Form 6-K  
April 09, 2014

---

FORM 6-K  
SECURITIES AND EXCHANGE COMMISSION  
Washington, D.C. 20549

Report of Foreign Issuer

Pursuant to Rule 13a-16 or 15d-16  
of the Securities Exchange Act of 1934

For the month of April 2014

Commission File Number: 001-15152

SYNGENTA AG  
(Translation of registrant's name into English)

Schwarzwaldallee 215  
4058 Basel  
Switzerland  
(Address of principal executive offices)

Indicate by check mark whether the registrant files or will file annual reports under cover of Form 20-F or Form 40-F:

Form X    Form  
20-F    40-F

Indicate by check mark if the registrant is submitting the Form 6-K in paper as permitted by Regulation S-T Rule 101(b)(1):

Yes    No X

Indicate by check mark if the registrant is submitting the Form 6-K in paper as permitted by Regulation S-T Rule 101(b)(7):

Yes    No X

Indicate by check mark whether by furnishing the information contained in this Form, the Registrant is also thereby furnishing the information to the Commission pursuant to Rule 12g3-2(b) under the Securities Exchange Act of 1934:

Yes    No X

If "Yes" is marked, indicate below the file number assigned to the registrant in connection with Rule 12g3-2(b): N/A

Syngenta in cellulosic fuel collaboration to increase ethanol plant productivity

- Collaboration to use new process to make cellulosic ethanol from corn kernel fiber
  - Technology to be marketed in combination with Enogen® corn
  - Ethanol yield per bushel of corn expected to increase substantially

Syngenta announced today an agreement with Cellulosic Ethanol Technologies, LLC to license its ACE (Adding Cellulosic Ethanol) technology, a new process for ethanol plants. ACE technology has been shown to significantly increase a plant's ethanol production while delivering other benefits such as increased corn oil production and higher protein content in Dried Distillers Grains (DDGs), an ethanol by-product used for animal feed.

In combination with Syngenta's proprietary Enogen corn trait, ACE technology allows the fiber as well as the starch in a corn kernel to be converted into ethanol. Enogen is the only corn output trait designed specifically to enhance ethanol production. It is expected that the ACE-Enogen® offer will enable ethanol plants to make further progress in reducing natural gas usage and increasing ethanol throughput, thereby improving their carbon footprint.

Davor Pisk, COO of Syngenta, said: "The adoption of Enogen in ethanol plants is accelerating, with six commercial contracts signed. The introduction of ACE technology will further drive growth. It has the potential to improve substantially both the profitability and sustainability of ethanol plants, enabling them to produce more energy with fewer resources."

Cellulosic Ethanol Technologies, LLC, is a subsidiary of Quad County Corn Processors (QCCP). Use of the ACE technology is scheduled to begin at QCCP's ethanol plant in Galva, Iowa in May 2014.

Delayne Johnson, CEO of QCCP, said: "The combination of ACE technology and Enogen corn is expected to generate significant synergies when used together in dry grind ethanol plants. This launch represents a major advance in the production of cellulosic ethanol."
