past due with respect to principal and/or interest payments.

(2) Amounts related to loans modified or renewed into TDRs within 12 months of the default date that subsequently defaulted during the three months ended March 31, 2013 were previously disclosed as 29 contracts with a recorded investment totaling \$19.4 million. These amounts were revised in the table above due to a re-evaluation of the defaulted status of certain loans during this period.

If, at the time a loan was designated as a TDR, the loan was not already impaired, the measurement of impairment that resulted from the TDR designation changes from a general pool-level reserve to a specific loan measurement of impairment in accordance with ASC 310-10-35. Generally, the change in the allowance for loan losses resulting from such TDR designation is not significant. At March 31, 2014, the allowance for loan losses allocated to accruing TDRs totaling \$495.4 million was \$24.9 million compared to accruing TDRs of \$623.9 million with an allocated allowance for loan losses of \$38.9 million at March 31, 2013. Non-accrual, non-homogeneous loans (commercial-type impaired loans greater than \$1 million) that are designated as TDRs, are individually measured for the amount of impairment, if any, both before and after the TDR designation.

### Note 7 - Other Real Estate

ORE consists of properties obtained through a foreclosure proceeding or through an in-substance foreclosure in satisfaction of loans. In accordance with provisions of ASC 310-10-35 regarding subsequent measurement of loans for impairment and ASC 310-40-15 regarding accounting for troubled debt restructurings by a creditor, a loan is classified as an in-substance foreclosure when Synovus has taken possession of the collateral regardless of whether formal foreclosure proceedings have taken place.

At foreclosure, ORE is recorded at the lower of cost or fair value less the estimated cost to sell, which establishes a new cost basis. Subsequent to foreclosure, ORE is evaluated quarterly and reported at fair value less estimated costs to sell, not to exceed the new cost basis, determined on the basis of current appraisals, comparable sales, and other estimates of fair value obtained principally from independent sources, adjusted for estimated selling costs. Management also considers other factors or recent developments such as changes in absorption rates or market conditions from the time of valuation and anticipated sales values considering management's plans for disposition,

which could result in an adjustment to lower the collateral value estimates indicated in the appraisals. At the time of foreclosure or initial possession of collateral, any excess of the loan balance over the fair value of the real estate held as collateral, less costs to sell, is recorded as a charge against the allowance for loan losses. Revenue and expenses from ORE operations as well as gains or losses on sales are recorded as foreclosed real estate expense, net, a component of non-interest expense on the consolidated statements of income. Subsequent declines in fair value are recorded on a property-by-property basis through use of a valuation allowance within other real estate on the consolidated balances sheets and valuation adjustment account in foreclosed real estate expense, net, a component of non-interest expense on the consolidated statements of income.

The carrying value of ORE was \$110.8 million and \$112.6 million at March 31, 2014 and December 31, 2013, respectively. During the three months ended March 31, 2014 and 2013, \$12.9 million and \$31.2 million, respectively, of loans and other loans held for sale were foreclosed and transferred to other real estate at fair value. During the three months ended March 31, 2014 and

2013, Synovus recognized foreclosed real estate expense, net, of \$5.7 million and \$10.9 million, respectively. These expenses included write-downs for declines in fair value of ORE subsequent to the date of foreclosure and net realized losses resulting from sales transactions totaling \$4.8 million and \$8.8 million for the three months ended March 31, 2014 and 2013, respectively.

Note 8 - Other Comprehensive Income (Loss)

The following table illustrates activity within the balances in accumulated other comprehensive income (loss) by component, and is shown for the three months ended March 31, 2014 and 2013.

Changes in Accumulated Other Comprehensive Income (Loss) by Component (Net of Income Taxes)

(in thousands)	Net unrealized gains (losses) on cash flow hedges	7	Net unrealized gain (losses) on investment securitie available for sale		Post-retirement unfunded health benefit		Total	
Balance as of December 31, 2013	\$(13,099)	)	(28,936	)	777		(41,258	)

Balance as of March 31, 2014	\$(13,030)	)	(18,166	)	733		(30,463	)

Changes in Accumulated Other Comprehensive Income (Loss) by Component (Net of Income Taxes)

(in thousands)	Net unrealized gains (losses) on cash flow hedges	Net unrealized gains (losses) on investment securities available for sale	Post-retirement	Total	
Balance as of December 31, 2012	\$(13,373)	17,111	363	4,101	
Other comprehensive income (loss) before reclassifications	—	(1,331)	·	(1,331	)
Amounts reclassified from accumulated other comprehensive income (loss)	69	(29 )	(23	) 17	
Net current period other comprehensive income (loss) Balance as of March 31, 2013	69 \$(13,304 )	(1,360 ) 15,751	(23 340	) (1,314 2,787	)

In accordance with ASC 740-20-45-11(b), a deferred tax asset valuation allowance associated with unrealized gains and losses not recognized in income is charged directly to other comprehensive income (loss). Thus, during the years 2010 and 2011, Synovus recorded a deferred tax asset valuation allowance associated with unrealized gains and losses not recognized in income directly to other comprehensive income (loss) by applying the portfolio approach for allocation of the valuation allowance. Synovus has consistently applied the portfolio approach which treats derivative financial instruments, equity securities, and debt securities as a single portfolio. As of March 31, 2014, the ending balance in net unrealized gains (losses) on cash flow hedges and net unrealized gains (losses) on investment securities available for sale includes unrealized losses of \$12.1 million and \$13.3 million, respectively, related to the residual tax effects remaining in OCI due to the previously established deferred tax asset valuation allowance. Under the portfolio approach, these unrealized losses are realized at the time the entire portfolio is sold or disposed.

#### Table of Contents

The following table illustrates activity within the reclassifications out of accumulated other comprehensive income (loss), for the three months ended March 31, 2014 and 2013. Reclassifications out of Accumulated Other Comprehensive Income (Loss) For the Three Months Ended March 31, 2014

#### Note 9 - Fair Value Accounting

Synovus carries various assets and liabilities at fair value based on the fair value accounting guidance under ASC 820 and ASC 825. Fair value is defined as the exchange price that would be received for an asset or paid to transfer a liability (an "exit price") in the principal or most advantageous market for the asset or liability in an orderly transaction between market participants on the measurement date.

Synovus has implemented controls and processes for the determination of the fair value of financial instruments. The ultimate responsibility for the determination of fair value rests with Synovus. Synovus has established a process that has been designed to ensure there is an independent review and validation of fair values by a function independent of those entering into the transaction. This includes specific controls to ensure consistent pricing policies and procedures that incorporate verification for both market and derivative transactions. For all financial instruments where fair values are determined by reference to externally quoted prices or observable pricing inputs to models, independent price determination or validation is utilized. Where the market

24

for a financial instrument is not active, fair value is determined using a valuation technique or pricing model. These valuation techniques and models involve a degree of estimation, the extent of which depends on each instrument's complexity and the availability of market-based data.

The most frequently applied pricing model and valuation technique utilized by Synovus is the discounted cash flow model. Discounted cash flows determine the value by estimating the expected future cash flows from assets or liabilities discounted to their present value. Synovus may also use a relative value model to determine the fair value of a financial instrument based on the market prices of similar assets or liabilities or an option pricing model such as binomial pricing that includes probability-based techniques. Assumptions and inputs used in valuation techniques and models include benchmark interest rates, credit spreads and other inputs used in estimating discount rates, bond and equity prices, price volatilities and correlations, prepayment rates, probability of default, and loss severity upon default.

Synovus refines and modifies its valuation techniques as markets develop and as pricing for individual financial instruments become more or less readily available. While Synovus believes its valuation techniques are appropriate and consistent with other market participants, the use of different methodologies or assumptions could result in different estimates of fair value at the balance sheet date. In order to determine the fair value, where appropriate, management applies valuation adjustments to the pricing information. These adjustments reflect management's assessment of factors that market participants would consider in setting a price, to the extent that these factors have not already been included in the pricing information. Furthermore, on an ongoing basis, management assesses the appropriateness of any model used. To the extent that the price provided by internal models does not represent the fair value of the financial instrument, management makes adjustments to the model valuation to calibrate it to other available pricing sources. Where unobservable inputs are used, management may determine a range of possible valuations based upon differing stress scenarios to determine the sensitivity associated with the valuation. As a final step, management considers the need for further adjustments to the modeled price to reflect how market participants would price the financial instrument.

#### Fair Value Hierarchy

Synovus determines the fair value of its financial instruments based on the fair value hierarchy established under ASC 820-10, which requires an entity to maximize the use of observable inputs and minimize the use of unobservable inputs when measuring fair value. A financial instrument's categorization within the valuation hierarchy is based upon the lowest level of input that is significant to the financial instrument's fair value measurement in its entirety. There are three levels of inputs that may be used to measure fair value. The three levels of inputs of the valuation hierarchy are defined below:

Quoted prices (unadjusted) in active markets for identical assets and liabilities for the instrument or security to be valued. I eval 1 evaluate include markets his equivily equivily

Level 1 to be valued. Level 1 assets include marketable equity securities as well as U.S. Treasury securities that are highly liquid and are actively traded in over-the-counter markets. Observable inputs other than Level 1 quoted prices, such as quoted prices for similar assets and liabilities in active markets, quoted prices in markets that are not active or model-based valuation techniques for which all significant assumptions are derived principally from or corroborated by observable market data. Level 2 assets and liabilities include debt securities with quoted prices that are traded less frequently than exchange-traded instruments and derivative contracts whose value is determined by using a pricing model

- Level 2 with inputs that are observable in the market or can be derived principally from or corroborated by observable market data. U.S. Government sponsored agency securities, mortgage-backed securities issued by U.S. Government sponsored enterprises and agencies, obligations of states and municipalities, collateralized mortgage obligations issued by U.S. Government sponsored enterprises, and mortgage loans held-for-sale are generally included in this category. Certain private equity investments that invest in publicly traded companies are also considered Level 2 assets.
- Level 3 Unobservable inputs that are supported by little, if any, market activity for the asset or liability. Level 3 assets and liabilities include financial instruments whose value is determined using pricing models, discounted cash flow models and similar techniques, and may also include the use of market prices of assets or liabilities that are not directly comparable to the subject asset or liability. These methods of

valuation may result in a significant portion of the fair value being derived from unobservable assumptions that reflect Synovus' own estimates for assumptions that market participants would use in pricing the asset or liability. This category primarily includes collateral-dependent impaired loans, other real estate, certain equity investments, and certain private equity investments.

#### Fair Value Option

Synovus has elected the fair value option for mortgage loans held for sale primarily to ease the operational burdens required to maintain hedge accounting for these loans. Synovus is still able to achieve effective economic hedges on mortgage loans held for sale without the operational time and expense needed to manage a hedge accounting program.

Valuation Methodology by Product

Following is a description of the valuation methodologies used for the major categories of financial assets and liabilities measured at fair value.

Trading Account Assets and Investment Securities Available-for-Sale

The fair values of trading securities and investment securities available for sale are primarily based on actively traded markets where prices are based on either quoted market prices or observed transactions. Management employs independent third-party pricing services to provide fair value estimates for Synovus' investment securities available for sale and trading securities. Fair values for fixed income investment securities are typically determined based upon quoted market prices, broker/dealer quotations for identical or similar securities, and/or inputs that are observable in the market, either directly or indirectly, for substantially similar securities. Level 1 securities, and mutual fund investments. Level 2 securities are typically matrix priced by the third-party pricing service to calculate the fair value. Such fair value measurements consider observable data such as relevant broker/dealer quotes, market spreads, cash flows, yield curves, live trading levels, trade execution data, market consensus prepayments speeds, credit information, and the respective terms and conditions for debt instruments. The types of securities classified as Level 2 within the valuation hierarchy primarily consist of collateralized mortgage obligations, mortgage-backed securities, debt securities of U.S. Government-sponsored enterprises and agencies, corporate debt, and state and municipal securities.

When there is limited activity or less transparency around inputs to valuation, Synovus develops valuations based on assumptions that are not readily observable in the marketplace; these securities are classified as Level 3 within the valuation hierarchy. The majority of the balance of Level 3 investment securities available for sale consists primarily of trust preferred securities issued by financial institutions. Synovus also carries non-marketable common equity securities within this category. Synovus accounts for the non-marketable common equity securities in accordance with ASC 325-20, which requires these investments to be carried at cost. To determine the fair value of the trust preferred securities, management uses a measurement technique to reflect one that utilizes credit spreads and/or credit indices available from a third-party pricing service. In addition, for each trust preferred security, management projects non-credit adjusted cash flows, and discounts those cash flows to net present value incorporating a relevant credit spread in the discount rate. Other inputs to calculating fair value include potential discounts for lack of marketability. Management uses various validation procedures to confirm the prices received from pricing services and quotations received from dealers are reasonable. Such validation procedures include reference to relevant broker/dealer quotes or other market quotes and a review of valuations and trade activity of comparable securities. Consideration is given to the nature of the quotes (e.g., indicative or firm) and the relationship of recently evidenced market activity to the prices provided by the third-party pricing service. Further, management also employs the services of an additional independent pricing firm as a means to verify and confirm the fair values of the primary independent pricing firms. Mortgage Loans Held for Sale

Synovus elected to apply the fair value option for mortgage loans originated with the intent to sell to investors. When quoted market prices are not available, fair value is derived from a hypothetical bulk sale model used to estimate the exit price of the loans in a loan sale. The bid pricing convention is used for loan pricing for similar assets. The valuation model is based upon forward settlements of a pool of loans of identical coupon, maturity, product, and credit attributes. The inputs to the model are continuously updated with available market and historical data. As the loans are sold in the secondary market and predominantly used as collateral for securitizations, the valuation model represents the highest and best use of the loans in Synovus' principal market. Mortgage loans held for sale are classified within Level 2 of the valuation hierarchy.

#### Private Equity Investments

Private equity investments consist primarily of equity method investments in venture capital funds, which are primarily classified as Level 3 within the valuation hierarchy. The valuation of these investments requires significant management judgment due to the absence of quoted market prices, inherent lack of liquidity, and the long-term nature of such assets. Based on these factors, the ultimate realizable value of these investments could differ significantly from the value reflected in the accompanying unaudited interim consolidated financial statements. For ownership in

publicly traded companies held in the funds, valuation is based on the closing market price at the balance sheet date, and the valuation of marketable securities that have market restrictions is discounted until the securities can be freely traded. The private equity investments in which Synovus holds a limited partner interest consist of funds that invest in privately held companies. For privately held companies in the funds, the general partner estimates the fair value of the company in accordance with GAAP as clarified by ASC 820 and guidance specific to investment companies. The estimated fair value of the company is the estimated fair value as an exit price the fund would receive if it were to sell the company in the marketplace. The fair value of the fund's underlying investments is estimated through the use of valuation models such as option pricing or a discounted cash flow model. Valuation factors, such as a company's operational performance against budget or milestones, last price paid by investors, with consideration given on whether financing is provided

by insiders or unrelated new investors, public market comparables, liquidity of the market, industry and economic trends, and change of management or key personnel, are used in the determination of fair value.

Also, Synovus holds an interest in an investment fund that invests in publicly traded financial services companies. Although the fund holds investments in publicly traded entities, the fair value of this investment is classified as Level 2 in the valuation hierarchy because there is no actively traded market for the fund itself, and the value of the investment is based on the aggregate fair value of the publicly traded companies that are held in the fund for investment.

Investments Held in Rabbi Trusts

The investments held in Rabbi Trusts primarily include mutual funds that invest in equity and fixed income securities. Shares of mutual funds are valued based on quoted market prices, and are therefore classified within Level 1 of the fair value hierarchy.

Salary Stock Units

Salary stock units represent fully vested stock awards that have been granted to certain key employees of Synovus. The salary stock units are classified as liabilities and are settled in cash, as determined by the closing Common Stock price on the date of settlement and the number of salary stock units being settled. Accordingly, salary stock units are classified as Level 1 within the fair value hierarchy.

Derivative Assets and Liabilities

As part of its overall interest rate risk management activities, Synovus utilizes derivative instruments to manage its exposure to various types of interest rate risk. With the exception of one derivative contract discussed herein, Synovus' derivative financial instruments are all Level 2 financial instruments. The majority of derivatives entered into by Synovus are executed over-the-counter and consist of interest rate swaps. The fair values of these derivative instruments are determined based on an internally developed model that uses readily observable market data, as quoted market prices are not available for these instruments. The valuation models and inputs depend on the type of derivative and the nature of the underlying instrument, and include interest rates, prices and indices to generate continuous yield or pricing curves, volatility factors, and customer credit related adjustments. The principal techniques used to model the value of these instruments are an income approach, discounted cash flows, Black-Scholes or binomial pricing models. The sale of TBA mortgage-backed securities for current month delivery or in the future and the purchase of option contracts of similar duration are derivatives utilized by Synovus' mortgage banking subsidiary, and are valued by obtaining prices directly from dealers in the form of quotes for identical securities or options using a bid pricing convention with a spread between bid and offer quotations. Interest rate swaps, floors, caps and collars, and TBA mortgage-backed securities are classified as Level 2 within the valuation hierarchy.

Synovus' mortgage banking subsidiary enters into interest rate lock commitments related to expected funding of residential mortgage loans at specified times in the future. Interest rate lock commitments that relate to the origination of mortgage loans that will be held-for-sale are considered derivative instruments under applicable accounting guidance. As such, Synovus records its interest rate lock commitments and forward loan sales commitments at fair value, determined as the amount that would be required to settle each of these derivative financial instruments at the balance sheet date. In the normal course of business, the mortgage subsidiary enters into contractual interest rate lock commitments to extend credit, if approved, at a fixed interest rate and with fixed expiration dates. The commitments become effective when the borrowers "lock-in" a specified interest rate within the time frames established by the mortgage banking subsidiary. Market risk arises if interest rates move adversely between the time of the interest rate lock by the borrower and the sale date of the loan to an investor. To mitigate the effect of the interest rate risk inherent in providing interest rate lock commitments to borrowers, the mortgage banking subsidiary enters into best efforts forward sales contracts with third party investors. The forward sales contracts lock in a price for the sale of loans similar to the specific interest rate lock commitments. Both the interest rate lock commitments to the borrowers and the forward sales contracts to the investors that extend through to the date the loan may close are derivatives, and accordingly, are marked to fair value through earnings. In estimating the fair value of an interest rate lock commitment, Synovus assigns a probability to the interest rate lock commitment based on an expectation that it will be exercised and the loan will be funded. The fair value of the interest rate lock commitment is derived from the fair value of related mortgage loans, which is based on observable market data and includes the expected net future cash

flows related to servicing of the loans. The fair value of the interest rate lock commitment is also derived from inputs that include guarantee fees negotiated with the agencies and private investors, buy-up and buy-down values provided by the agencies and private investors, and interest rate spreads for the difference between retail and wholesale mortgage rates. Management also applies fall-out ratio assumptions for those interest rate lock commitments for which we do not close a mortgage loan. The fall-out ratio assumptions are based on the mortgage subsidiary's historical experience, conversion ratios for similar loan commitments, and market conditions. While fall-out tendencies are not exact predictions of which loans will or will not close, historical performance review of loan-level data provides the basis for determining the appropriate hedge ratios. In addition, on a periodic basis, the mortgage banking subsidiary performs analysis of actual rate lock fall-out experience to determine the sensitivity of the mortgage pipeline to interest rate changes from the date of the commitment through loan origination, and then period end, using applicable published mortgage-backed investment security prices. The expected fall-out ratios (or conversely the "pull-through" percentages) are applied to the determined fair value of the unclosed mortgage pipeline

in accordance with GAAP. Changes to the fair value of interest rate lock commitments are recognized based on interest rate changes, changes in the probability that the commitment will be exercised, and the passage of time. The fair value of the forward sales contracts to investors considers the market price movement of the same type of security between the trade date and the balance sheet date. These instruments are defined as Level 2 within the valuation hierarchy.

In November 2009, Synovus sold certain Visa Class B shares to another Visa USA member financial institution. The sales price was based on the Visa stock conversion ratio in effect at the time for conversion of Visa Class B shares to Visa Class A unrestricted shares at a future date. In conjunction with the sale, Synovus entered into a derivative contract with the purchaser (the Visa derivative), which provides for settlements between the parties based upon a change in the ratio for conversion of Visa Class B shares to Visa Class A shares. The fair value of the Visa derivative is determined based on management's estimate of the timing and amount of the Covered Litigation settlement, and the resulting payments due to the counterparty under the terms of the contract. Since this estimation requires application of judgment in developing significant unobservable inputs, this derivative has been classified as Level 3 within the valuation hierarchy.

Assets and Liabilities Measured at Fair Value on a Recurring Basis

The following table presents all financial instruments measured at fair value on a recurring basis as of March 31, 2014 and December 31, 2013, according to the valuation hierarchy included in ASC 820-10. For equity and debt securities, class was determined based on the nature and risks of the investments.

<sup>(1)</sup> Based on an analysis of the nature and risks of these investments, Synovus has determined that presenting these investments as a single asset class is appropriate.

<sup>(2)</sup> Mortgage derivatives consist of customer interest rate lock commitments that relate to the potential origination of mortgage loans, which would be classified as held for sale and forward loan sales commitments with third party investors.

Fair Value Option

The following table summarizes the difference between the fair value and the unpaid principal balance of mortgage loans held for sale measured at fair value and the changes in fair value of these loans. Mortgage loans held for sale are initially measured at fair value with subsequent changes in fair value recognized in earnings. Changes in fair value were recorded as a component of mortgage banking income in the consolidated statements of income. An immaterial portion of these changes in fair value was attributable to changes in instrument-specific credit risk. Changes in Fair Value Included in Net income

Fair value less aggregate unpaid principal balance	\$1,166	441

Changes in Level 3 Fair Value Measurements

As noted above, Synovus uses significant unobservable inputs (Level 3) in determining the fair value of assets and liabilities classified as Level 3 in the fair value hierarchy. The table below includes a roll-forward of the amounts on the consolidated balance sheet for the three months ended March 31, 2014 and 2013 (including the change in fair value), for financial instruments of a material nature that are classified by Synovus within Level 3 of the fair value hierarchy and are measured at fair value on a recurring basis. Transfers between fair value levels are recognized at the end of the reporting period in which the associated changes in inputs occur. During the first quarter of 2014 and 2013, Synovus did not have any material transfers between levels in the fair value hierarchy.

Three Months Ended March 31,

gains (losses) relating to assets and								
liabilities still held at March 31,								

\* Included in earnings as a component of non-interest income (expense).

Assets Measured at Fair Value on a Non-recurring Basis

From time to time, certain assets may be recorded at fair value on a non-recurring basis. These non-recurring fair value adjustments typically are a result of the application of lower of cost or fair value accounting or a write-down occurring during the period. For example, if the fair value of an asset in these categories falls below its cost basis, it is considered to be at fair value at the end of the period of the adjustment. The following table presents assets measured at fair value on a non-recurring basis as of the dates indicated for which there was a fair value adjustment during the period, according to the valuation hierarchy included in ASC 820-10.
